We have what might be termed an inactive foul-brood law. The county commissioners of the various counties of the State are supposed to appoint an inspector who is to receive two dollars a day and no expenses, and the inspector is to collect his fee from the owner of the bees. How a man can cover a county on a team hire of two dollars a day is a mystery. We expect to take this matter up with the next legislature, and try to get sufficient money to make the law a real law.

Lincoln, Neb., Oct. 10.

H. W. JEFFRIES.

[The following is a part of the extract from the *Nebraska State Journal* referred to:]

The government proclamation, issued when it was originally decided to open the North Platte forest reserve to homesteading did not promise much for the settler in this region. Some Lincoln men who intend to file for claims say, however, that they have no choice between the Fort Niobrara land and the North Platte reserve land. Two-thirds of the North Platte reserve land is not the best for farming; but the adaptation of sweet clover for cattle feed recently demonstrated, has led many to say that they would like to try the North Platte land. This land, they say, will grow an abundance of sweet clover where even alfalfa would not grow.

"WHAT TO DO WITH ALFALFA WHEN YOU GET IT."

The above is the title of a most valuable and interesting article in the *Ohio Farmer* for August 30. In fact, that article alone ought to be worth to almost every farmer the subscription price to the *Ohio Farmer* several times over—that is, 50 cents a year. See the following extract:

I have been a good deal interested and somewhat amused to see the efforts now being made to cause everybody to grow alfalfa upon every farm. Of course I know that everybody can grow it, and I am sure also that everybody would be profited if he would grow it; but also I know full well that many a man will succeed in getting a stand of alfalfa and will fail with it after he has gotten it. There is not a doubt in the world that alfalfa will pay. Take this year of drouth. Suppose a man gets only two tons to the acre—which we exceeded at our first cutting. If the hay is well made, that is equal in feeding value to corn, pound for pound.

What do you think of that? Alfalfa *hay* worth as much as corn, *pound for pound!**

* By the way, if a pound of alfalfa hay is worth as much as a pound of corn, how about alfalfa for chicken feed? You see there would be no harvesting

Now, one important part of the alfalfa business—at least to beekeepers—is the bloom. See the following:

It must always be allowed to attain a sufficient maturity so that the little shoots are starting at the base of the stems. If it is cut before this time it is greatly damaged, and the later crops of hay will fall far short of perfection. Hundreds of fields of alfalfa in Ohio have been plowed up in disgust because men simply cut them too early, and in this way stunted and diseased their plants.

Of course, friend Wing does not say the alfalfa should be permitted to come in bloom before cutting it for hay, but it tends in that direction. I believe it is generally understood that alfalfa is not worth very much to beekeepers unless it is grown for the seed. One of the greatest crops of honey I ever saw in one locality was from the alfalfa fields of York State; but as those fields were a perfect mass of bloom over hill and vale, I presume they were growing it for the seed. I think it will pay not only to read but to study the whole article. I hardly need tell you that there is no better authority on growing alfalfa than W. O. Wing.

I am glad you are hammering away at the bad things in this world. Note the enclosed clipping. We are going to vote on that bill. Dr. Owens-Adair is an elderly woman. I have known her for 25 years, and she always stood for clean things.

Necanicum, Ore.

HERMAN AHLERS.

AUTHOR OF NEW LAW DEFENDS IT; STERILIZATION A BENIGN AND HARMLESS TREATMENT OF UNDESIRABLES.

Sterilization is little understood, and many will vote against the bill, believing it to be a harsh and inhuman measure, when in reality there could be no more humane remedy for the protection of the unborn children and for the purification and perpetuation of our nation. Senator Day said when he voted for my bill: "This bill can hurt no one, therefore I vote yes."

It is shown by statistics that insanity is increasing 3 per cent faster than the population of our country. It was claimed by a physician who addressed a meeting called by the prominent men of science to discuss the social-evil question that 50 per cent of all the boys and men of the United States were afflicted with venereal diseases. Is not that enough to make the people stop and reflect? Where will we stand 100 years from now if these terrible conditions are not changed?

In 1907, when I barely succeeded in getting my

nor hay-making. The chickens will attend to that part of it. Of course the green leaves are not worth as much in weight as dried hay; but in Florida, California, and other places where corn is away up, have we fully demonstrated the value of alfalfa for chickens? If it has to be sowed every year on account of its not standing the wet hot summers in Florida, will it not pay even then? And I notice by the Florida papers that they are succeeding in many places in getting alfalfa to make a stand through the summer as well as through the winter. Just one thing more along this line. In the West, turkeys are grown and fattened by the carload on alfalfa and nothing else. Can anybody tell us more about feeding chickens alfalfa? and can we get at least a fair amount of eggs without any grain whatever? What is to hinder having an alfalfa egg-farm?

bill introduced in the House by four brave young men, it was greeted with coarse laughter and coarser jests. What wonderful changes have come during those few short years! Sterilization has aroused the thinking people to thought and action. They are reaching out in all directions to find methods to check the evils that are threatening our nation. Sterilization stands at the head. It is radical, for it cuts off the contaminating source and the propagating source of the undesirable. It is benign, and it is harmless. The people may veto it, as did Governor Chamberlain in 1909, but they can not kill it, for it will come forth with renewed strength as it did before. In time it will be acknowledged to be the saving factor of this great problem.

DR. OWEN ADAIR.

MOSQUITOES—A SUGGESTION IN REGARD TO FENCING THEM OUT OF OUR HOMES.

Mr. Root:—In reading over your four objectionable features as regards Florida in the winter, I notice the mosquito seems to bother a good deal; and knowing a way that mosquitoes get into your houses that most people overlook I want to tell you. In the day time they retreat down the chimney; and when you light up the house at night, instead of going back out at the top they come inside. A great many will come in this way; and to remedy it just screen the mouth of the chimney.

Memphis, Tenn., Sept. 9.

W. E. DRANE.

Friend D., I presume you have explained exactly how mosquitoes get into our Florida home when Mrs. Root is sure every thing is carefully screened from garret to cellar. We are troubled with them only occasionally in our locality. But several times we have been wondering how some pretty good-sized ones could possibly have crawled in during the night.

FLORIDA AS A PLACE FOR BEEKEEPERS, ETC.

I have been reading a copy of GLEANINGS you sent me some time ago, and have been doing considerable thinking along the line of beekeeping. It seems to me this would be an ideal country for bees. There are but few in the country. Those that are here are doing well with no attention whatever. The best honey-producer we have here in these hills is the partridge pea. Hundreds of acres of this hill land are covered with this pea, which grows to a height of three feet in many places, and produces honey from early in the spring until late in the winter—usually about nine months in the year. The bees do not get the honey from the blossom of the partridge pea. There is a small cup or nodule, near the base of each leaf, from which the honey is gathered. There are also many other wild flowers from which honey could be gathered.

These hill lands, being a red clay loam, produce much better than the flat sandy lands of Florida. Citrus fruits are at home here, and the flavor is much better than that of the fruits grown on the flat lands. The water in these hills is pure freestone. We have no malaria; mosquitoes are not troublesome at any time of the year. The past summer the mercury never went above 93 degrees, and only once that high. In my garden are lima beans which were planted the summer of 1912 still producing beans, and apparently are growing as well as ever. They had no protection whatever last winter.

I will willingly answer any questions beekeepers or others may want to ask regarding this country.

I am not a land agent nor any thing of the kind; but I am a *booster* for this country. My native land is Shenandoah Valley, or Virginia—a good old country; but now I am a "Florida Cracker."

Greer, Fla., Oct. 16.

G. R. COVERSTON.

As the writer of the above is a "booster" for his locality, perhaps we should take it with a little allowance. Although he is located not very far from our Florida home, I think he overestimates the partridge pea. I know we get some honey from it, and it may be much more plentiful in his locality; but bees in Florida, if I am correct, have quite a good many poor seasons for honey. His statements in regard to the temperature are about the same as with us, and I have already mentioned that lima beans as well as much other garden stuff frequently bear the second year, especially if we have rain, and no killing frosts for quite a long period.

HONEY CURED WHEN ALL DOCTORS FAILED.

The last of June a colored girl four years old got hold of a box of potash, and ate some of it. A doctor was called in, and he prescribed for her, but she grew worse all the time. Her parents carried her to Montgomery, 24 miles away. This was the last of July. The doctors there said nothing would do her any good but an operation. Her parents were not able to stand the cost, so they brought the girl back. But she soon got to a point where she could not eat any thing. Then they carried her back to Montgomery, where the doctors performed an operation. She stayed there three weeks without eating any thing. They told her parents they had done all they could for her, and told them to take her home if she were able to get there; but they thought death would be the result, as she had "grown up inside," and nothing could enter the bowels. I was on my way to Montgomery, and met them at Pike Road, Ala., my station. They then told me about the child. I looked at her and was very sorry for her. I had known her parents a long time; so when I returned home I asked if the child was still alive. They said she was. I sent them some of my honey, and sent word to the parents to give the child as much as she wanted. She could not eat it at first, but it tasted good to her. At the third trial they said she did swallow some of the honey, and that was the first thing she had swallowed in three weeks. They say it was a sight to see how she improved at once. After she ate a spoonful or two more she drank some milk, and now she can go from house to house, and is doing well. She has had no medicine since except honey. A doctor stated to me that if she had had honey at first the poison would not have done her any harm.

Mathews, Ala., Sept. 8.

N. S. NORDAN.

The above is interesting because it corroborates what we have heard many times, that milk and honey are nature's remedies. You remember that when the children of Israel were wandering in the wilderness they were repeatedly cheered by the promise that if they would obey the Lord they would enter "a land flowing with milk and honey;" and the above plaintive letter tells us that milk and honey really succeeded after the doctors and surgeons with all their skill had failed.

Temperance

GOD'S KINGDOM COMING.

We notice by the *Cleveland Plain Dealer* of October 24 that the great manufacturers of our land are waking up to the need of getting rid of the saloons that so often crowd close up to places where great numbers of people are employed. I have made three clippings from the article.

Cleveland is to be the center of a national movement for legislation forbidding saloons within certain distances of industrial plants, particularly foundries.

Below is what the chairman of one of the Cleveland committees declared:

The Clevelanders will appoint as members of his committee one man from each State in the United States. Central headquarters and the directing power of the movement will be here.

"Despite all liability laws and 'safety first' efforts, manufacturers continue to let saloons do business next door to their offices.

"A man slips out for a moment or two, and goes back to work.

"No one knows he's half loaded, but may be he'll get hold of a crane, or ladle of molten iron; there's an accident, and not only he but several others are injured.

"It seems to me this question of the saloon ought to be made a national issue, that the saloon ought to be driven away from the manufacturer's door."

And the clipping below tells us what the *Iron Trade Review* has to say in regard to the matter:

When saloons are located within a few feet of a foundry, it is possible for the workmen to slip out from time to time, fill up on beer, and return to work in a short time.

Of course, brains are muddled. The result is not only poor work, but frequently serious accidents.

For years I have wondered why more of our manufacturing establishments did not take greater pains to keep their men away from drink. Perhaps I might say to our readers that of late the city of Cleveland has been instituting safety committees who make it their business to see what can be done in the way of preventing accidents, both near factories and on our streets; and, as I understand it, the above measures are largely the outcome of this "safety" organization.

A KIND WORD FROM WESTERN AUSTRALIA.

I am a teetotaler myself, but used to be a moderate drinker. I was born and brought up in South Australia, in the famous wine-growing districts of Sanunda and Angaston. The majority of the people there drink wines; everybody thinks it is good for one to drink light wines. When I was twenty years of age there was a big rush to the golden West. Rich gold fields had been discovered, people flocked to these places, and eatables went up to enormous prices, so there were big opportunities for agriculturists. Land could be had from the government for almost nothing, so I was tempted to try my luck on the land in West Australia; but it wasn't quite so easy as I first imagined. I didn't have much capital; and as every thing was dear I had to be very economical if I was going to make a success on the land, and had to give up all luxuries. Then I was determined to get on. Intoxicating liquors were also

very dear, so I gave them up; and after being without them for a time I found I could work just as well, and at the same time it was a big saving.

After I had been here three years, being interested in bees I subscribed for *GLEANINGS*, and I may say I was quite delighted with your *Home* chat. It also gave me more encouragement to stay a teetotaler. I might also mention that I am not a smoker, for this has always appeared to me as being a dirty, filthy habit. I have had a lot of lads working for me at different times, and I have been able to get the majority of them interested in your *Home* talks. Although they read no other part of *GLEANINGS*, they always look forward to it when it comes, to see what you have to say.

There are great changes taking place in Australia toward banishing the saloons, and there is not nearly as much drunkenness as there used to be.

There is one important thing I have often wondered at, and that is that the progressive Yankee has not given his women votes long before this. I see that they are starting it in some of the States. Tell your friends that it has long passed the experimental stage in Australia, and that there isn't an Australian who thinks that woman shouldn't have votes. In fact, every Australian is proud of it.

I have followed your diet talks up, but differ with you in some respects. I used to suffer from indigestion very badly, but have cured myself by dieting. If it would interest you I will tell you how I did it. I might mention that apples are my main medicine.

E. J. HAESE.

Mount Barker, Western Australia, April 30.

Thanks for your kind words, my good friend; and if you have any thing more to tell us about apples as a diet, please let us have it. Just now I am having my choice of the most beautiful apples produced, and I have said several times that I would not exchange my apple supper at five o'clock every day for the biggest and most elaborate meal that any of our great cities can furnish; and, best of all, my apple supper leaves no bad taste when I go to bed or when I get up. Just now I am feeling happy over my Winesap apples that a good friend sent me. They are of a deep red, some portions being almost black on the outside; and this beautiful tint goes through the skin to the snow-white flesh within. Indeed, I have been told that the Winesap is a seedling of the "famous" Snow apple (Fameuse).

WOMAN SUFFRAGE.

There has been an attempt made by the brewers to persuade people that woman suffrage has but little effect on the wet and dry question. See the following, which I clip from the *Home and State*:

WHERE WOMEN VOTE.

California—Two years ago, 200 dry towns; today, 675.

Wyoming—Before woman suffrage, all wet; now, 90 per cent dry.

Utah—In election of 1911, 110 cities went dry, 18 cities went wet; every county but one is dry.

NO. 24

Editorial

WE wish all a merry Christmas.

OUR English correspondent, Mr. John Smallwood, page 885, writes very interestingly of the links that bind together the two English-speaking nations.

WE would call particular attention to the article, p. 892, by Miss McIntyre, the young lady who helped to pay her way through college with money she earned with her bees.

THE FOOD VALUE OF HONEY.

IN the table found on page 904 it will be seen that honey has a high food value as compared with oysters, eggs, and beef. Honey salesmen do not, as a rule, play this tune strong enough. They should make it clear that honey is not only a high-class condiment easily assimilated, much more so than other sugars, but a food that will make brain and muscle. If carbohydrates are a necessary part of our diet let us emphasize the wholesomeness and cheapness of honey to supply this need.

BARSTOW TWO-SHAKINGS TREATMENT FOR FOUL BROOD.

W. H. BARSTOW, in this issue, gives a very unique and simple method for practicing two shakings for the cure of foul brood. We never found more than one shaking necessary for American foul brood; but to be on the safe side we shall do well to practice the double shaking. The plan offered by Mr. B. eliminates all possible danger of contamination of brood-frames, and saves a large amount of work.

OUR INDEX FOR 1913.

THE reader will not fail to notice the full index that appears in this issue. It contains 1920 references, besides illustrations and list of contributors. From it one can get an idea of the vast amount of valuable matter that has been given in these columns during the past year. The up-to-date beekeeper will, of course, preserve it that he

may take up some of the discussions that have occurred during the past year, which discussions he was compelled to go over hastily during the busy time of the year. These long winter evenings will enable him to get very much more of value out of his journals if he will make an intelligent use of the index.

WHEN TO CUT ALFALFA.

THE western beekeepers will be particularly interested in the discussion in this issue on the time to cut alfalfa. There has been a fear that the tendency was to cut before the plant comes into bloom, and this would mean a reduction in the amount of alfalfa honey. But, apparently, we have not as much to fear as we supposed. As a matter of fact we are told that those who believe in early cutting are, as a general rule, behind time. Early cutting may do a little better for dairy purposes, but there is no advantage in doing so in the production of hay for horses and mules. In the language of the Utah Experiment Station, "To insure a large yield of dry ripe hay and the largest amount of albumen, lucern (alfalfa) should be cut not earlier than in medium bloom. . . It will be a more serious error to cut too early than to cut too late."

THE NEW YORK STATE BEEKEEPERS' CONVENTION AT ROCHESTER.

ONE of the most flourishing organizations of beekeepers in the United States is the New York State Association of Beekeepers' Societies. This organization, as its name indicates, is made up of a number of affiliated county societies. Its general scheme of affiliation of smaller bodies is similar to that of the National Beekeepers' Association.

New York is one of the very best honey-producing States in the Union; but bee disease for a few years back, especially European foul brood, has made serious inroads on the honey business. But, thanks to this splendid organization, and the co-operation of the Agricultural Department of the State through its four efficient foul-

brood inspectors, both European and American foul brood have been brought largely under control. The inroads of these diseases have eliminated to a great extent the farmer who kept a few skeps of black bees; but the large producers—that is, those who make beekeeping a business and the small beekeepers who are keeping up with the times—are as much in evidence as ever.

We found a large and enthusiastic convention at Rochester, Dec. 2 and 3. In point of attendance it probably surpassed any similar meeting this year in the United States. The discussions were practical, interesting, and lively. In our next issue we hope to give a brief digest of the proceedings.

THAT CARLOAD OF BEES SHIPPED TO FLORIDA; HOW THEY ARE PROGRESSING.

THE latest advices from our apiarist, Mr. J. E. Marchant, at Apalachicola, showed that the bees were doing finely. The weather has been extremely mild, and the bees have been gathering natural pollen, and are rearing brood at a rapid rate. No honey is coming in, however; but we are feeding to keep the bees on the boom. Mr. Marchant appears to be very enthusiastic about the way things are moving, for he is very anxious to have the project prove out a success. A further examination showed that three colonies were dead, and 25 weak. The rest, however, are in good condition, making in all 273 fair colonies on arrival, and 25 weak ones.

But one must not imagine that traveling down south with a carload of bees in a fruit-car is like traveling in a Pullman. It is far from that. Mr. Marchant writes that he secured but little sleep; in fact, he had to be up with the bees almost night and day. In the midst of the trip some of the staging broke down, and he had to stop and take out over a hundred hives, make repairs, and load the bees on again. The extremely warm weather during which the bees were moving made his trip a peculiarly hard one; but, as we said in our last issue, all is well that ends well.

If our bees continue to gather natural pollen, there will be no doubt as to our ability to make a fine increase, and that is what we are after. If we get a crop of honey in addition, from tupelo, we shall consider ourselves as so much ahead.

A great deal of interest has been aroused among the beekeeping fraternity, and they are watching this experiment with not a little interest. In the mean time, the bees up north are breeding finely—so much so that there will be danger of starvation un-

less the beekeeper himself keeps close tab on his stores.

DON'T LET YOUR BEES STARVE; OUR HARD- CANDY FEEDING DURING MIDWINTER.

OUR Mr. Mel Pritchard, the man who raised over 3000 queens last season, is wintering some colonies outdoors on dry combs with a little pollen with no other stores than slabs of hard candy. Brood-rearing is going on at a rapid pace with these colonies. There will be no danger of starvation, because it is very easy to determine whether the bees have sufficient stores by lifting the packing over the brood-nest. One advantage of the candy is that it is a concentrated food, and that it can be so easily renewed. But its chief advantage lies in the fact that the bees are directly under their food supply, and can not starve. In case of combs filled with stores, the bees are liable to eat away a space, leaving themselves an inch or two away from the main supply, and during a cold snap will starve. This can not take place with candy. A full set of photos and further particulars will be given later.

But, to return to the Florida bees. Mr. Marchant has taken a number of fine snap shots, and is preparing to write up his experiments for GLEANINGS.

E. R. Root expects to visit the Apalachicola section about the last of January. H. H. Root, after E. R. returns, will then go down and assist in extracting during March or April.

Later.—Another blizzard of snow has hit us again. Our men are out with team and sled to bring two of our outyards of bees in that we did not take down to Florida. Snow closes the entrances while the bees are being hauled. On arrival they will be loaded in our bee-cellar under the big warehouse.

THE GRAND OLD MAN OF BEEDOM; HIS RECORD- BREAKING YIELD OF COMB HONEY.

DR. C. C. MILLER, of Marengo, Ill., comes nearer being the "Grand Old Man of Beedom" than perhaps any other one we could name. There are other men in the ranks who are as old as he (82 years young), but none who have kept *continuously* at the production of honey for over fifty years. To cap the climax of his useful career he secured a crop of comb honey this year which for a general average per colony is a record-breaker. See his report in this issue of Straws. If there is any other man in the United States or Canada who has secured an average of 266 lbs. of *comb* honey from as

many as 73 colonies, we do not know of him. That means almost a carload.

For fifty years we have listened to the counsel and advice of this sage of Marengo. That he is orthodox in his teachings, there has never been any question. If there had been, it would have been immediately dispelled by the knowledge of his remarkable yields of honey covering a period of many years, and the quality of his production. Said one of the largest buyers of comb honey in New York, "Dr. Miller's honey is always fine; and, what is more, it is always graded honestly." Indeed, if we mistake not, his crops have been contracted for and sold some seasons even before they were produced.

Beautiful in spirit, with an ever abiding faith in God, his sentences, even from the printed page, almost sparkle with the good will that flows out from the man. One is prepared to love him, even before he sees him; but when one meets him and talks with him face to face he realizes that, while the printed page reveals much, it does not show all of the kindly spirit back of "the smile that won't come off."

Dr. E. F. Phillips, of the Bureau of Entomology, Washington, D. C., a year ago this winter, desiring to get some data on the subject of wintering, visited Dr. Miller. On his way back he stopped at Medina. Said he, "Mr. Root, you have said a good deal in praise of Dr. Miller. He deserves it all. He is certainly a grand old man."

If there is any one else on this continent who can dispute Dr. Miller's claim to the title of "Grand Old Man of Beedom," we have never had the pleasure of his acquaintance.

Some years ago we read the book, "Ten Acres Enough," and it was enough to support a big family. We hear much nowadays about "more bees." What is the matter of making a few bees do more? Now comes Dr. Miller who might write a book on "Seventy-three Colonies Enough." If he did, he would talk about greater efficiency than we are practicing, perhaps.

THE HAND SYSTEM OF PRODUCING COMB HONEY IN SECTIONS.

REFERRING to our editorial on page 791, in regard to the system described by Mr. Hand on page 805, the latter writes as follows:

I thank you for the fair and impartial manner in which you reviewed the points in my section-honey system in the editorial department. There are two points, however, that I should like to have mentioned in another editorial. First, you say, "When bees start to draw out foundation they also begin to store nectar in it at the same time." I think you are

mistaken here; for as a result of quite extensive observation I have found that $\frac{1}{4}$ inch is the minimum depth of cells in which bees store nectar to any extent. Since such will be as readily accepted and give better results than deeper cells, this objection is not valid. Second, your statement that thin foundation has a disagreeable way of sagging and buckling in shallow frames calls to mind the fact that we do not use raw foundation for any purpose whatever—that is, foundation that has not been revamped by painting the surface with warm melted wax applied with a brush. If too hot the wax will flow into the cells and thicken the midrib; if just right it will adhere to the side walls, and build them up so as to resemble closely that which has been worked by the bees. It will not buckle; and those who have used it will attest to the eagerness with which bees accept it. Indeed, I'm not sure that it will not supplant drawn foundation in the spontaneous control of swarming; in which case all will be clear sailing.

Birmingham, Ohio, Nov. 21.

J. E. HAND.

Regarding the first sentence, when bees start to draw out foundation, much will depend on locality and the strength of the honey-flow. There are times when bees are prepared to jam in nectar as soon as the cells begin to be drawn out.

In regard to the second point, it would be our impression that the painting of the surface of the foundation with warm melted wax would eliminate the buckling and the stretching; but would it not leave a disagreeable midrib in the combs after it was drawn out and filled with honey? Perhaps a better plan would be to use a heavier grade of foundation to start with, thus making the midrib uniform throughout. One or two of our correspondents have said if we would use brood foundation in sections the bees would accept it much more readily than the ordinary thin super or the extra thin; that the midrib in the finished comb honey would not be nearly as pronounced as one would imagine. We tried it on a small scale this summer, and were surprised to find that this was so; indeed, if special attention had not been called to it we doubt if we would have noticed it.

RETROSPECT FOR 1913; SOME IMPORTANT APICULTURAL HAPPENINGS DURING THE YEAR.

As we look back over the year that is just closing, a number of notable things have happened in the bee world. First and foremost we are safe in saying that 1913 will go down in apicultural history as having given the largest crop of clover honey that has been known in a couple of decades. Notwithstanding there have been enormous sales and a great consumption of honey, immense quantities of extracted honey are stored seeking a market. This, naturally, has eased up prices a little. The emphatic lesson that comes to us all is that we should

develop our local markets, and not rush in more honey to the great commercial centers.

The year 1913 has seen extremes of weather conditions. While these extremes have been local they have been none the less record-breakers. First we had the Southern California freeze; then the floods in Nebraska and Ohio, and then the snow blizzard south of the Great Lakes. They all wrought fearful damage to property; but, fortunately, no great harm came to the bees.

The year 1913 has witnessed the enactment of an unusual amount of foul-brood legislation. Several States have passed new laws outright, and others have made important amendments to the old laws. Among the States that have had foul-brood legislation during 1913 of some sort may be mentioned the following: California, Connecticut, Idaho, Iowa, Minnesota, Michigan, Nevada, Pennsylvania, Texas, and Utah.

In the line of national legislation has come the enactment of a new tariff law by which the tariff on honey per gallon has been cut down from 20 cents to 10. This means a little less than a cent a pound. What effect this is going to have on the cheaper grades of honey in this country remains to be seen; but so far it has had no apparent effect. Parcel post came in with 1913, and it has come to stay. It is expected that there will be a general reduction of express rates to compete with parcel post. All this goes to help the beekeeper seeking to find a market for his product.

No important invention has been brought out during 1913; but a number of improvements have been made, not only in devices but in methods. Among the last mentioned we should unhesitatingly put to the forefront the Arthur C. Miller direct method of introducing queens with smoke—a method that practically insures the safe introduction of not only laying but of virgin queens. It is not only reliable, but saves from two to four days of valuable time. Reports from all over the United States from queen-breeders and honey-producers alike universally agree that this is one of the greatest tricks of the trade given in 1913.

Among improvements and inventions may be mentioned the Arthur F. Hodgson ventilated escape-board, described on page 577.

Great improvements have been made in shipping bees without combs. Combless packages of bees have been sent to many distant points in the United States by the use of water, and with the loss of only about a dozen bees to the pound. As there are about 4800 bees to the pound the percentage of loss is only $\frac{1}{4}$ of one per cent. But it should not be understood that *all* combless

packages of bees went through in good order. Some arrived at their destination with a loss of 75 per cent; but investigation has shown that in most cases, if not in all of them, the cause of death was due to a leakage in the water-container. At all events, when the bees arrived at their destination the water-bottles were entirely empty.

The other substantial improvements that have been made are in capping-melter machinery, honey-pumps, and power honey-extractors.

The tendency on the part of all large honey-producers has been decidedly toward the introduction of power machinery for taking honey off the hives. There is a reason for this, and that is the high cost of labor that often can not be secured at any price when it is the most needed. It is actually cheaper for the large honey-producer to pay interest and depreciation on his investment of machinery than to try to hire help which he can not get, or lose a substantial percentage of his crop.

There is another tendency; and that is, to make the production of honey a special line of business. While the backlotter is much more in evidence also, the careless, don't-read-the-bee-papers farmer class of beekeepers is being eliminated by bee disease. While the years 1910, 1911, and 1912 showed this process of elimination was going on, 1913 has seen the field in many cases turned over to the specialist. We can point to scores of places where this has occurred, especially where European foul brood has wiped black bees and their owners out of existence.

During the early part of 1913 the *Western Honey Bee*, published by the California State Beekeepers' Association, was started. Its purpose was to get the beekeepers of the Pacific coast in closer touch; and, apparently, it has succeeded in its mission. During this year, also, the *Canadian Bee Journal* was absorbed by the *Canadian Horticulturist*. The bee part of it is ably edited by the Provincial Apiarist, Prof. Pettit, at Guelph, Ont., Can.

Among the deaths of notable beekeepers that should be mentioned for 1913 is Oliver Foster, of Boulder, Col., who died March 12; Dan White, of New London, Ohio, who died June 2; Wm. McEvoy, of Woodburn, Ontario, and I. R. Good, of Marion, Ind., who died Oct. 5.

Thus, gradually, some of the brilliant lights in beedom are being snuffed out; and the few remaining that bridge the past to the present can nearly all be counted on the fingers of one's hand.

Stray Straws

DR. C. C. MILLER, Marengo, Ill.

GERMAN bee journals are telling about the Root Co. sending bees in wire-cloth cages, the food being in a tin can out of which the thick sugar-syrup flows drop by drop. Good German friends; that tin can contains only water, and the food is the usual queen-candy.

IN Europe it has for years been considered by many quite important to cage the old queen for a time, and then to introduce the new queen in the same cage. S. Cheatham's plan, p. 776, of half killing the old queen, and then putting her and the new queen in the same cage seems a modification of the European plan, and looks like an improvement.

ZANDER is quoted, *Bienen-Vater*, 251, as giving the following figures to show the great difference in consumption of stores caused by brood-rearing:

Dec., 150 grams (.33 lb.), no brood.
Jan., 700 grams (1.54 lb.), very little brood
Feb., 1100 grams (2.43 lb.), very little brood
Mar., 2100 grams (4.63 lb.), very little brood
Apr., 2900 grams (6.38 lb.) increasing brood

MR. BEGINNER, it may be that an entrance $\frac{3}{8}$ or $\frac{1}{2}$ inch deep in hot weather is all right for Frank McMurray, p. 819; but before settling down on that, do a little experimenting to see if an entrance two inches deep is not better for *you*. I'm pretty sure it is for me. [We have tried both wide and narrow entrances here at Medina, but very much prefer the former. In other words, Dr. Miller's experience is quite in line with ours.—ED.]

D. M. MACDONALD, *British Bee Journal*, 315, advises a change of queens when a colony daubs too much propolis on sections, and says: "It is curious how even the *same* bees desist under the benign influence of a new queen. One would not wonder at her own progeny ceasing to over-propolize, but that her presence should have a purifying influence on her predecessor's children is nothing short of a marvel." That's in line with my observation that, when the queen of a cross colony is replaced by a queen of gentle stock, the colony becomes gentle long before the progeny of the old queen have disappeared.

IN the multitude of discussion in the papers about the high cost of living there is much testimony to the effect that the producer of fruits, vegetables, etc., does as well as the average, or better, if he gets 30 per cent of what the consumer pays. How is it with the beekeeper? If his honey is sold

on commission at 16 cents, he will get somewhere around $13\frac{1}{2}$, after deduction for commission, freight, and drayage. The consumer will likely pay 25 cents a section, or near 30 cents a pound; $13\frac{1}{2}$ is 45 per cent of 30, and 45 per cent looks pretty good beside 30 per cent. So the beekeeper isn't as bad off as some others, is he?

DOES honey sell for its real value? Isn't there just as much nourishment and as much good taste in a pound of honey as in a pound of butter? And yet the dairyman gets twice as much for butter as the beekeeper gets for honey. On the other hand, the consumer can get four or five times as much sugar as honey for the same money. There's many a father whose child's health is being bankrupted by too free use of sugar, who would gladly pay 50 cents a pound for honey if he only knew that its substitution for sugar would save the health, perhaps the life, of his child. What can be done about it? Don't ask me.

MORLEY PETTIT says that in Ontario Province less than a fourth of the honey is comb; so the crop-report committee makes its report in terms of extracted, including comb, however, by counting one pound of comb as two of extracted, taking the cost of production into account, and thus the average of 63 pounds is reached. He prods us folks on this side the line just a bit for confusing the terms Ontario and Canada. Ontario is no more Canada than New York is United States. Quebec Province produces more section honey than extracted; but the Ontario Association has nothing to do with that Province, and speaks only for its own Province.

AFTER reading the well-given instruction for fastening wire in foundation, p. 799, some may still prefer to use the plan invented by Miss Emma M. Wilson, which she describes thus:

"After the foundation is put in place over the wire on the board, the whole thing is lifted off the board, and moved over the flame of a common gasoline-stove high enough not to melt the foundation, but to heat the wire enough to imbed it in the wax, letting the flame constantly follow the direction of the wire. The frame is moved with one hand, while the fingers of the other hand press very lightly over the foundation."

I think this makes a better job than the spur. The wire is hot while the wax remains cool, except where the wire melts it, and

the wire is so thoroughly imbedded that you would hardly know on which side it was. But this plan would hardly allow the wires to be curved.

I WONDER, Mr. Editor, if it will be too egotistical for me to take space here to tell what a good time I'm having in Washington, D. C. I left cousin Dave Redpath and his daughter Maggie to occupy the home, so that all care could be left behind; brought all my family, consisting of my wife and her sister, and for the first time in many a year I am giving myself up to the luxury of a vacation. With a thoroughly informed guide in the shape of an only son, we're doing the town and having the time of our lives. I supposed there was much to be seen and enjoyed in Washington, but I never dreamed how much; and they say "the half has not been told." I was heavily in debt before; but this adds greatly to the debt of gratitude I owe to the loving heavenly Father for his many, many loving kindnesses unto me.

REPLYING to ye editor, p. 822, bees paint the inside of a hive more or less with propolis; but is that exactly the same as having both inside and outside painted? At any rate, I've known the only painted hive in a cellar to be the only one having wet and moldy combs. [Paint inside and out might make a board more impervious to moisture than one coated inside only with bee-glue. Is it not possible that the wet moldy combs in that one painted hive to which you refer were due to some other conditions? We have for years used painted hives in wintering in one of our cellars, and we seldom have moldy combs in any of those hives. But in another cellar, a little cooler, the moisture and sweat are much more in evidence. If a powerful colony were housed in a painted hive, and a medium or weak colony in an unpainted one, we would naturally expect more moisture with the former than with the latter, and paint would not be the cause of it either. In other words, is it not possible that the one painted hive to which you refer had a stronger colony or a contracted entrance? or was it located in a part of the cellar that was cooler than where the other bees were situated?—Ed.]

HERE'S what the bees did for us the season of 1913: A dozen or so of the poorer colonies were allowed to work on extracting-combs. That left 72 for sections. The middle of May another colony was made from extra brood of the 72, making 73 that stored in sections. Close credit was given each colony for all sections it gave, whether finished or not. So a credit of 100 sections might mean 95 finished sections and enough

unfinished to be the equivalent of five finished. Note, too, that the credits are in sections, not pounds. The poorest colony gave 68 sections; the best gave 402 sections; the average for the 72 was 266.74.

Now don't ask me if there isn't some mistake in those figures. I've looked them over carefully, and they're all right. And then to think that an upstart of an editor should hint that I hadn't been giving "attention largely to honey-producers"! [This is almost a record-breaking yield of honey—nearly 20,000 lbs. of comb honey from 73 colonies. This is going some, especially for a man past 82 years of age. Of course, we know he had good help in his women-folks; but they are not as strong and active as they were 40 years ago. If any of our readers have produced as large a crop of comb honey from 75 or even 100 colonies we wish they would hold up their hands.]

We don't know what Dr. Miller is talking about, much less find the reference. Never mind; he secured a big crop; but, as he often modestly says, "I don't know." Yet what he does not know about producing comb honey is probably not worth much.—Ed.]

WE are told that, when a bee stings, it will circle about until it draws the sting out of the flesh, and escape unharmed. I think that's exceptional. Oftener it takes an immediate forcible departure, leaving its sting behind. But when it does perform the circling act, the sting does not always come out of the flesh. One day last summer a bee stung my hand; and as it began to circle I watched it. First it circled in one direction for a time, then in the other. Then it tried to fly away. Failing in that it fell to circling again, and directly took flight, leaving its sting in my hand. [In our public demonstrations we have caused bees to sting our arms and hands. This is done by picking a bee up by the wings and gently pressing it against the flesh of the arm until it inserts its sting. We then let go of the wings, and immediately it begins to tug away in an effort to free itself. Generally it will whirl in a circle. Sometimes it will whirl one way, and then back up and whirl the other way. But in dozens of cases when we have tried this, we have never known of an instance where it extracted its sting. When it does free itself it loses its sting and poison-bag, and sometimes a small section of the abdomen. Unlike that of the yellowjackets and hornets, the sting of the bee has barbs. These latter cause the sting to stick in the flesh. Thus a honeybee can use its weapon but once; but a yellowjacket or a hornet can keep on jabbing because its sting is not barbed.—Ed.]

SIFTINGS

J. E. CRANE, Middlebury, Vt.

J. L. Byer, page 670, Oct. 1, says: "For our locality 'bees always strong' is the only safe rule if best results are to be obtained." This is a pretty safe rule in most places if not everywhere.

* * *

On page 692, Oct. 1, in a footnote the editor says in regard to sac brood, "The only damage it does is to kill half a dozen or so of larvæ out of twenty-five or thirty thousand other individual larvæ in the hive." In my experience it is much more destructive than that. It is much worse some years than others. Perhaps the worst thing about it is that it is often mistaken by experienced beekeepers for foul brood, and the combs destroyed to get rid of it.

* * *

Mr. Chadwick is right, p. 519, as to the necessity of putting up honey in small packages if one wishes to secure the best price. Yet it seems doubtful whether it can be made to pay if the beekeeper can turn his time to profit at something else. "If fifty or a hundred leading producers could ship their honey to a central point to be graded, and put up in packages to suit the retail trade, this object could be accomplished and a neat profit could be turned into the pockets of the producers." Co-operation!

* * *

I appreciate what friend Doolittle says on page 710, Oct. 15, about difference in bees, especially in regard to temper. An inspector has a chance to learn about the disposition of bees as he goes from one yard to another, opening hives. I have found some as gentle as flies, and about as worthless, while others are as fierce and untamable as a tiger. I can't find words to describe their disagreeable disposition. It is the part of wisdom to get rid of such, and replace with such as can be handled, with care, with comfort.

* * *

P. C. Chadwick says, p. 600, Sept. 1, that both Mr. Foster and Byer condemn a record book where many bees are kept, and I believe they are right, especially in sections where there is much propolis, as I found years ago that I would get more or less propolis on the leaves, and they would soon stick together, and make a book a nuisance. Better by far a board five inches wide and four feet long. The number of the hives set near one edge and a set of signs as required set opposite each number.

Soft pine or basswood is best for such a record-board.

* * *

On page 707, Oct. 15, I mentioned sawing a slot into the end-bars for the wiring of frames. After seeing it, Mr. S. A. Niver, of Jamesville, Cal., wrote me of a device for piercing the end-bars where you have no machine with which to do it. He says he had some 10,000 end-bars cut out before reaching his present location, but had no machine to bore the holes for wires, and so set to work and made one. Here is his description: "Just a piece 2 x 6, about 6 feet long, with legs. Another piece of 2 x 6, about one foot long on top of the horse, sliding forward and back with the brads to punch the holes in the end-bars, fixed firmly to the sliding piece, which is worked by a lever bolted through the horse (as a fulcrum) and the sliding block. Just straddle the horse; put the foot on the lever, put an end-bar in the guide slot, and give a little kick; then you have three holes, nice and smooth. The motion is short and easy, and you have both hands to handle bars with, besides being seated. It beats boring, both in speed and good work. You are Yankee enough to get the idea and make one."

* * *

In a Straw on p. 705, Oct. 1, Dr. Miller tells of his failure to secure as satisfactory results in preventing swarming as others by raising his brood-chambers up on four blocks and thus giving an abundance of ventilation; and the editor, in a footnote, makes what seems to me a very significant statement. He says, "While you have been breeding toward non-swarmers, Mr. Burt has given his attention largely to honey-producers." Now, it has occurred to me that the surest way to produce non-swarmers may be to develop to the highest degree the honey-gathering instinct. If we develop one quality it is often at the expense of some other. The draft horse is not likely to be a fast road horse, or the fast horse a good draft animal. Our best dairy cows are not the ones the butcher selects for his use. One of the best cows I ever owned would be the last one would select for beef. The stronger the instinct for gathering honey is developed, the less will be the disposition to swarm, I believe. I have sometimes had colonies where the instinct for swarming was much stronger than that for honey-gathering, and if they could not swarm they would do nothing.

Beekeeping in California

P. C. CHADWICK, Redlands, Cal.

I believe much of my failure in direct introduction was due to the trouble I was having with robbers at the time. When a hive is opened long enough to allow the robbers to get in, there is going to be some trouble, and that trouble will fall on a strange queen as quickly as on a strange worker.

* * *

In the November issue of the *American Bee Journal* I notice that Mr. C. I. Graham was convicted in Nevada for violating the foul-brood laws and scattering the disease. This gentleman, I believe, is the same person who scattered disease in many parts of this State, and was prosecuted once that I have knowledge of, being convicted and fined the sum of fifty dollars.

* * *

November has laid the foundation for our next year's honey crop, heavy rains having fallen over the entire State—nearly three inches for the month so far, and I believe that is a fair average over the State. An abundance of filaree has already started; in fact, the whole earth is becoming a sward. Such a heavy rain at this time in the season is sure to be a lasting benefit, and an insurance of early bloom for spring breeding. There is a general feeling of encouragement, as well as belief that we have received only a little of our winter's moisture.

* * *

Dr. Miller, I am not sure that the food I eat has no effect on the color of my blood. Any way, I have heard of "blue-blooded" Yankees and "red-blooded" Southerners. Are you sure that it was the soil that made the difference in the color of your apples? At the present time I am laboring under the impression that a plant, its nectar or its fruit, does not acquire its color from the soil but from the air. There is a common belief that all plants come from the soil entirely, when the fact is that only a comparatively small amount of plant substance is taken from that source. Plant life and growth are for the most part comprised of matter taken from the carbonic acid in the air, and that, according to my knowledge, is the chief source of the solid matter of plants. Through the leaves the carbonic acid is taken from the air, then transformed into carbon, hydrogen, with a little oxygen, by various stages into starches, sugars, etc., the chief mission of the roots being to furnish water, nitrogen, sulphur, and phosphates in solution, which are combined in the plant structure to complete it. Aside

from the water, which is later almost eliminated by the other elements taken from the air, the roots furnish only a small portion of the plant structure. The composition of honey is said to be four-fifths carbohydrates and one fifth water. The water may be taken all or in part from the soil; but the carbohydrates are taken mostly if not entirely from the air; hence the conclusion that honey is for the most part from the air and not the soil. Now, if honey is from the air principally, it appeals to my reason that it is the chemical action of the particular plant from which it is produced that colors the nectar. Conditions being largely the same in the plant food of the air, I fail to see where the difference in the soil on this or the other side of the fence would affect the color of the nectar, for that, so to speak, illustrates the change of soils in some localities.

Here in my own city there are two kinds of soil divided abruptly by a low ridge not originally more than fifteen feet high. On one side of the town is a long slope of red decomposed granite soil, and on the other a sandy gravel soil, evidently made by the deposits of the Santa Ana River from years and perhaps centuries of overflows. Every plant has its peculiar methods of manufacturing the elements it gathers into the parts that constitute its life substance; and if it should deviate from that process it would cease to be the same plant. If the coloring matter of honey is taken up by the roots promiscuously, as some seem to believe, it may vary in color; but if formed by the action of the plant's own little manufacturing establishment, as I believe it is, from elements derived principally from the air, then I see no hopes for those who claim the soil makes the change. I do not believe the soil changes the color of your apples, doctor. The influence of the sun and light may be the cause, for sunlight is the deciding element in the coloring of plant life; and no color can be produced in them without its influence. Look at the colorless apples on the inner branches of your trees that have had no sunlight, and have received only that portion of the air that has been drained of the carbonic acid by the outer leaves. It may be that the elements taken up by the roots, combined with those collected by the leaves, have the deciding action in coloring the nectar and fruit. On that point I am not fully decided, and am open to conviction. The above, however, is my opinion at the present time.

Beekkeeping in the Southwest

LOUIS SCHOLL, New Braunfels, Texas.

NOVEMBER HONEY-FLOWS.

When you meet Northerners on the trains (from almost any State in the North), and you hear them talking about cold weather there at this time of the year it seems hardly possible that there should be such a great difference in the climate as compared with the warm, almost summer weather we are having here in the southernmost portion of Texas. What is more surprising is that the bees here are in the midst of a heavy honey-flow, storing much honey and building the prettiest white comb honey. The source of this abundance of nectar at this time of the year is a very thorny, rough, and otherwise unimportant-looking brush, called "coma." Whole areas of hundreds of acres are in immediate reach of some of the apiaries here, and these thickets are so dense and thorny in most places that they can not be penetrated by man afoot or horseback before cutting a path through them.

The small whitish star-shaped flowers cover the entire limbs and branches densely, and yield abundantly. The honey is of light-amber color and of fair flavor, although it has a peculiar twang to it. It reminded me of the twang of buckwheat honey, but is not so apparent, and the honey is not at all dark in color. Those who have acquired a taste for this coma honey seem to prefer it to the milder-flavored honeys, very much as the "buckwheaters" are fond of the stronger-flavored buckwheat honey.

REAL UP-TO-NOW BEEKEEPING.

On my trip through the Rio Grande Valley I had the great pleasure of stopping over night and a part of two days with my old friend Grant Anderson, of San Benito, Texas. Mr. Anderson is one of the leading queen-raisers of the country, and few are so ideally located as he is. He dwells amid a profusion of the honey-yielding brush and other plants, and in a rich irrigated section, with plenty of unbroken or "wild" land to make it an excellent honey location as well as being admirably suited for queen-rearing. And, further, he resides near the bank of a great water-course, or "arroyo," as it is called. He has a large gasoline-launch with which he motors from one apiary to another. All his apiaries are located on the banks of this arroyo, and the "Queen B," as the launch is called, not only carries Mr. An-

derson and his sturdy sons, who help their father in the work, but also all of the supplies. All of the honey is freighted home on this same "Queen B." Talk about pleasures of real motoring without the troubles of bad roads, tire troubles, and all those things common to road motoring! The early morning ride that I enjoyed caused a thrill of enthusiasm to penetrate every part of my being. Here I saw real up-to-now beekeeping, with the expense of travel to and from the beeyards cut down to the minimum.

* * *

IN EXTREME SOUTHWEST TEXAS.

The writer has been on a lecture-trip for the State Department of Agriculture for an entire month, with one or two day and night lectures every day. The trip took us through what is known as the mid-coast country of Texas, and then through the Rio Grande Valley to Brownsville. At this point we also made a short excursion into Mexico.

This trip is especially interesting, for the reason that the lower Rio Grande Valley is well adapted to beekeeping, almost every one of the great number of shrubs and other plant growths yielding more or less nectar or pollen. All the main nectar-yielders characteristic of Southwest Texas, the mesquite, catclaw, huajilla, coma, and dozens of others, are here in abundance. There are yet large areas without any bees; and that territory adjacent to the large irrigation projects is the most favorable location for apiaries.

One thing is certain, however—a great deal of this yet raw land will be rapidly put into cultivation; but there being so much of this, there will be many good locations for apiaries for quite a long time.

The climate here is almost ideal, and plenty of water is in easy reach. Wherever the irrigation canals have been extended makes it possible to grow a great variety of things associated with semi-tropical conditions. Oranges and other citrus fruits yield in abundance if properly cared for. The beautiful homes with the grounds planted with palms, banana plants, and other ornamentals also as well as fruit-bearing trees and plants are very attractive indeed.

One thing I want the reader to remember is that this is not a place to get rich quick without mixing muscle and brain with the soil and water.

Conversations with Doolittle

At Borodino, New York.

COMB FOUNDATION IN SECTIONS; THE MODERN SECTIONS; THE OLD TWO-POUND SECTION.

"I wish to get my sections all ready for the season of 1914 this winter, and I wish to know how much foundation to put in each section."

"I think the general custom at the present time is to fill each section full, or as nearly so as may be, in order that the combs may be attached securely to the section all around. This, with the incentive given the bees to draw out from this sheet of foundation a full comb all at once, and cap the whole over at one time, not only gives a larger yield of section honey, but a much more marketable product as well."

"Yes; but is it the best thing for the beekeeper to do? I was talking with an old man the other day who had kept bees for nearly half a century, and he told me that those making a specialty in bees and comb honey were very largely to blame for the vast amount of work devolving on the comb-honey producer, as well as for the low price of comb honey as compared with the high cost of living, through the advance in price of what such honey-producer had to buy with the cash obtained for his honey. He said that some thirty-five years ago they had a two-pound section box of a size which exactly suited the consumer; that this box was glassed so as to protect it in handling, also to keep out flies, ants, and dust. In the top of each box was a starter of natural comb, and honey stored in this manner brought the producer from 25 to 40 cents per pound, that price being profitable to the producer, and a joy to the lovers of comb honey. Now the average weight of sections when filled is about 14 ounces, thus making the producer handle two sections where he handled only one before; and by using plain sections with no wider sides than ends, no glass can be used to keep out vermin, flies, or dust, and no protection in handling is possible. He asked me this question: 'When those familiar with the handling of these plain sections occasionally give them a bruise or dig, what can be expected of the novice or retailer?' He then went on to tell how he had seen, in market, cases of modern honey being retailed from the counter, the combs of which were bruised and leaking, where fingers had mutilated the nice cappings in handling till all was a dauby and sticky mess, to the disgust of the seller; and winding up he asked, 'Who is responsible for this state of affairs?' As I could

not answer, he said with great emphasis, '*The beekeeping specialists.*'"

"This reminds me of what I used to hear years ago. There may be a grain of truth regarding beekeepers causing themselves more work and trouble by bringing in the one-pound sections, for, so far as I know, consumers never called for any thing smaller than the two-pound section until the smaller ones were brought forward by the beekeepers themselves. And I must admit that, with the average person, the liability to 'finger mark' on the nice cappings to the comb has some truth in it also, but hardly enough to make good the disadvantages of the older things used a third of a century ago. But you have not touched on the foundation matter which you wanted to know about."

"Yes; I will come to that next. This same man said that beekeeping specialists had brought out comb foundation, and urged it, till nearly every one thought he must pay out a good lot of the selling price of comb honey for the purchase of this foundation, and do a whole lot of extra work in order that the sections might be filled with it. And not only this extra cost, but it makes the honey tough to eat. 'This last,' he said, 'is really a more important subject than many of the beekeepers realize.'"

"But did he not tell you something about the other side of the matter—how, with full sheets of thin foundation, the bees do much more work in the sections; how the cells are regular and even; how it is a pleasure to look at the even cappings of the combs, and, above all else, how honey built on foundation will stand shipment to distant markets two to one better than that built by the bees from a starter of natural comb? I fear that your old friend has been using foundation made for the brood-chamber rather than that for sections. That made for sections at the present time often runs as thin as any natural comb ever built by the bees—so thin that there is 18 square feet in one pound. This wax may not be quite as brittle as the white flakes produced by the bees, but it is so thin that no reasonable consumer will say aught against it. With such thin foundation as this its advantages are so great that it is not likely it will be dispensed with when raising comb honey; and if you use the thinnest obtainable, and put full sheets in your sections, I think you will not injure the market for comb honey in the least, and you will have much better success in the pursuit of apiculture besides."

General Correspondence

BEEKEEPING IN ONTARIO

A Glimpse of Some of the Apiaries where Honey is Produced on a Large Scale

BY H. H. ROOT

Continued from last issue

On the last day of my visit in Canada, as described in the last issue, Mr. Holtermann and Glen took me in their machine across the country to visit other beekeepers in that locality. I wish that I might give a full account of our trip that day through the beautiful country in southern Ontario, and tell more about the beekeepers that we met, but it will be impossible to go into much detail.

We called at the apiary of Mr. Iver Holtermann, another son of R. F. Holtermann. As would be expected, he also uses the twelve-frame hive and winters in the large cases similar to those used by his father. Fig. 10 gives a glimpse of his yard at a time when the extracting was about half finished. Mr. Ivar Holtermann also has a power extractor, although it is the regular eight-frame size, and an engine and honey-pump. He does most of his extracting, uncapping and all, himself. By the

way, when I went over to Canada I had a feeling that the twelve-frame hive was about two frames too large; but my feelings in this respect grew weaker while I was there, and have been much less perceptible ever since. It is true that it takes a pretty husky man to lift around twelve-frame supers of honey; but aside from the one disadvantage of the greater weight, I can not really see much to criticise in the twelve-frame hive. They certainly enable the beekeeper to control swarming more easily; and if, for any reason, a smaller brood-chamber is desired, it is very easy to use a couple of dummies. In other words, the twelve-frame hive certainly permits as large or as small a brood-chamber as any one could possibly want. It is easy to have a ten-frame or even an eight-frame brood-chamber in a twelve-frame hive, but rather difficult to have a twelve-frame brood-chamber in a ten-frame hive.

We called at the home apiary of Mr. James Armstrong, whom I remembered as being for a time in charge of the Ontario honey exhibit at the Pan-American Exposition. Mr. Armstrong was away on an inspecting trip, as he is a district inspector of Ontario; but we made ourselves at home

FIG. 10.—Apiary of Ivar Holtermann.

FIG. 11.—Apiary of Jas. Armstrong, Inspector of Apiaries for a district in Ontario.

in his yard, and took a picture of one corner of it which is shown in Fig. 11. The location of the yard made it impossible to secure any thing like a comprehensive view of the whole apiary. Mr. Armstrong uses eight-frame hives, as will be noticed, and he expected to get at his extracting soon. Hives tiered up in this way always look good to me.

There is considerable sweet clover along the roadside in certain parts of southern Ontario; but as yet it is still considered a noxious weed, and the farmers are constantly neglecting important work to keep the sweet clover along the roadside mowed down. When the experiment stations of so many of our States are publishing bulletins telling of the value of sweet clover, and when the United States Department of Agriculture has published such a complete bulletin telling of the value of sweet clover to the soil, etc., it seems strange that there should still be so many localities, in our own country too, where hundreds of dollars are spent right along in the frantic attempt to wipe out every sprig of sweet clover that dares show itself above the surface of the soil. If it were not such a serious matter it would seem ridiculous to think of all of the time and money spent to combat so terrible(?) a foe. Sweet clover is not a foe to the farmers at all in the first place; and in the second it is the easiest thing in the world to kill off if it is not wanted. In some places in Ontario it grows very luxuriantly,

Fig. 12. One of the roads that we passed had a solid bank of white sweet clover on the left, and another solid bank of the yellow variety on the right, Fig. 13. The shorter, less bushy growth of the yellow sweet clover, shows plainly.

We called at the apiary of Mr. Arthur F. Hodgson, who spent three seasons with Mr. Holtermann, but were disappointed in not finding him at home. We took a picture of his escape-board, the principal features of which were set forth in his article on page 577, Aug. 15. The picture in question is shown in Fig. 14. Mr. Holtermann has never used bee-escapes to amount to any thing, for the reason that honey removed by the use of the ordinary bee-escape board is cold, and therefore very difficult to extract rapidly. The new board certainly overcomes this undesirable feature; and Mr. Holtermann, who has been so long an advocate of shaking and brushing bees from extracting-combs, told me just before I left that he believed he would use a couple of hundred escapes of this pattern himself another season.

Since the illustration of this ventilated escape-board in the Aug. 15th issue there have been a number of objections suggested, which may or may not be serious. It is true that a wire-cloth escape-board is not a very rigid affair, and it is possible that they would get broken pretty easily, especially if the bees build brace-combs to the wire cloth or when the frames were badly

FIG. 12.—A luxuriant growth of white sweet clover near Selkirk, Ont.

stuck to the brood-chamber. Doubtless rather more care should be taken in loosening this type of board than the regular more rigid type. Mr. Ivar Holtermann admitted that bees attach brace-combs to the wire cloth somewhat, but thought this not a serious objection. It has been suggested that bees would not go down out of a super as readily, since they can see the light from the entrance through the wire cloth; and, finding themselves confined, might spend their time trying to get through the wire cloth directly above the entrance. Those who have used this board, however, insist that the bees go down through the escape just as readily as though it were located in the solid board.

In parting with Mr. Holtermann at the station, after the delightful trip that we had had, I renewed my promise to "come back again" next year. As the train moved away, I reflected that my friend is a successful business man who believes that there is more in life than the mere making of money. Even in the summer time when business obligations press hard he often takes the Sunday services in churches surrounding the section where his bees are located, thus making himself one of that great and steadily increasing class of Christian business men who believe in mixing religion and business.

HANDS ACROSS THE SEA

BY JOHN SMALLWOOD

I have been a constant reader of GLEANINGS for some time, for I greedily devour all literature anent bees or beekeeping. You know what Bacon, in the quaint phraseology of his day, says of books: "Some books are to be tasted, others swallowed, and some few to be chewed;" and GLEANINGS is one of the "few to be chewed." Yes, you have to chew it, and digest it too, because the modern beekeeper who would be abreast of the time must know what you are doing over there. We have scientific men galore in Europe, yet all the knowledge and all the discoveries are not to them. On your side, too, important investigations have been made, and with great success, in bacteriology, in the diseases of bees, in queen-raising, and in the best way to raise and market honey, and we are willing to be taught.

But it is not pleasant to note how seldom are the contributions to your columns which reach you from this country. They are almost as rare as flies in amber, or as the proverbial plums in a sailor's pudding. Why? I am sure it is not the fault of your editorial staff. The same arguments which compel me to read you apply also to you. Your staff are broad-minded enough to wish to gather in all that the world has to say

FIG. 13.—Sweet clover bordering the road—the white variety on the left and the yellow on the right.

about our craft. After sifting away the chaff, there is a bulk of wheat left. Why, then, is it? I can think of only one reply, not to our credit, and that is that we over here are too lazy. We are satisfied with contributions to our *Bee Journal* and *Record*—very good papers, and not to be surpassed for useful reading-matter; but we should keep more in touch with you.

Now, even across the Atlantic, I think I can hear some one say, "Practice what you preach. Set the example, and write yourself more frequently." Well, there are two or three ways of looking at that proposition. First of all, there are your editors to consider. They might not think my manuscripts worth the paper they are written on, or the penny stamp it costs to post, and forthwith throw it in the waste-paper basket (which I am informed is rather capacious), with the ejaculation, "What rubbish!" I almost think they would be right. When I come to think of it, my bump of conceit must be fairly well developed to have the "cheek" to tell other people what to do. Another way of looking at it (this time from my point of view), I could not pretend to do it. It is rather too tall an order. There are many "specialists" whose writings I am sure would interest you. I only attempt a chatty letter, with just occasionally a glimmering streak of wisdom, a friendly something now and then from the old country.

"The old country!" Why do we like you better than the other boys? Sentiment is out of fashion, does not exist, it is said.

Don't you believe it. It can not be gotten rid of. Why, you might just as well tell me the sun does not shine, or the earth does not go round. Why, then, do you call us "the old country," and why do we give you the place nearest to ourselves? (I seem to be always asking questions and answering them myself.) Because you are so knit together with us by blood relationship. Is there a single family in Great Britain, high or low, rich or poor, which has not got its offshoots with you, forming units of your great nation? and "blood is thicker much than water." Do we not both speak the same language? and, being related in kinship, are also related in the currency of thought and literature. These are strands in the mighty cable which lashes us inseparably together.

But we beekeepers—have we not another link to unite us? "There is a freemasonry in beekeeping; a beekeeper is a brother to fellow beekeepers all the world over." These golden words were said to me by Mr. T. W. Cowan. Would you have an object-lesson, an example? There is one at your door. Refer to the November issue of your contemporary, the *American Bee Journal*, and its very last words in the article, "With the Editor in Sunny France." "We are getting badly spoiled, for we are welcomed and feasted, and complimented everywhere. We did not realize that we could find so many friends in Europe." This, of course, might be expected to happen to Mr. Dadant, whose name, of course, is known where beekeeping

FIG. 14.—Arthur F. Hodgson's ventilated bee-escape board; heavy wire cloth is substituted for the thin board, and two escapes are used.

is known; but wandering over sunny France and fertile Italy with our Mr. Herrod, I, too, have had the same experience, the same open-hearted fraternal welcome. The fact of being a beekeeper was sufficient. The word was an "open sesame" to the hearts and welcomes of other brothers of the craft; ay, it was even a key to the knowledge of our hosts; for what beekeeper keeps his experiences locked within himself? We have no trade secrets. Your paper and every bee-paper in the world teems with enquiries from correspondents, neophytes, who would learn their faith, and you are pleased to teach them the A B C of Bee Culture, so that some day they may arrive at the X Y Z of perfect apiculture.

London, England.

A NEW METHOD OF SHAKING TO CURE FOUL BROOD

The McEvoy Plan Simplified; Inducing the Bees to Use up all Diseased Honey by Building Combs on Starters Attached to the Cover

BY W. A. BARSTOW

In treating foul brood when bees are shaken on to starters of comb foundation in regular frames these frames have to be shaken later on, one at a time, and this gives the bees on the last few frames a chance to eat some of the infected honey that possibly may be stored in the new combs built, and

there is danger of getting some of this in the next comb that is drawn out.

My plan is to shake all the bees and queens into any kind of box of fair size (or a hive-body) having a plain cover the same size. On both sides of the cover board I tack two-inch starters by means of small nails and thin strips of wood, which starters are somewhat shorter than the length of the cover so that the bees will not stick them fast to the ends of the box. I put seven or eight starters on each side of this cover.

This cover prepared with starters on both sides I place over the box, and for the purpose of protecting the

starters on the upper side I put an empty super over it with a regular hive-cover on it.

After the bees have been drawing out the foundation for three or four days I lift off the empty super and set it to one side, take up the cover with the bees, and give a quick shake, dislodging all the bees with one jerk. Then I turn the cover over, thus giving the

Barstow's method of providing starters for the bees to work on when being treated for foul brood. A quick jar dislodges all the bees at once.

bees a new set of starters to work on, and put the empty super back on again, thus covering up the combs that the bees have made. By this plan I can shake a dozen colonies in the same time that would be required to shake one having starters in frames, and none of the bees have a chance to eat any of the diseased honey, for it is out of the way before they know what has happened.

In the evening or early morning one can make the rounds again, scrape off the combs on the upper side of the covers and dispose of them.

At the end of the second period of four days the bees can be shaken once more, this time into their new hive on frames of full sheets of foundation or combs, with or without brood, and all disease is gone.

The boxes used to shake the bees into can be cleaned out and used again, if necessary. If one desired to use wired starters to prevent any combs from breaking, this could be easily accomplished by nailing cleats or ends on the shaking cover the proper distance apart just to fit inside the box when the cover is in position, said cleats to support the wire. However, this would make more work, and it would be harder to put on the starters and also harder to clean off the combs. With the small amount of comb built it is not very heavy, and the danger of breakage is not great.

San Jose, Cal.

THAT SNOW BLIZZARD AT MEDINA, NOV. 9, 10

Loading that Car of Bees for Florida

BY E. R. ROOT

On Sunday, Nov. 9, as already reported in these columns, we had a blizzard of wind and snow that exceeded any thing we had had for the time of year in the memory of the oldest inhabitant. The front cover page of this issue shows a small section of our apiary, house-apiary in the background, the evergreens for windbreaks, and the barn in the rear. The little mounds of snow show where the hives were buried. Notwithstanding the apiary was thoroughly protected by windbreaks from the evergreens that are supposed to eliminate all driftings of snow, it will be seen the hives were clear out of sight.

The accompanying engravings will show the difficulties under which we labored in order to get our bees out of the snow and loaded on to the car that was to take them to Florida. In some cases (see Figs. 1 and 2) the men had to work up to their waists in shoveling out the damp heavy snow that

FIG. 1.—Hunting bees—not in the woods, but in the snow. Standing waist deep, a big cake of snow was first removed, exposing the top of the hive.

completely enveloped the hives. In another view (Fig. 5) will be seen the men loading the hives on a low-wheeled wagon with wide tires. It was impossible to use any sled or bobs on account of the depth of snow, and from the further fact that the runners would

FIG. 2.—Lifting up the hive through three feet of snow.

FIG. 3.—Hives pulled up and resting on the top of the snow, three or four feet above the ground.

cut through the loose damp snow to the bare ground.

It took us a day to dig those 300 colonies out of the snow and haul them to the warehouse where they could be put on the car. At first we decided to leave the bees under the snow and defer starting the car until after the snow had melted away; but examination in many cases showed that the bees were suffering from the want of air, as the snow was exceedingly dense and heavy, and because, further, in a few instances, the entrances were sealed with ice. We decided, therefore, that it was best to dig the bees out and put them in the warehouse, as there was no knowing what would happen if severe freezing weather should set in later. But it turned off warm, followed by slow rains; and on Nov. 14 the bees started on their long journey to the Southland. Mr. Marchant in charge reported that the weather was exceedingly warm, and he had some difficulty in keeping the bees quiet. We had planned on cold freezing weather. After it began to warm up we regretted having moved the bees off their summer stands. But it was too late to put them back, as the bees could not have been put in their original location; and the confusion of flight would have been enough to cause considerable trouble as well as a heavy loss of bees in the snow. We were, therefore, compelled to start whether the weather conditions were favorable or not, even though the bees were roaring, indicating their desire to get out and enjoy the warm balmy air. But all is well that ends well, and the bees arrived at

destination in good condition despite their noisy roaring.

In the matter of ventilation, the bees were provided with a wire-cloth screen on top, nailed to a two-inch rim and a wedge screen in the entrance. When we get ready to move the bees from the Southland to the North, the bottoms will be removed entirely, and a two-inch rim with screen will be secured to the top and bottom of each hive. But we had expected to move the bees south this winter in chilly or freezing weather, and it seemed unnecessary to provide for more

ventilation than at top and entrances.

The bottoms were secured to the hive-bodies by means of double-pointed crate staples (see Fig. 6). A two-inch rim with wire screen was secured to the top in the same way, on the day before we expected to move, or, as the sequel proved, the day before the big snow blizzard came on. But, fortunately, we placed on top of the screens ordinary super covers, and over these telescope covers as seen in the accom-

panying illustrations. The intention was, of course, to remove the super and telescope covers in case it would prove to be too warm

ed three or four fold. On one arm of the V another angle is formed, as seen in the diagram accompanying. The purpose of the

FIG. 7.—Tacking on the entrance screen. These screens hold their position by friction, and do not need to be tacked until just before hives are loaded. A wide piece of galvanized wire cloth is bent in the shape of a long V or wedge, with a right-angle bend half an inch from one of the edges. The point of the V or wedge is pushed in until the right-angle bend comes flush with the front of the hive, the other edge lying flat on the alighting-board, thus affording plenty of surface for tacking. This plan gives much more surface than a plain vertical screen, and the bees can not crowd down, shutting off the air at the bottom.

for the bees in the car; but before loading they were left on.

Under Fig. 7 will be seen a little note describing the means for providing entrance ventilation. A straight piece of wire cloth, unless secured by strips of wood, will not hold its position readily over the $\frac{7}{8}$ -inch-deep entrance; and, what is more, it presents only $\frac{7}{8}$ inch by the width of the hive of air surface. By bending the strip of wire cloth into the shape of a letter V, and crowding this V-shaped piece into the entrance the air surface will be increas-

last fold is to provide a place for nailing at the top, as shown in Fig. 7.

In moving bees to outyards, if we close the entrances at all we put these bent pieces of wire cloth in the entrance, without nailing. Friction is sufficient to hold them in place, because the V-shaped strip of screen has a tendency to wedge against the top and bottom of the opening.

It would almost seem as if the fates were against us when we get ready to move a carload of bees. A year ago last spring, when we started to move our second car of bees from Florida we were nearly overwhelmed by a flood. The accompanying il-

BEES AND COLLEGE FINANCES

How a Young Lady Paid a Considerable Part of Her Expenses while at School with Money She Earned with Bees

BY FLORA M'INTYRE

FIG. 8.—Loading into the car. Regular cover removed, a super-cover being left over the screen temporarily.

illustration shows the difficulties under which we worked at that time. Well, now, we did not expect floods or any thing else when we started south this winter. We certainly did not expect a blizzard of snow—something that never before had been seen at this time of the year. But it came just the same. Luck has been against us at the starts; but we do not mind it if it is only with us *at the finish*.

[For several years back an impression has gone out that a certain young lady in California put herself through college with the money she earned from her bees. Learning that it was Miss Flora McIntyre, of Ventura, Cal., we inquired if it would be possible for us to secure the particulars. We began by coaxing the mother to get her daughter to tell the story. We later got in touch with the young lady herself. The mother, Mrs. Harriet Wilkin McIntyre, is a daughter of the late R. Wilkin, one of the early honey-producers of California. Mr. Wilkin, with two or three other pioneers in the early days, about the time gold was discovered, showed to the beekeeping world that California had something besides gold within its borders, and that was—honey of a superior quality and quantity.

We were interested in securing this story, for two reasons. First, because there are many young men and women who are anxious to secure an education; and if they could use bees to contribute to their support while in college they would gladly avail themselves of the opportunity during vacation time. Second, we desired to get this story on account of the parentage of the young woman. Her father, J. F. McIntyre, was for many years proprietor of the famous Sespe apiary, where 500 colonies were kept in one yard year after year. This apiary is one of the most beautifully located, so far as mountain scenery is concerned, of any in the United States.

Mr. McIntyre was the first user of a power-driven reversible extractor in the United States if not in the world. It was one of his own devising; but instead of using a gasoline-motor he derived his motive force from a water motor fed by a stream on the mountain sides. This extractor was an automatic reversible, somewhat different from the style now made, but nevertheless one that did its work satisfactorily. Notwithstanding that this was a success, it has taken some years for the rest of the beekeeping world to catch on; and now power-driven extracting outfits are coming to be quite the fashion.

Mrs. McIntyre, a daughter of R. Wilkin, as al-

The flood hindered us in the second shipment.

Harriet Wilkin McIntyre with her five daughters, her son, and two sons-in-law. Flora McIntyre indicated by cross.

ready mentioned, would naturally marry a beekeeper; and so it is nothing strange that one of the girls, Flora, should have been a "victim of the bee fever from infancy," as she says.

We are very glad to present this story, not alone because of its intrinsic value, but because of the interesting photos that accompany it. The young lady very frankly tells her experiences; and the fact that these experiences cost her something should be a warning to others not to overdo while at school. As we know from past experience in our old college days, the usual college curriculum will give any student all he can possibly do without other work.

We will now let Miss McIntyre tell her own story. It is worth reading.—Ed.

The bees have sometimes been given the credit of paying my way through college. That is an exaggeration; they merely helped make it possible for me to spend three years at the University of California. The following is an account of what they really did in behalf of education—as nearly accurate as I can give it from memory.

The opportunity came after a severe illness had cut in half my third year at high school. With the arrival of the second spring I was strong enough to work with the bees, and was given the privilege of

conducting the queen-rearing for my own profit, provided I would supply at half price the queens needed for requeening in the home apiary.

I have been a victim of "bee-fever" from infancy, so the enterprise was a pleasure in itself. I had also helped with the bees ever since I could remember, which experience made it practical. Moreover, I was firmly determined to go to college some day, but was much in need of the wherewithal. This gave an added reason for my accepting with alacrity the work with the bees.

If I remember correctly I used some twenty-five eight-frame hives divided in two by a partition running lengthwise, making fifty nuclei in all. I began work with the swarming season, raising my queens in dipped cells. These were supplied with larvæ from selected colonies in the apiary, and placed in hives preparing to swarm. The nuclei I filled with bees by dividing regular colonies when they swarmed, giving two combs of brood with the adhering bees to each nucleus, substituting a queen-cell of my own rearing for those I cut away.

I filled all the orders that came that year, without any advertising, the proceeds of which amounted to a little over one hundred dollars, and from the queenening at home I made fifty dollars. By doing the uncapping during the extracting season I added about forty dollars more. In all I dedicated that season some two hundred dollars to my college course; and when, that August, I had the privilege of attending a National beekeepers' convention in Los Angeles, and seeing there many of the notables I had read so much of in the bee journals I felt that I was almost a full-fledged beekeeper.

I wore in the apiary that season a costume I had used at school when playing basket-ball. The blouse and short skirt were of blue demin, and the bloomers of a lighter-weight material. I added leggings, and, of course, long-sleeved gloves and veil. This costume was very satisfactory; but I doubt whether it would ever be worth while to make a special outfit, since there are always dresses on hand that need wearing out, which will answer the purpose very well.

To get back to the queen-rearing: The next two summer vacations were too short to allow me to undertake the work. But during the third year, on April 18, came the San Francisco fire. This brought my freshman year at college to a sudden end; and, although I stayed over at Berkeley a week by permission from the authorities to cross to the city and see the ruins I was home by May 1, and soon began work. I think I used about 75 nuclei that year, and I sent out advertising cards among California beekeepers. Owing, however, to the late start, and the absence of an order for queenening at home, I added only one hundred dollars to my fund. The vacation following I added seventeen dollars more by uncapping. Therefore three hundred and twenty-five dollars was about the amount of help the bees gave.

To those who may think of doing likewise, it may be of interest to know that that amount paid my incidental expenses

The McIntyre children, Flora McIntyre second in the row.

(books, stationery, dues to student organizations, etc.), including about one hundred dollars for traveling expenses between Berkeley and Ventura during the three years I was at college. It could have been done with less, as I included a good many tickets to concerts and good plays. I made it a point to see as many as possible of the great artists who appeared in San Francisco, Oakland, and the Greek theater on the campus at Berkeley, because I considered these a part of my education, and I was not sure that I would ever have such an opportunity to see them again.

My board and room I secured through assisting with the housework in a Berkeley family. My clothes I made at home, and my mother gave me about two hundred dollars, which, I have calculated, just about covered the expense due to illness and the seventy-five dollars I had left at the end of my third year.

I would not, however, advise any one to follow my example so far as to undertake extra work during the college year. That plan gives practically no time for recreation during fifteen hours or more of the twenty-four, and that means almost no time for "student activities." It is taking chances with one's health, besides. If I had it to do over again I would borrow the money to pay for my board and room, for I think

Flora McIntyre in her working-costume.

that a debt would be a lighter burden than ill health.

To make this tale complete I must state that, when I came home with one more year between me and graduation, I was compelled by illness to take to my bed, on which I remained two years, where, in fact, I have spent half of the five years that have just passed, and from which I now send this little sketch.

Ventura, Cal.

BEEKEEPING IN OREGON

BY H. F. WILSON
Entomologist Oregon Agricultural College

With such data as we have at hand, it would be impossible to estimate correctly the status of beekeeping in Oregon. Many farmers keep from one to several stands for home use, and in all parts of the State one may find from a few to many colonies that not only furnish honey for the home but also give a market surplus.

In looking over the data secured in a recent farm survey of this State, one might be led to believe that most of our honey is produced in southern Oregon; but in that it is misleading. The division known as

central Oregon probably has the greater number of large commercial apiaries, with the Columbia Basin second and southern Oregon third. These facts are not shown in the survey, for the reason that it was taken as a general farm survey, and it so happened that of the five or six commercial apiaries in southern Oregon the largest happened to be recorded. In the survey of central Oregon it so happened that out of a dozen or more commercial apiaries only two of medium size were recorded. With these exceptions, other data at hand show that the average arrived at is fairly representative of existing conditions.

The United States census for 1910 reports one farm in every five as having bees; but during the last two years the number of colonies has increased, both in the number of large apiaries and with the number on small farms. A considerable increase is due to the number secured by orchardists for pollination purposes.

With data on hand, and the figures from the United States census for 1910, a distribution map has been made which shows some very interesting data. Each figure represents 1000 colonies, showing an approximate total of 50,000 colonies with a value of \$250,000. The writer believes that,

for seed; and with the sweet clover which grows in waste places it gives an ideal pasturage for bees. There are many fine apiary locations in different sections of the State, but all of these should be thoroughly investigated before an attempt is made to start an apiary in any one of them.

EUROPEAN FOUL BROOD

Alexander Treatment Endorsed

BY C. F. BENDER

After seven years' silence I believe that I am entitled to say a few more words as to the treatment of European foul brood, especially as I have rid my bees of the disease completely, not having seen a cell of it for three years. I was among the very first to champion the Alexander treatment (see GLEANINGS, 1903, and later). Indeed, I used that plan before it was ever published, having discovered it accidentally, as Mr. Alexander probably did.

When the disease first appeared among my bees, in 1902, I began treating them by shaking on foundation, on the so-called starvation plan, according to the method then in vogue. The plan was faithfully followed for two seasons; but there were so many cases of recurrence that I had begun to despair. I think the weak point in this treatment was in leaving the old queen with the bees. If a young Italian queen were given at the time of shaking, I think it would always succeed. But if a young queen is given after keeping the bees queenless for a while it is not necessary to shake.

In shaking the sick colonies there was always a lot of brood left over; and the question with me was, what to do with it. It seemed wasteful to burn or bury the combs when so much of the brood was healthy. The way usually followed was to put a lot of this brood together, leaving it

for 21 days to hatch out. After hatching was completed the bees were shaken from the combs again, starved three days, then hived on foundation and given a young queen, if they had not raised one that suited me, which was not often, as the disease seemed to attack queen-cells worse than worker brood, and in the worst cases none of the royal cells would hatch.

Toward the end of the summer of 1903 I ran out of foundation and frames, and the combs looked so nice and clean after hatching out that I decided to keep the bees over winter on the combs and shake them in the spring. When spring came I watched these colonies carefully, expecting, of course, that they would be the first to show dead brood; for I had been taught that, to get rid of the disease, we must get rid of the germs. I was surprised to find dead brood in several colonies that had been starved and shaken by the orthodox plan; and equally surprised to find not a cell of it in those that had not been shaken.

I was very reluctant to adopt the dequeening plan for a regular treatment, because I could see no reason why it should cure; and it did fail sometimes. Theory said that the trouble was caused by germs that multiplied in the young larva, and finally killed it; that the disease was spread from cell to cell, and from hive to hive, by means of these germs. The rational treatment, according to that theory, was to destroy those germs. I tried antiseptics of several kinds, but they all failed to cure.

As I had read medicine a little, I borrowed some books and read up on epidemic diseases in general. I learned that, when a patient recovered from such a disease as diphtheria, for instance, he did *not* get rid of the germs first. They were often to be found in his system in large numbers, even for weeks after recovery; but for some reason they did no harm, and the doctors did not know why they were harmless. I learned so much about what the sages did *not* know about germs that I was ready to lay my theory aside for a while.

After that the only thing that troubled me about the dequeening treatment was the occasional failures. While I was still working on the problem Mr. Alexander's articles appeared in GLEANINGS, and the whole matter became clear. As I had complete records of all my colonies for several years back I was able to verify Mr. Alexander's statement that young queens were necessary to success; and if the disease was severe, that Italian blood was much the best.

For a while I practiced dequeening 21 days to allow the brood to hatch out, then shaking on foundation without starving.

That plan also was laid aside, as I became more and more convinced that the Alexander treatment was a complete success. I have no theory to cover the facts. I only know that it succeeds if followed strictly as Mr. Alexander has given it.

There are some cases that may be cured with a shorter period of queenlessness than he has recommended; but until one has had long experience it is not safe to have a laying queen in the hive in less than 21 days after the old one is removed. If the removed queens are introduced in other hives the disease usually follows them, even when the queens are young and vigorous. So it is usually best to destroy the queens when they are removed.

Dr. Miller has given us some modifications of the Alexander plan that I should like to try; but the disease had disappeared among my bees before his experiments were published. I am pretty sure, though, that his cases were much milder than mine. In my worst cases three-fourths of the brood would die in a very short time, and the combs were full of rotten larvæ with a strong sour smell. Such colonies always required a long period of queenlessness. Generally I kept them queenless 18 or 20 days, then gave a virgin or a ripe queen-cell.

Many will doubtless wonder as I did what will be the final outcome of the disease question—whether it will kill off all the bees, or make beekeeping unprofitable. Not at all. When it first appeared in this locality nearly every farmer had a few bees, mostly black. Where no treatment at all was given, most of the bees died; but two neighbors who merely Italianized their bees still have nearly as many colonies as ever. By using the treatment just given I have kept bees for a living through the worst of it, though I could have handled more colonies if they had all been healthy. One good result, among others, was the destruction of nearly all black bees, leaving the field to the Italians.

I have mentioned elsewhere the peculiar way in which the disease spreads. I had always supposed that it was spread mostly by robbing; but experience convinced me that the young bees at play were the most frequent cause of new cases by entering the wrong hive after a flight. My hives are arranged in pairs, two on a stand. When a case appeared, say, in the left-hand hive of a pair, at the front of the apiary, the left-hand hive of other pairs near the first would soon show dead brood. I have seen it several times follow one side of the apiary, entirely across, taking the left-hand hive on each stand, while those on the right hand remained free. I could see no explanation except that the young bees that had

been feeding sick larvæ had taken a flight, entered the wrong hive, and carried disease to a healthy colony.

Incidentally I learned something about how bees mark their location where there are many hives together. They seem never to mistake right and left, and never to enter a hive of another color than their own. The most common mistake is for them to enter the hive just behind their own, and on the same side of the stand.

In conclusion I must warn the novice, as Dr. Miller has done, that I have been talking about European foul brood. With the American form, so called, this treatment might prove a failure. If you are in doubt as to which you have, send samples to Washington and have them examined.

Newman, Ill.

THE QUEBEC CONVENTION

BY A. O. COMIRE, SEC.

The annual convention of the Quebec Apicultural Society was held in Montreal Nov. 12, at 10 A. M. About a hundred members were present, Dr. Emery Lalonde being in the chair.

The minutes of the previous meeting were read and approved, and the following officers nominated.

Dr. Emery Lalonde, Rigaud.

J. O. Levaie, Rigaud.

Jacques Verret, Charlesbourg.

J. A. Vaillancourt, Montreal.

Chrs. Ed. Martin, Louiseville.

J. A. Desforges, Pont-Chatteau.

Xavier Morin, Maskinonge.

F. W. Jones, Bedford.

Michel Dufault, St. Roch.

Ludger Rochefort, Beauceour.

Prudent Lapointe, St. Henri de Mascouche.

Ulderie Paradis, Cavignac.

A. L. Beaudin, St. Chrysostome.

Mr. Dufault proposed that the Hon. J. E. Caron, Minister of Agriculture, be named Honorary President of the society; Dr. Emery Lalonde President; A. L. Beaudin Vice-president; A. O. Comire Secretary-treasurer for the ensuing year.

The report of the Treasurer showed a balance on hand of \$326.

Mr. H. Nagant, representing the Minister of Agriculture, then gave a paper before the convention concerning statistics relative to the production of honey in Quebec. In his letter the Minister complains that our society has not furnished as complete statistics as those furnished by the societies in the counties of L'Islet and Quebec, and that, in consequence, he found himself under

the necessity of retrenching the appropriation now accorded us. The Secretary replied to Mr. Nagant, saying that it was easy for the societies mentioned to furnish complete statistics, for each county had to look out only for itself, while if the society asked for statistics for the whole Province it would be a work that would require the help of all the office employees for a whole season, which could not be compared with the work done by the societies mentioned. The secretary said the Department had not asked him for statistics for this year.

At the afternoon session it was resolved that the Minister of Agriculture be asked to continue the appropriation which he has kindly accorded us in past years, to the amount of \$300; also that he be asked to continue the appropriation made last year for the purchase of Italian queens, and to increase the amount to \$1000, and that the first service of queens be made immediately to the members of the apicultural society. It was also resolved to request the minister to be so kind as to amend the law so as to extend the powers of inspectors and to render their work more efficacious; also to insist on the use of hives with movable frames to take the place of the fixed type; also to forbid the importation into the Province of bees and supplies infected with disease, and to increase the penalty imposed on those who violate the law regulating the spraying of fruit-trees in bloom.

Mr. Morley Pettit, Provincial Inspector for Ontario, then gave a talk on the organization of beekeepers' societies, and the advantages to be derived therefrom. He gave also a talk on wintering bees. He was followed by Mr. L. M. Grignon, B. S. A., who spoke on bee culture in general, and on the establishing of an apicultural bee journal in this Province.

Mr. Ch. Peloquin, ex-president of the society, gave an interesting talk on rearing queens. His remarks were followed by some from Mr. Beaulne, assistant entomologist at the Ottawa Experiment Station, who spoke on the renewal of queens every two years.

A vote of thanks was extended to the speakers.

On the morning of Nov. 13 the convention was called to order. Mr. J. C. Magnan gave a very interesting account of beekeeping in the county of Portneuf, where he lives, and the means he has used to advance the industry. He was followed by Mr. M. Dufault, who explained his plan of wintering.

To close, Mr. J. F. Prud'homme gave a very interesting talk on the best time to put

bees in the cellar, and his plan of requeening each year.

A resolution was passed, inviting women to attend our conventions.

The following premiums were awarded:

WHITE COMB HONEY.

First prize, Dr. L. J. Comire, Yamaska West, \$2.50.

Second, Vincent Benoit, Ste. Scholastique, \$1.00.

DARK COMB HONEY.

First prize, \$2.50; second prize, \$1.00.

LIGHT EXTRACTED.

First prize, A. L. Beaudin, St. Chrysostome, \$2.00.

Second prize, Dr. L. J. Comire, Yamaska West, \$1.00.

DARK EXTRACTED.

First prize, A. L. Beaudin, St. Chrysostome, \$2.00.

Second prize, Vincent Benoit, Ste. Scholastique, \$1.00.

The convention adjourned to 2 P. M., and when called to order Mr. Harry Jones gave an exhibition of cages used for shipping bees by the pound without frames.

Mr. Beaulne gave an address on wintering bees outdoors as practiced at the Ottawa Experiment farm. He was followed by Mr. J. A. Vaillancourt, of Montreal, who gave an interesting talk on the sale of honey, and the best manner of packing it for shipping to market.

Mr. Arthur Comire, inspector, gave in his own name and those of his assistants a general report of the work of inspection they had done this season.

BEEKEEPING TO BE TAUGHT IN THE MINNESOTA UNIVERSITY

BY P. J. DOLL

The Minnesota Beekeepers' Association succeeded in passing a bill through the State Legislature last winter, which established a Division of Apiculture at the State University. Minnesota has now an appropriation from the Legislature of \$5000 a year for the development of the beekeeping industry; \$2000 of this is to enforce the foul-brood law; the rest, \$3000, is to establish and maintain a Division of Apiculture.

The duties of this Division are to give instruction to the students at the University, to experiment with bees on practical lines, and to aid and develop the bee industry in Minnesota and the Extension Department.

Minnesota is the only State in the Union that has a Division in beekeeping that is not connected with or under some other department. Even the bee department at Wash-

ington is under the Entomological Department. We believe that the bee industry is just as important in the development of our State as dairying, hog, or poultry raising.

Rev. Francis Jager, of St. Bonifacius, Minn., has been appointed by the board of regents of the University of Minnesota to be the chief of the Apicultural Division, and will be called the State Apiarist. Father Jager, as he is called, is a thorough and practical beekeeper. Although he devoted less than half of his time to bees, he has produced, the past season, about 20,000 lbs. of honey from about 110 colonies of bees, and is now wintering 225 colonies. He is a scientist, and a natural-born teacher and experimenter.

At the Minnesota State Fair he extracted, bottled, and labeled 12,000 lbs. of honey. This display created so much interest that the daily papers of Minneapolis and St. Paul had articles on it nearly every day for a week or more. The effect on the public was noticed by the dealers in honey, who sold more honey at better prices than ever before. The beekeepers of Minnesota are fortunate in having so capable a man in this office.

Father Jager announces that he will have a course in beekeeping at the University, commencing January 6, and lasting about thirty days. There will be another course, of ninety days, during April, May, and June. He intends to keep about 100 colonies of bees at the University next summer.

No doubt there will be great developments in the bee industry in Minnesota in the near future. Large yields of honey are reported from all parts of the State, ranging from 100 to 400 lbs. per colony. An entire crop failure has never been known, and there are vast territories of good bee locations with scarcely a bee on them.

CUTTING ALFALFA

Rules for One Locality may not Apply to Another

BY PAUL E. USSHER

In *Stray Straws*, Nov. 1, I read the short article on alfalfa. In that article the question is asked, "Has it been proven beyond doubt that there is any advantage in cutting alfalfa before it comes into bloom?" As a Westerner I feel qualified to write on the conditions existing in sunny California and Arizona. In the great Imperial Valley in California, and in the Nile-like valley of the Colorado in Arizona, we find conditions well nigh perfect for the growth of that greatest of all plants, alfalfa.

Alfalfa is the great western food for horses, cattle, and the ostrich. I mention the ostrich for the reason that there are thousands of these giant birds reared in Southern Arizona. It has been proven beyond doubt that hay for dairy purposes should be cut when the plant is about one-tenth in bloom, and for horses and mules the plant should be allowed to attain practically full bloom. The reason is a scientific one. Horses and mules require a strong, nourishing hay which is found in alfalfa which has been cut while in full bloom; while cows, especially dairy cows, require a hay that is rich in milk-forming qualities which is found in alfalfa cut while tender, and, as I said, when about in one-tenth bloom. The ostrich is permitted to graze, and eats with avidity the tender growths of the plant.

I hardly think that cutting before bloom would have a detrimental effect on the vitality of the plant or materially shorten its life. Alfalfa is known to live for a hundred years, and under adverse conditions at that. Of course, cutting before bloom would give probably one extra crop, but such crops are not so heavy as fully matured alfalfa would yield.

In the Imperial Valley and in the Yuma Valley of Arizona no commercial or barnyard fertilizer is used upon the fields, for the very good reason that nature has provided the best possible fertilizer. The Colorado River, which furnishes all the water used for irrigation purposes in these parts, carries in suspension a large percentage of the most valuable fertilizers. In this respect our soil conditions are very similar to those of the Nile.

Bees gather great stores of honey from the bloom of the alfalfa in these sections. It commences to blossom in April, and continues well up into October. Many fields are allowed to blossom for seed. Such fields yield abundantly for several weeks a fine nectar. I have never seen nicer honey than that furnished by alfalfa. The flavor and body are present, and in color it equals most grades of choice honey.

On the desert plains and valleys all shoots of this plant grow to an equal height, so that, in cutting, all shoots are severed a short distance from the ground. All seem to start at once after cutting, and no short shoots are injured in cutting, as appears to be the trouble in the alfalfa grown in the East or middle West. This year I saw the first crop being mowed the 20th of March, and the last will be cut about the first of December. Cuttings may be had every five weeks provided water is judiciously applied.

I would not attempt to advocate for the

East the principles we adhere to in this sun-kissed land. Here we have less than three inches of rain per annum, very few cloudy days, and practically no night dews. A long hot summer is our lot, followed by a delightful winter season, if it can be called winter. I sometimes long for snow and rain, and, to use a slang expression, "can you beat that?"

Yuma, Ariz.

CUTTING ALFALFA

June Grass and the Alfalfa Weevil; Advice from Experiment Stations

BY JOSEPH H. PETERSON

As I have almost grown up in an alfalfa-field I will try to give you a little light on the question. Dr. Miller says that in his locality the young shoots that are to make the second cutting will be spoiled if the first cutting is delayed until full bloom. That is not true here. The second growth does not start until the first is cut unless it is left standing too long and given an extra amount of water. The second crop will not start here, as a rule, until it has had an irrigation, although this is often given just previous to cutting the first crop.

Farmers in this locality usually let their alfalfa come well into bloom before cutting, or would do so if there were nothing to interfere. The second cutting, which begins blooming the latter part of July, is nearly all left to bloom out fully, but the first cutting of late years is nearly all done in bud or with very little bloom. This, however, is not because it is considered the best time to cut, but to get the June grass, with which the first cutting is infested, before it ripens. This June grass, if cut early, makes fairly good hay; but it matures earlier than alfalfa, and in the mature state it is not eaten by stock, and is even injurious to horses. On account of this, and also on account of our new acquisition, the alfalfa weevil, the first cutting of alfalfa is nearly all done early.

We get three cuttings here, and the third cutting often blooms profusely before it is cut, and some years the bees get considerable late picking from it. The second cutting is our honey crop, especially where it is left to seed, as considerable of it often is.

The Utah Experiment Station has made some very thorough experiments in the past on the proper time to cut alfalfa (it is commonly termed lucern in this locality), and I quote a few conclusions:

"The digestibility of lucern remains practically constant from budding time to the period of full bloom."

"We may hold this conclusion to be right—that, to insure a large yield of dry matter and the largest amount of albuminoids, lucern should be cut not earlier than the period of medium bloom, and not much later than the period of first full flower. This, in most cases, will be two or three weeks after the flower-buds begin to appear. It will be a more serious error to cut too early than to cut too late."

The above is from Bulletin No. 58, Utah Experiment Station, "The Chemical Life History of Lucern," Part II., by John A. Wedtsoe.

Ogden, Utah.

CUTTING ALFALFA

Continuous Cutting of Immature Plants is Devitalizing

BY E. E. STARKEY

Dr. Miller, in *Stray Straws*, page 749, Nov. 1, says, "Wait till it is all in bloom before your first cutting, and the young shoots from the bottom (which shoots make your second cutting) will have grown so high that they will be spoiled at first cutting, or else you must set your sickle-bar so high that you will not get all of the first crop."

I live near midway of the Yakima River Valley where thousands of acres of alfalfa is grown, and much of this has been growing as long as fifteen or more years continuously on the same ground, and I venture to say that not one ton of lime has ever been spread in this part of the country; and, in fact, but little or nothing is done to aid the growth except to surface cultivate in the spring time and irrigate. Three cuttings per year are the general practice; sometimes four and even five cuttings are taken by those who keep cows, and *think* it pays to cut it while quite tender. Even if the cow does like it better while young, that fact does not prove that land cut over in this manner produces as great profit as where the good well-matured cuttings are taken, and the three cuttings can be each allowed to bloom from one week to ten days or even more (at this stage it is not "all in bloom"). Alfalfa, when left uncut, is a continuous bloomer for the greater part of a long summer.

My own experience during the past five years is that the shoots from the crown come at various stages when the water is supplied at irregular intervals, and I have concluded that the best method of securing heavy and best paying crops is to allow it to bloom until the field looks quite blue, say from ten

to fifteen days from the first blooms, applying water at the beginning of bloom, and not again until after cutting; then young growth is just getting started by the time the field is cleared and water again applied.

I am persuaded that continuous cutting while immature is devitalizing to the plant, and that where continuous cropping is desired, renewed strength is furnished when the plants are allowed to come to full growth, but not to the production of seed, as seed development greatly reduces the strength of the plant.

I am confident that, as time proves what is best, we shall find pretty well-grown crops and but little tender-plant cutting.

Prosser, Wash.

CUTTING ALFALFA

The Time for Doing this Depends on the Stock to which it is Fed

BY V. R. NICODEMUS

To my mind, alfalfa is the most alluring plant now under cultivation. Its high feeding value, both in digestible nutrients and in palatability, makes it a prize worth the best efforts of every good farmer. Fortunate indeed is that eastern farmer who has secured a good stand of plants on several acres. More fortunate still is he if he succeeds in cutting his crops at the proper time and getting them cured properly.

One important factor in determining the proper time for cutting is the animal to which one expects to feed it. For cows or horses, alfalfa may be left standing until in full bloom—better only three-fourths bloom—before cutting, and good results be obtained. But for hogs it is highly important that it be cut early. By so doing we lose a little, perhaps, in yield, and in the total digestible nutrients, but we gain immensely in palatability. If alfalfa is left standing too long its stem becomes woody and unpalatable. I remember that the spring of 1912 here was very wet, so that we were unable to cut the first crop of alfalfa until it had all bloomed full and broken down. When feeding this to our cows we found considerable waste.

Then there is another consideration. Early-cut alfalfa does not drop its leaves as readily as late cuttings. When one considers that about three-fourths of the digestible nutrients are in the leaves of the alfalfa plant, we readily see the advantage of early cutting.

Henrietta, Pa.

SOME COMMENTS ON RECENT STATEMENTS

Is the Wall of the Hive Porous?

BY R. F. HOLTERMANN

On page 822, Nov. 15, the question whether hive walls are porous is brought forward by Mr. A. S. Tarson. Let me say that I do not want an unpainted hive or super; but water or moisture does go through the sides of the hives. I *know* this because I have seen it after it came through. Now, do not be in too great a hurry to say that I am mistaken, or that I can not prove that statement, for I can.

I have wintered bees in cellars in years gone by; and when taking them out in the spring I saw on the sides of the hive patches of paint having the appearance of a blister. Upon breaking through this paint I found water underneath. Where did the water come from? It could not have come from the outside, or the paint could not have confined the water under it. It *must* have come from the inside of the hive, driven, in the form of vapor, by the heat of the bees into the wood where it condensed under the paint. The late S. T. Pettit had the same experience. I have seen cases of this kind when the bees were in his bee-cellar, and I have heard him speak of it.

It is not at all necessary that moisture leave the hive in such a way. If proper provision is made, there are better ways to take care of the excess of moisture.

This much I am prepared to admit: The more the bees propolize the inside of the hive, the less tendency for moisture to go through the side of the hive.

THE SMOKE METHOD OF INTRODUCING QUEENS

The discussions along the above line have interested me; but when a man like Mr. J. E. Marchant makes the statement, "You can run a queen into a colony that already has a queen by smoke, and the bees will kill the old queen and accept the newly smoked-in queen," I just wonder if he should not say, "may accept the newly smoked-in queen." If he is correct, the plan will be of great value to us.

Over thirty years ago a student of the late Henry Alley taught me how to introduce virgin and other queens by means of tobacco smoke. Up to the present time I know of no better way of introducing queens providing the colony has no surplus honey in the hive, and if it is not during robbing time.

In the first case it is a difficult matter to get all the bees under the influence of the tobacco smoke, and the smoke taints the honey. In the latter case I have found by experience that something, probably the

tobacco smell, seems to draw the bees to a colony which has been dealt with in the way necessary to introduce the queen, and the colony naturally falls an easy prey to robbers. This may not be the case with ordinary smoke; but even if it is, it would not be a serious obstacle if a new queen could be made to replace the old in this way.

THOSE LARGE SMOKERS.

Dr. C. C. Miller, in his kindly way, rather takes me to task for wanting a large smoker. "I'd rather waste time to load up two or three more times in a day than to waste a good deal more in way of strength by lugging around too heavy a smoker." It is bad to waste any thing. For instance, many people eat more than they require. That is waste of food; and right here let me offer a suggestion in connection with the problem of how to reduce the cost of living. It can safely be whispered to 95 out of 100 people that they should eat about half what they do, and this will cut their food bill in two, and this largely reduced demand will likely materially reduce the cost, perhaps cutting it another 50 per cent. Doctors' bills, too, will be smaller. The doctor who tells a patient that he overeats loses his practice; hence, to work it off one must take exercise. How shall we exercise? It would not do to work if we can help it; that is an economy adapted to poor people, so we (or, rather, they) take long walks; or if that is too much trouble they attach themselves to a club with a gymnasium.

Why not let this energy be expended in carrying about a smoker that weighs six or eight ounces, or even a pound, more? Dr. Miller, we judge by contrast. I have seen enough of all phases of life, and you have too, to know that this is correct. If I spend my time in a nice office, comfortably heated, I do not appreciate very highly a heated home. But send me out during a November day with a team and lumber wagon, and a load, and let there be a cold rain, and I will gladly, when the day's work is done, find refuge in a log shanty with a fire in a smoky stove and a candle sticking in an empty bottle. So, doctor, when you have an eight-frame hive you rejoice when the honey crop is light, and muscle and exertion are not wasted in lifting a larger crop. Or if the bees will swarm and put the rest of the honey crop into another hive, that pleases you. You would say, "Well, well! This saves muscular exertion: I'd rather load up two or three more times," etc. One soon becomes accustomed to the heavier smoker, and, within reasonable bounds, thinks no more of operating a smoker weighing 2 lbs. or even 2½ lbs. than one weighing half a pound less.

Time counts during the busy season of the year. After handling twelve-frame hives, an eight-frame seems like a toy; but it is a source of pleasure to get a heavy crop, even if we have to lift it and handle, and it is a source of satisfaction to have an implement to smoke the bees with when a gain is made in the day's work. Now, I would suggest that those who would like a larger smoker than the one now on the market "shower" GLEANINGS with post cards. I feel sure that many beekeepers do want larger smokers; and even if they do not it would not change my view.

Brantford, Canada.

BEES ENTERING COMB-HONEY SUPERS

No Trouble During a Honey-flow

BY FRANK M'MURRAY

Mr. J. E. Hand, Nov. 15, page 805, has an interesting article on section-honey production, which is based upon the assumption that bees have a natural dislike for work in section-honey supers.

Acting upon the generally accepted theory that bees dislike a section-honey super on account of its subdivided and crowded condition, I have experimented in various ways to overcome this supposed dislike. I have tried four-beeway sections in connection with various forms and sizes of perforations in separators, only to find that in many cases my work was undone by the bees closing the openings with wax or propolis, many of which were much more than beeway size.

My latest experiment was with slatted separators, and the openings in these I found entirely filled with wax and propolis in most supers.

These experiences, taken in connection with the well-known fact that bees do not hesitate to fill the small space between top-bars and cover with comb and honey, if no other room is provided, have forced the conviction upon me that the dislike of bees for a section super (if any) must be accounted for in some other way than its crowded and subdivided condition.

I am a section-honey producer, and I can charge none of my failures to dislike of the bees for work in section supers; but they are all chargeable, first, to a shortage of nectar; second, to excessive swarming.

When nectar is plentiful, I find that ninety per cent or more of colonies enter the section supers gladly; and the remaining ten per cent or less I either requeen or "bait" with an unfinished super. I use half-sheets of foundation at the top of

sections, and the short Dr. Miller starter at the bottom, with from one to four "bait" sections in the first supers put on in the spring.

The first consideration in honey production is nectar. Let beekeepers look well to their local honey environment. Let them cause two honey-producing flowers to bloom where there was only one before, by seeding waste lands with honey-producing plants. Let them co-operate to see that no bee-range is overcrowded, and all other difficulties will become small—very small.

I do not doubt the practical success of Mr. Hand's proposed method; but I do believe it involves loss of time and energy, both for the bees and their keeper.

Aurora, Mo.

THE FOOD VALUE OF SUGAR AND HONEY COMPARED

BY E. P. ROBINSON

On pages 629 and 633, Sept. 15, are comparisons of honey with sugar, beefsteak, fruits, and vegetables, all favoring honey. It is an old saying that "comparisons are odious," and surely in these cases they could be fairer. It reminds me of the claims of the rice-growers' association as to their product—a poorly balanced one.

There is little doubt the American people eat far too much sugar—probably about five dollars' worth a year per capita. If four dollars of this were expended for honey the health of the people would be better, not wholly because of honey being more wholesome, but because so much less sweetening could be bought with the money, the honey costing about three times as much per pound as sugar.

The only just way of comparing food materials is by their analyses. The following figures are interesting as showing the

nutritive values of some of the least as well as most nutritive food stuffs:

The food value is obtained by multiplying percentage of protein and carbohydrates by 1860, and fat percentage by 4220. The average American diet has been determined by our nutrition experts as about 17 per cent protein, 25 per cent fat, and 58 per cent carbohydrates. More protein is needed by the growing child and man at hard labor; while less is needed by the aged or idle.

The figures show honey as one of the luxuries, along with cheese and butter, rather than as a staple everyday food of the masses like potatoes, bread, crackers, sugar, and rolled oats. Maple sugar and syrup are in the same class with honey, analyses similar, and costs not far apart.

That any of our fruits or vegetables average 95 per cent water, as stated by the *Farm Journal*, I can not believe—even watermelon being only 92.4 per cent.

Mr. Terry's statement that honey is more wholesome for sweetening oatmeal than sugar is true; but what oats need is more fat, not more carbohydrates, the principal element of both sugar and honey. Either of these added to oats further unbalances it as a ration, while cream or butter balances.

Packer, Ct.

[The consumption of sugar per capita is much greater in this country than in Europe, for instance—probably because we make so much of it—and a great reaction is bound to come. Already public sentiment is deploring the abnormal use of sugar. Sugar is more convenient as a means for sweetening than honey—at least most people consider it so, and then it is somewhat cheaper.

Beekeepers and honey salesmen should take the greatest pains to point out that honey is *not* a cane sugar, like maple syrup, etc. It is a fact that a great many doctors do not know this.—Ed.]

	Cost	Water per cent	Protein per cent	Fat per cent	Carbohydrate per cent	Ash per cent	Value	Value per cent

Heads of Grain from Different Fields

Insectology

Of work the bee is not afraid,
And hard times can't expel it;
For when it gets its honey made
It knows just where to cell it.
—*Cincinnati Enquirer.*

Then take the case of Mister Fly,
Pursued with noise and clatter;
When he observes one's hand on high,
He knows just swat's the matter.
—*Denver Republican.*

Consider, too, the little gnat;
He's fortunate in that he,
Whate'er the styles are—thin or fat—
Can manage to look gnatty.
—*Chicago Inter-Ocean.*

And also there's the tiny flea,
So thrifty and well fed;
You grab him where he seems to be,
And find the flea has fled.
—*Peoria Journal.*

And there's the little redbug, he
Is always well and hearty;
He has no stinger like the bee,
But he's ten times as smarmy.
—*Houston Post.*

Is it Practicable to Ship Bees in a Refrigerator Car?

I write to ask what data you can give about shipping bees in a refrigerator car with ice. I have been shipping for years, but do not find shipments made in cattle-cars to be altogether successful. How did you make your shipments last year from Florida? The question in my mind is, whether ice will keep down the temperature sufficiently when the circulation of air must of necessity be poor. That the darkness of the freezer would tend to keep bees quiet so that they will not generate so much heat, I can readily see. But that the ice can absorb the rest of the heat fast enough I can't see so plainly.

Your scheme of shipping to Florida is all right. I am going to do the same thing, except that my chosen land is southern California. If there is sufficient rain to start early pollen I expect to get quite a crop of orange honey. Crop or no crop, I am sure of making 100 per cent increase, and most likely more.

There is some difficulty in getting queens mated on account of high fogs in California; but ordinarily one can make three nuclei out of each hive. I aim to have three or four frames of brood and plenty of bees in a ten-frame hive containing seven combs in all, the other space left for clustering-room. Then comes the question of shipping.

Now, if those nuclei could be brought through intact by May 20 they would do finely; but so many bees die in each one, and so much brood is lost, that it requires a month's time for them to build up. Please understand they are given water too, either *en route* or before starting. But the light in a cattle-car keeps them so excited that they soon evaporate all the water given in their combs, and eat brood besides.

Now, I want to try a freezer to avoid the loss of larvæ and old bees. If icing will actually do it, the knowledge will save many a dollar to several of us Western shippers.

Hansen, Idaho, Nov. 17. G. C. MATTHEWS.

[We question very much the wisdom of using a refrigerator car to keep down the temperature of the bees. We have had no difficulty in several carload shipments of bees, and we have never used any ice to

cool them down. The important thing is, plenty of water along the route. A man must go with the bees, of course, and he must water them whenever they get to roaring. A little practical experience, however, will determine when the bees need water; but it must be given much more often during hot weather than one would ordinarily suppose—sometimes every hour or so.

It is not quite clear to us from what you say whether you supply the bees with water at the start in the combs themselves, or whether you send a man along to give them water every now and then. We should infer, however, from the fact that you lose so much brood that the bees have only water at the start, and that in the combs. This is not sufficient, because bees will use up an immense quantity of water.

Two years ago this coming spring a carload of bees from Florida *en route* about eight days would take up a barrel and a half to two barrels of water. We have found in both cases, where we have supplied water plentifully, that not a particle of the brood was destroyed; that even queen-cells hatched out, and apparently queen-rearing would go on just about the same as it would ordinarily. Even uncapped queen-cells were capped over and hatched out *en route*.

You are referred to our article in this issue on shipping bees in car lots. We use during the colder weather, when we are shipping bees from the North to the South, a fruit-car. This has doors at each end, and, of course, doors at the side as usual. During the hot weather we use cattle-cars. The main thing is to keep the bees supplied with water and the car moving. When a car stands on a siding, and the sun shines on the side of it, the bees get very noisy. It is then necessary to put up a canvas on the side next to the sun, and at the same time the bees must be very liberally watered. A good wetting down very frequently keeps them quiet; but it is very important to get in touch with all the railroad officials along the line, to the end that the car may be moved promptly, and on fast freight trains, so that there may be no delay between one freight train and the other. As far as possible, secure a through freight. There is not a particle of need of losing any brood, and that, too, without the use of ice.—ED.]

Making Increase in September

The first of September I had five colonies of bees that were crowded in the brood-chamber until they were clustered on the outside of the hives. The honey-flow in this section was over, so I decided to try a new experiment. I opened each of these five hives; and when I had found the frame that the queen was on I placed this frame, queen, bees, and brood in a new hive with full sheets of foundation, and then I moved the old hive to a new place and put the new hive with one frame of bees and brood, and the old queen where the old hive had been. The old workers, of course, all went into the new hive where the queen was. These new colonies I fed freely on sugar syrup, and by the last of September they were well filled up with winter stores, had a fair supply of brood, and at this date, Nov. 12, there is still unhatched brood in them.

The five old hives that I made these five new ones from were queenless the fourth day after removing where the queen was. These new colonies I fed freely cells, and gave them eggs from my choice queens. Each of them raised nice queens; but one of the young queens was lost in her mating-flight. I then united this colony that was queenless with the one that I had taken from it. They united without any quarreling whatever; and by this uniting I had some

extra frames to help finish up some weak colonies with winter stores.

The first of November, when examining my bees and putting them in winter cases on opening the hive where the most prolific queen I had was (she being one year old, and the only hybrid in my yard) I found the bees had begun to ball the queen. I blew some smoke on them, and scattered all, but two bees refused to let her loose; and before I could get them away from her one of the bees had stung her. I then put the cover on the hive and placed the queen on the light board in front of the hive. Just as soon as I put her down the bees attacked her with increased fury; but by the use of the smoker I helped her to get into the hive. Then in about thirty minutes I opened the hive and found the queen well balled on the bottom of the hive, and almost dead. I then finished killing her and left them queenless until the next day; then I united them with another colony, which was done with but little smoke and no fighting.

In both cases of uniting above referred to I put the bees in a different hive from which either colony this larger space!

Dott, W. Va., Nov. 12.

H. INGRAM COOK.

[As a rule it does not pay to attempt to make increase in your locality as late as Sept. 1. Much depends upon the weather and on the honey-flow; but usually it is safer to let the colonies remain strong. One rousing good colony stands a better chance of wintering safely than two colonies only medium in strength. Furthermore, unless a special effort has been made to keep plenty of vigorous drones in one or more colonies the young queens are likely to remain unmated.—Ed.]

Making Honey Vinegar

I have decided to make vinegar out of the sour honey. I looked up the recipe in the A B C of Bee Culture, but there are a few things that I don't quite understand in regard to it.

1. About how long does it usually take to make good vinegar?

2. Could it be made now and left in the cellar this winter, or would it be better to wait until next summer and make it outside when it is warm?

3. If made now, would it be harmful to bees that are being wintered in the same cellar with it, and would it affect sealed jars of fruit?

4. Will good syrup-barrels be good enough to put it in? Should the whole head of the barrel be taken out, or will it do just as well to leave the bung open and cover with fine wire cloth or cheese-cloth?

Hopkinton, Iowa, Oct. 27. A. R. SHEARER.

[The above was referred to Mr. E. M. Nichols, of Lyonsville, Mass., who replies as follows:]

It will take from two to four years to make good honey vinegar if one fills a barrel or cask with honey properly reduced with water, and allows it to go through the natural change to acetic acid, or vinegar.

If you have a quantity of honey you wish to make into vinegar, a better way for you to do is to place a cask, capacity 45 to 50 gallons, in a warm room, temperature 40 to 50 degrees Fahrenheit; lay the cask on its side with the bung hole up and covered with cheese-cloth. If the barrel stands on one end with one head out, there would be a larger percentage of loss by evaporation. The cask should be filled about half full of good vinegar, then add ten quarts of fermented liquid once in about seven days. When the cask is full, draw out about half of the contents and continue the process. In preparing the sweet liquid I prefer rain water to put with the honey, and have the liquid about as sweet as for a sweet drink; or one can determine this by either method mentioned on page 592 in the A B C and X Y Z of Bee Culture. When this liquid is first prepared it contains a per cent of sugar; when it is allowed to

ferment, it then contains alcohol, and the alcohol is converted to acetic acid by the cask process. This same method of making vinegar can be used on a smaller scale if one wishes.

There will be no harm in storing honey vinegar in the same cellar with bees or sealed cans of fruit.

Color of Drones from Mismatched Bees

On page 548 Mr. Albert Swanton asks if queens mated by black or German drones don't produce black bees and drones. Your answer is that a queen mated with a black drone will give both bees and drones, mixed blood. Now, I suppose you and Mr. Swanton mean a pure Italian queen will. I have always understood that the mating has nothing to do with the drone offspring; that is, if the queens were pure Italians. All her drone brood would be pure Italian, no matter what kind of drone she was mated with. If I am not correct, put me straight.

DEEP SPACE UNDER FRAMES UNDESIRABLE.

Again, page 517, your correspondent advises a space of one inch or more between the floor and bottom-bar. My experience has been that, if over $\frac{1}{2}$ inch is allowed, bees will build combs, and give a lot of trouble. Again, what is to be gained by giving this larger space.

Hempstead, Tex., Aug. 12.

G. T. RAWLS.

[Our answer, page 548, was, perhaps, not complete. The orthodox teaching is that the drones from a pure Italian queen, even if she be mated to a black or hybrid drone, will be pure also. A few, however, take exception to the statement; but unless we can get better proof to the contrary we shall have to accept it as true.

This question of a deep bee-space under the frames hinges somewhat on the locality and the strength of the honey-flow. We use an inch space under our frames—that is, between the bottoms of the bottom-bars and the floor of the bottom-board; and it is rare indeed that bees build comb in the space, and we have had some pretty strong honey-flows also. The great advantage of this extra space is the providing of better ventilation; and better ventilation means less swarming. Of course, one can have a deeper entrance with a $\frac{3}{8}$ space under the frames; but the ventilation will not be nearly as good by considerable. The tendency of the beekeeping world now is toward a larger space between the bottom-bars and bottom-board, and larger entrances, and mainly because of the reduction in the swarming; and while it does not stop it, it discourages it.—Ed.]

Raising Queens in Upper Stories

I have been reading again some of last year's copies of GLEANINGS, and came across an article by G. J. Yoder on making up winter losses, May 1, 1912, page 281. Could you shed a little further light on the subject? I have raised a few queens in this way, but have to remove them just before they hatch, otherwise they simply disappear. On only one occasion was I really successful in getting a queen mated from an upper story, and in this case an excluder was placed on the first story, and a wire screen on the second. The queen mated from the third story, and is now doing well. It seems that an excluder on the first story is not sufficient, even when the queen is raised in the third. Does this raising of queens in supers lead to swarming, especially if done in the swarming season?

FRED E. WHITE.

North Vancouver, B. C., Sept. 19.

[One can raise cells in the upper story of a strong colony very easily; but there are some important requirements, even to do this. The upper story must be separated from the lower one by means of an excluder. There must be a light honey-flow, or a feeder on the hives, for the bees must be kept in a high state of prosperity. Moreover, bees will not

start cells, as a rule, in these upper stories; but they will finish and cap over those that have been already started.

Queens can be mated from an upper story with perforated zinc between the two parts of the hive; but ninety-nine times out of a hundred the plan will fail. The only way to make it work at all is to use a wire screen between the upper and lower stories, and then use a separate entrance to the upper story, preferably in the rear.

Yes, rearing cells in the upper story has a tendency to incite swarming. The presence of a large number of cells ready to hatch within a few days will start up a swarm as nothing else will do except an overcrowded condition of the hive and lack of ventilation.—Ed.]

Do Bees Steal Eggs?

This question has been discussed pro and con for years; but it is not my intention here to undertake to settle it nor even to express an opinion. My whole object in writing this is merely to record an interesting case that came to my attention.

On May 15, 1913, in company with Thos. Parker, of Bedford, Iowa, I drove to the home of J. H. Fitch, who has a fine apiary in Danzenbaker hives near Bedford. Among the hives examined was one containing a drone-layer. The hive was full of drone brood and drones, with but comparatively few workers. Not a trace of worker brood could be found within the hive. On one of the frames Mr. Parker found a sealed queen-cell, and on the opposite side a partially built queen-cell. We were very much interested to know whether this cell contained a drone larva, such as often happens in such colonies. We decided that in case the cell really contained a female larva there was no way to account for it unless the bees had secured a fertile egg from some other colony.

On June 26, a little more than a month later, Mr. Fitch wrote me that the cell had, in fact, contained a queen, and that there was at that time sealed brood in three frames. He said that the queen was a very fine-looking one, and the colony gave promise of prosperity.

This is the most striking instance of this kind that ever came to my attention, for the old queen was very plainly a drone-layer. I have heard of similar cases, but this is the most puzzling one coming under my own observation.

Atlantic, Iowa.

FRANK C. PELLETT.

Does the Caging of a Queen in Her Own Hive Cause the Building of Queen-cells?

If an old or laying queen be caged and placed in her own hive, will the bees build queen-cells the same as though she (the queen) were taken out altogether? And may that queen be liberated again in her hive at any time? or must one of the plans for introducing be followed out? Must all queen-cells be removed before she is liberated or introduced?

If the queen be caged, and placed in another hive, will she be fed by those bees the same as she would be were she caged and placed in her own hive?

Berne, Ind., Nov. 20. MOODY BRENNEMAN.

[One can cage a queen in her own hive, and the bees will feed her, and at the same time build cells; but a strange queen caged over another colony that already has a queen, probably will not be fed. A dozen or so queens may be caged over a colony that is queenless, and the bees will feed some and not others; that is to say, they will select out one or more queens which they seem to accept, and to smear the wire cloth of the other queens over with bee-glue, thus smothering them to death.

A queen may be kept caged in her own hive if kept queenless for a month or more; but it might be advisable in any case to have a little candy. In the

case of a strange colony it is very important to have candy, especially if that strange colony already has a queen at large in the hive. If there is, therefore, but the one queen in the hive, and she has been caged for some time, she may be liberated any time providing no virgin has hatched from one of the cells. If there are capped cells, as a matter of precaution they should be cut out before the queen is released, or the bees might kill the queen, knowing that young virgins would soon be due. Bees will very often seem to prefer a prospective virgin to a laying queen.—Ed.]

Parcel Post in Germany

In Germany the charge for a package up to 11.1 lbs. is the same, be it one pound or eleven. The minimum charge to a distance not over 10 miles is 6 cts.; for any greater distance anywhere within the empire the charge is 12 cts.

The post accepts parcels up to 111 lbs. For each kilogram over five kilograms the following charge is made:

Within the first zone, not over 10 miles, for each additional kilogram, 1 1/4 cts.

Within the second zone, not over 20 miles, for each additional kilogram, 2 1/2 cts.

Within the third zone, not over 50 miles, for each additional kilogram, 5 cts.

Within the fourth zone, not over 100 miles, for each additional kilogram, 7 1/2 cts.

Within the fifth zone, not over 150 miles, for each additional kilogram, 10 cts.

Within the sixth zone, over 150 miles to anywhere within the empire, for each additional kilogram, 12 1/2 cts.

Packages of very large dimensions, baskets with plants, cages with animals, etc., there is an addition of 50 per cent to the regular charge. Five kilograms is called a *post parcel*. This term is commonly used in advertising honey. The price for the post parcel containing 4 1/2 kilograms honey includes the carriage and C. O. D. charge usually. The C. O. D. arrangement is a great convenience. The postoffice makes for the C. O. D. an extra charge of only 2 1/2 cts. over the amount the money order would cost. The party receiving the package pays the cash, but has no address to write, while the sender knows he will get the amount of his bill without delay. Goods and honey are usually sent C. O. D.

The package for honey used is a tin pail with a cover that fits water-tight. As a rule the honey sent by parcel post is crystallized. Although the pail will hold the liquid honey, yet the hauling is not gentle. For a greater distance the only safe way is to wait until the honey has crystallized. The pails are filled with liquid honey, and set aside for crystallization. No wrapping is necessary.

Markt Oberdorf, Bavaria, Germany, Nov. 8.

Not One Failure when Introducing by the Smoke Plan

I have just read the Nov. 15th issue, and say amen to J. E. Marchant's article, page 804. I really believe this smoke plan to be the best thing ever given to beekeepers for the introduction of laying queens and virgins. When friend Miller's article first appeared in GLEANINGS it made me "sit up and take notice," and the next day I introduced a laying queen to a strong colony after first removing the queen they had; and bad weather came on so that I was unable to look into the hive for a few days; and when I did I found the queen all right, and she was laying in good shape. The plan pleased me so much I wanted to go further, and so I introduced a queen to a colony which I found queenless and having queen-cells well under way. This was also a success. I then tried virgins, giving them to two and three frame nuclei.

I want to say right here I think any one is apt to fall down unless he is careful in the way the queen is run in. Referring to the danger mentioned in an editorial in the September 1st issue, when introducing to small nuclei, of having the queen run away into some corner or away from the combs, I will say that I always remove the entrance blocks at the side near the combs and let the queen run in at the corner, then replace the block, and upon examination I have never failed to find the queen upon the combs and at home. I have never had one balled yet.

I have not had a chance to try this method on laying workers, but will in the near future if the opportunity presents itself. Some of our old beekeepers are shy about trying this method, and seem afraid of losing queens by it; but we have got to try things out if we ever expect to get anywhere in this world. I have introduced queens for other beekeepers by this method with the best of success, and I am firmly convinced that it is the quickest and best method given yet, and also the safest if properly done. It certainly means a big saving of time and money to all who try it, queen-breeders especially.

Berlin, Ct., Nov. 21.

A. E. CRANDALL.

Queens Introduced by the Smoke Method are Laying the next Day

Regarding the smoke method of introducing queens, I will just state that I have been using that method for the last twelve years, with the result that I have generally succeeded in introducing successfully about 100 per cent of my queens. About ten years ago I wrote an article for the *Western Bee Journal* detailing said method of introducing, at which time I did not know who was using that method. Previous to this I had always observed the directions for introducing, and, as a result, I lost about one-fourth of my queens.

One thing I wish to say about the smoke method is, it must be used with caution. An overdose is cruel, and, if given during a honey-dearth, you will find plenty to do protecting the hive from robbers.

Another advantage which is important is, the queens are laying the next day.

Bakersfield, Cal., Nov. 8.

F. D. LOWE.

Sending Honey by Freight C. O. D.; Plain Simple Business Directions to Those who are Shipping to Strangers

I sell most of my honey by correspondence, or, in other words, I do a mail-order business. When shipping to strangers I ship to shipper's order, bill of lading attached. I have had one or two shipments refused because the railroad agent refused to let parties inspect honey before signing a draft. Others (from letters received) think it shows disrespect to them to ship in that way. How do you manage this? I can't afford to ship to strangers with straight bill of lading, as I have had trouble collecting that way.

Llano, Tex., Oct. 2.

L. B. SMITH.

[In sending freight of any kind, draft attached to bill of lading, if you desire the consignee to inspect the bill of goods you must make that proviso in the bill of lading, otherwise the railroad agent has the right to refuse the consignee such privilege.]

In sending stuff C. O. D., either by express or freight, one has to run the risk of offending a possible future customer who will pay cash. If his bank standing or credit is good he is more apt to take such offense. It is usually advisable to go to your bank and ask if it knows the financial standing of the parties to whom you propose shipping your goods. If they can find no rating in Dun or Bradstreet whatever, or if the rating is unsatisfactory, you will be compelled, if you ship at all, to send goods draft attached to bill of lading.

In all transactions of this kind it is usually best to ask the prospective customer, in the first place, if unknown to you, to furnish references. This is an ordinary plain business requirement; and if business men, and in particular beekeepers, would take this precaution they would avoid a lot of bad debts and, very often, bad feelings of a sort that means no future business. Any man who is offended because you require references should be avoided, for no responsible person objects to it; and it is not always wise to presuppose that parties referred to would give the proposed consignee a satisfactory rating; so it is best to write one or more of the references. It may consume a week's time, but it may save the price of a crop of honey.—Ed.]

Melting up Extracting-combs Taken from Foul-broody Bees

I wish to know whether it is advisable to melt up all extracting-combs taken from foul-broody bees. What percentage of a yard of forty colonies (nearly all having it, but most of them fairly strong in bees) would come through the winter?

SUBSCRIBER.

[We certainly would melt up all combs affected with American foul brood. Combs from a European foul-broody colony may be used again; but we would advise melting them up also to be on the safe side.]

Foul brood, either European or American, will not affect the wintering of a colony of bees unless it reduces its strength in the fall. Many hives affected with either disease will have only a few cells of dead matter. Such colonies will winter as well as the average normal one, other things being equal. But if a stock has foul brood very badly, so that its strength is reduced, it will die, probably, during the winter and the following spring; for as soon as the bees can fly, other bees will rob out these diseased combs, thus spreading the infection far and wide. This is precisely the manner in which American foul brood is spread in many cases.—Ed.]

Making Increase by the Alexander Plan

I have a few colonies in ten-frame shallow hives, two of which make up one brood-nest. I should like to know the best way to manipulate these hives for increase, following the Alexander plan, or any other more suitable to meet existing conditions. I have plenty of shallow frames with full combs or foundation. I am prepared to buy queens if advisable. The honey flora is plentiful, consisting of dandelion, fruit bloom, clover, smartweed, melilotus, and fall flowers.

SUBSCRIBER.

[We would advise you to follow the Alexander plan, which plan we have given several times in these columns. You will also find it given under the head of "Increase" in our A B C and X Y Z of Bee Culture. Your increase will be much more rapid if you buy queens, of course; but it is more economical to raise one's own queens. However, in some localities there are so many black bees that pure stock can not be raised, and for that reason, if for no other, it is better to buy queens and thus have pure stock.—Ed.]

Information Wanted Concerning One of Mr. Langstroth's Relatives

Have you any information as to where Miss Saddle Langstroth can be found? She is the daughter of J. T. Langstroth, and granddaughter of Rev. L. L. Langstroth. Her cousins have tried to find her for several years, without success. She probably is married, and under another name.

Holyoke, Mass.

HERBERT F. DAVIS.

[If any of our subscribers or readers can furnish Mr. Davis the desired information we hope they will do so.—Ed.]

Our Homes

A. I. Root

Go ye into all the world, and preach the gospel to every creature.—MARK 16:15.

"DARKEST AMERICA;" HOW TO GROW IDIOTS AND IMBECILES.

I have recently been talking to you about "starving America;" but now we have something that confronts us that might well be called "darkest America." In this day of great progress and wonderful enterprise we have not only whole farms but whole regions devoted to growing separate things. A great part of Michigan is devoted to growing white beans; and in riding through these big bean-farms one might almost think Michigan could supply the world with this great staple. Then we have great egg-farms; cranberry-farms; and just recently I spoke to you about fox-farms for growing furs for fashionable women. But I believe none of you ever heard of not only a farm—and may God forgive us—but a whole region for growing—what do you suppose? *Imbeciles, idiots, paupers, and criminals.* Read the following:

Mr. Root:—Read the piece marked in inclosed page of *Atlanta Journal*, and say if you don't think missionary work is badly needed there.

Moultrie, Ga.

J. E. WILLIAMS.

Below are some clippings from the article submitted to me. As the article was of too great length for our pages, I have simply quoted the three first and three last paragraphs. If you want the whole of the officer's statement I presume the editor of the *Atlanta Journal* will be glad to furnish you. Ask for their issue for September 14.

"Why do the good civilized folk of America ignore a countryside people with adults who are mentally children; strong self-willed men and women of native stock who are without reason, judgment, or self-control?"

Miss Elizabeth Kite, State agent for the New Jersey School for Feeble-minded, put the question with a finality that accused. "You doubt the possibility? Then come with me to the Pines. You will find the district a plague-spot of moral contagion—a feeder for our jails, almshouses, and hospitals."

Next morning found us motoring through a lonely tract of 2000 square miles between the barren coast of New Jersey and the fertile Delaware Valley. This area of scrub cranberry-bogs and salt marsh is peopled with families of degenerates.

* * * * *

"Aunt Lil" was a little girl of twelve when her first baby was born. So was imbecile Louise. So, think of the awful pity of it, were a score of women in the sand-holes.

Consider the intermarried Dixon-Osborn clan, 199 individuals, of whom 13 are normal, 124 degenerate, 20 illegitimate, and 22 criminal, living on the outskirts of a country town.

Imbecile Betsie married defective Zacher, and became the mother of nine feeble-minded children, 12 feeble-minded grandchildren, 23 feeble-minded great-grandchildren. Of these, one died in infancy, eight lived in public institutions, no one knows how many

went to jail. One granddaughter, Mag, bore eight illegitimate children.

Can all this be really true in our United States of America? I devoutly hope it is not true, and that it has been largely gotten up for the "Sunday edition" to make a sensation. However, a large part of it must be true. Will the readers of *GLEANINGS* who are competent to tell us something more about it give us the facts?

I believe every one of our Protestant churches is supporting several missionaries in foreign lands. We have been priding ourselves that the great wide world has been pretty nearly canvassed; that there are very few places in Africa, South America, or the remote islands of the sea, where the Bible has not been placed and the gospel preached; but these people, as we learn from the part of the article I omitted, can neither read nor write. If this is true, what about the enforcement of our laws for compulsory education? Do not these just and righteous laws include *every portion* of the United States? There are public institutions for the care of idiots and feeble-minded in that vicinity, for the article alludes to them. Where are our missionary societies? Does the A. M. A. of the Congregational Church know any thing about it? I ask the question because I have in years past given it thousands of dollars to attend to just such cases as these. We have been told for years past of their great work among the "mountain whites" of the South; but the mountain whites can read. Booker Washington, in his great work among his people, does not mention ever having found a condition among the colored people anywhere equal to this. Our missionaries in Africa have never told us any thing to equal it. In this region the marriage ceremony is a dead letter. These people are "swapping" wives indiscriminately; and some poor mothers, who have children by different fathers *still living*, when they protest about being swapped about in this way are obliged to put up with it. If it were somewhere *away off*, we might shirk a great part of the responsibility; but this tract, covering ever so many square miles, is right in the neighborhood of Philadelphia, Baltimore, New York, and last, but not least, Washington. Can not something be done to stop *breeding* children from idiotic and imbecile parents? The *Atlanta Journal* gives a picture of a whole family. The father can neither read nor write, and the mother is an imbecile. The terrible responsibility rests on every

one of us, including you and *me*. No wonder we have awful crimes when we as a nation are *contributing* to the breeding and peopling of our country with idiots and imbeciles. The women are all mothers with large families, as you might suspect they would be; and where they have sense enough to know their condition they are groaning under their burdens. Where is the W. C. T. U.? where is the Salvation Army? where is the Y. M. C. A.? where are our Endeavor societies and our other societies of like import?

May the Lord be praised that he has permitted me through the pages of this department of our journal to take up and hold before the world conditions of this kind! Once more let me say it, we are making wonderful progress in improving our farm products; we are also making great progress in improving our domestic animals. Our experiment stations are showing us how to build up just the kind of horses, cattle, sheep, and even chickens, that we want. We have stopped raising scrubs, and are giving our time and attention to only the best improved varieties. There has been a *little* talk about better, brighter, and more intelligent *mothers* (yes, and *fathers* too), that we may fill our schools and finally our great nation with better and brighter men and women. May God help us to look after the *babies* that are being born and which are *going* to be born. And, finally, let us remember the responsibility placed on every one of us who is a follower of the Lord Jesus Christ to "go into all the world, and preach the gospel to every creature."

HUMANITY; WHAT ARE WE DOING IN THE WAY OF "SELECTING" BETTER FATHERS AND MOTHERS?

Did it ever occur to you how this present generation is going? Instead of the well-to-do people and those rich in "gray matter" populating this land of ours, it is the poor, and in many cases those who are lacking in intelligence. The rich and wise rear from only one to two children, while the lower classes are bringing up large families. What will this world come to at that rate? E. W. T.

Let me suggest to the good friend who sends the above, and asks to have his name omitted, that somebody recently called my attention to the fact that the children of millionaires, whether they happen to be few or many, are generally "no good." In other words, if a child is brought up with the understanding that his environments are such that he "don't *have* to" work for a living, this one thing too often makes him a useless "dude." And now if this is true, are affairs in such a *very* bad shape after all? Our great men and great women not only often come from humble surroundings, but

quite often, indeed, where the parents are poor, and have *large families*. Does it not behoove us then to be *sure* we are right before we push ahead too vehemently?

HOOKWORMS IN FLORIDA, ETC.

On page 391, June 1, I said, in speaking of the hookworm: "If this disease or parasite exists in the part of Florida where we are located, I have not heard of it." In the midst of a business letter from a man who is well able to speak understandingly in regard to Florida (for it has been his home all his life) he writes as follows:

Hookworms are a very common pest in Florida, and numbers of people are afflicted with them. It is much more prevalent than you think. Perhaps 20 per cent of all the people in the State are rather badly afflicted, some very badly. It can be stamped out easily by proper precautions as to closets and insisting on children wearing shoes. Still, it may be that it is spread by cattle and dogs. I have heard that this is so.

I do not care to be quoted, but you may use the letter if you desire, and say "name given on special request." As to the doctor's examination of the school children, I do not know if that was paid for by the Rockefeller contribution or not, but presume it was. I am doing all I can personally in talks with home people as well as chance acquaintances to impress the value of treatment against hookworms. The natives seem rather to resent the idea of these worms; but I clinch the argument by telling of results from our own boys' treatment.

I hardly need tell you that there is a large class of people, and especially real-estate dealers, who object to the publication of any thing like the above; but the good of humanity and the good of Florida people, especially the children, demands that they have the facts. There was considerable sport at one time, about Mr. Rockefeller's great gift; but you will see from the above that he well knew what he was talking about and what he was doing. I have also been told that people who are badly afflicted in this way, especially ignorant and colored people, absolutely refuse to go to a doctor. If I am correct, almost any physician is fully posted in regard to it, and will be able to detect the symptoms and apply a remedy.

ROACHES IN FLORIDA; HEADING THEM OFF.

While I am writing I wish to mention that, if Mr. Root doesn't want the roaches to eat the labels from his bottles, he should put the label on the bottom of the bottle.

Flemington, N. J.

J. P. HOHMANN.

My good friend, your remedy will work if the bottles do not get tipped over; and, besides this, it is a great deal handier to have a label where you can see it without lifting the bottle. I presume poison might be added to the mucilage by the label manufacturer or whoever makes the paste when the labels are applied.

Notes of Travel

Know ye not that your body is the temple of the Holy Ghost?—I. COR. 6:19.

I have all my life loved to travel, because it gives me such an opportunity to study humanity, or, if you choose, to study my fellowmen; and I especially enjoy seeing the progress that is being made toward *uplifting* humanity. I want to see especially what progress is being made, not only here in America, but throughout the whole wide world, in looking after the health and morals of humanity. Our great railways are spending not only thousands but millions toward giving more and better comforts to the countless throngs, high and low, rich and poor, that seem to be *always* traveling somewhere. It has rejoiced my heart every time I leave home to see the improvements going on. Our readers may recall the vigorous protests I have made from time to time (for forty years or more) against filthy toilet rooms and closets. It just begins to dawn on me that God, in his merciful love, gave me that "thorn in the flesh" (see Homes for Nov. 15) that I might keep better posted, and be better able to make public protest against shameful vandalism.

When I see a great new union depot in any of our big cities I am at once curious to know whether they have considered the matter we are now discussing, and how much *money* they have invested in it. For years I was disappointed; but now (thank God) there seems to be a glorious awakening. To illustrate: At Jacksonville, Fla., in the large union depot, there are plenty of clean tidy closets, and notices conspicuously placed, reading something like this: "Tobacco in any form must not be used in these apartments;" and, again, "\$25.00 fine for mutilating or disfiguring any of the furniture; this is a penalty enacted by law."

To enforce the above I think a porter is stationed; and this porter furnishes soap and paper towels for a nickel. Somewhere I have seen paper towels for a penny dropped in a slot. Good for Jacksonville!

But now listen: In the city of Tampa, in a brand-new fine union depot, the toilet seats, walls, and floor were spattered with tobacco quids and juice; varnished wood-work split and broken; dust and filth sticking to corners, etc., although just one year ago the room was in beautiful trim. However, there *was* one beautiful closed closet to be opened only by a "nickel in a slot," and this was protected by notices similar to those in Jacksonville.

It occurs to me that something might be said right here in regard to the demoraliz-

ing tendency of the tobacco habit; but some visitor at the "Home of the Honeybees" might "come back at me" and say, "Why, Mr. Root, the closets in your own factory at Medina, Ohio, are, at least *some of them*, stained with this same tobacco juice." With sadness and sorrow I can only reply that I hope our men employees may read *this*, even if they do not read *all* I write.

How about the closets on our fine Pullman cars that are fitted out with such shining furniture and elaborate expense? Some of them are nicely cared for, but many are not. I think, however, improvement is plainly visible every trip we take.

BROOKSVILLE, FLA., SUB-EXPERIMENT STATION

We did not take in the above on our trip here as planned, because we passed the branch railroad at St. Catherine in the night; but I started to make the visit on Friday, the 14th, taking the daily steamer to Tampa, where I was obliged to pass the night. I saw by a Tampa daily two things that interested me. First was a moving-picture show of figures that *talked* as well as moved. As a rule I seldom attend these shows, and never go to theaters, but I felt it right and proper to see what has been called Edison's latest and greatest achievement. The first act on the program was a splendid lecture by a talented orator and a most vivacious speaker. It was *not* an illusion. The man himself stood before you, and you could see every motion of his face and mouth, and his words were so clear I caught every syllable easily. In his talk he said if this^{*} invention had been known we might now have the pleasure of seeing Washington face to face, and hearing the father of our nation exhort his soldiers. To illustrate his talk he picked a dish from the table and mashed it on the floor. We saw the pieces fly, and heard the crash, saw an attendant gather up the fragments, and one had to pinch himself, almost, to realize that *no* dinner-plate had been dashed on the floor at all. A girl started out with a tin pail for water. We heard the pail rattle against the bushes, saw the water, and heard it splash as she filled her pail from the "old oaken bucket." Then a group of singers danced and sang, and every voice of the dozen singers was distinctly audible. Just as my conscience began sounding faintly, that "alarm bell" I have told you about, a waiter brought in a tray of beer-glasses with foam rolling off the brimming mugs; and when the singers stopped, they clinked their glasses before drinking. I got up (even though I was then on a front seat),

and went out. Why should this great and precious invention, this gift of God, be prostituted (when it opens up such possibilities) to illustrate a drunken revelry? I suppose it is because the multitudes demand such things; and I felt pained as I failed to notice that *any* one else in that audience of several hundred felt as I did, that it was time to go home.

Let me say a word here in commendation of the good people of Tampa. Whenever I was in doubt about finding my way I met most courteous responses, and different people went out of their way to put me on the right car, or to help me to a place difficult to find, in spite of my protest. This is a pretty good world, after all. If I am right, the saloons in Tampa have all been obliged to remove all screens from before doors and windows. Of course there was grumbling and protest; but Tampa police obey orders from their chief.

Let me digress a little before I mention the second thing that took my eye in the city daily. A few years ago I talked with Crenshaw Bros., seedsmen, about handling bee-supplies; but as they were then also in the commission business they said they could not well take on any more responsibility. Well, of late the brothers have divided up, in some way, and the truck, fruit, etc., are handled as a separate line in a different part of the city. Well, I saw in the paper that this latter firm had just received a shipment of *ten thousand* chickens from Tennessee. I was up before it was fairly daylight; and the crowing of the roosters greeted me to their great establishment. A great covered platform, which I suppose might be called a warehouse, was full of workmen, even at that early hour; and, besides the chickens, almost every line of goods that grows in the South was being crated and shipped to customers. Don't tell me any more that Florida people are "lazy." One of the boys told me about half of the 10,000 chickens had been sold and sent away. They were placed in pens of perhaps 300 or 400 each, and in each inclosure there seemed to be almost every breed represented more or less. The boys said they were sold in lots at 65 cts. each; but where a purchaser wanted to *take his pick* the price was more, for in the lot there were "Reds" and "Rocks" that would weigh much more than 65 cts. I wonder what the "chicken-raisers" in Tennessee get for their fowls.

The fifty or sixty miles to Brooksville is almost an unbroken wilderness except for the turpentine camps; and as we near the town we come into the Florida hills. In fact, I did not know before there were such

hills and valleys in the whole State. To get home this Saturday night I found I should have to get an automobile to catch the Seaboard train at Dade City, about 25 miles, over a sandy road. As the experiment station was out about four miles toward Dade City we figured to start about as soon as I could get my dinner; and to get as much time as possible at the government station, I (at least for once) ate hurriedly. On the bill of fare at the hotel my eye caught "baked yams," which I ordered with roast beef, etc. When the yams came I thought at first they had by mistake sent a big round and smooth beet. It was baked so the outside was slightly charred; but on mashing I found it yellow and dry, and tempting to look at. I shook out the floury inside on the platter of roast-beef gravy, and took a taste. Why, it was worth the long trip to Brooksville, almost, to get that dinner of *baked yams*. I have written for some cuttings, and will report later. After my 20-cent nice dinner I found a two-seated Ford at the door, owned by a man who had run it only six weeks. He said his wife would like to go along if I, who hired the rig, did not "object." Did anybody *ever* hear that A. I. Root objected to a woman being in the crowd?

Prof. Gomme, of the government station, is a big stalwart Texan, and I soon found he was "big" in many ways. As I could spare only about an hour we talked fast. Pretty soon a bright little woman came out on the porch and said she wanted to be introduced to Mr. Root, for she just overheard something he said about "chickens." Chickens indeed! I wonder if it is true that I do *sometimes* "talk about chickens." We went out and got the other woman into the auto; and didn't we talk chickens and almost every thing else? Mrs. Gomme has ducks and chickens, both, and is just getting the fever for "weeding out the drones" with trap nests, etc.

Uncle Samuel has searched Florida for the best soil for dasheens and a lot of other stuff, and decided on this spot where oak trees grow as large around and as tall as almost anywhere up north; and this little woman with one child is almost alone in the wilderness. As nearly as I could learn, there are no white women living much nearer than Brooksville. No wonder she could "talk" when she found somebody besides the ducks and chickens.

On p. 738, Oct. 15, I gave a report of this government station, and suggested that "millet 18 feet high" might be a misprint. There was no misprint. This wonderful plant is not only standing thicker than

closely planted corn, but it is excellent for horses and cattle, and for filling silos. Listen:

"Mr. Gomme, you must have used a tremendous lot of fertilizer or stable manure, or both, to get this enormous crop."

"Not a bit of *either*, Mr. Root. Newly cleared Florida soil did it all."

What do the good friends who say "nothing will grow in Florida" have to say to the above?

I saw papaya trees with more than a wheelbarrow full of great "melons" on a tree; and so many things from all over the earth being tested I can not remember a tenth part of them. The dasheens were just plowed up, and lying on the ground—about 2000 bushels. All the small ones are to be given to applicants. I think 1000 or more requests are now waiting their turn, when the tubers are dry enough to mail. Mr. Gomme advised planting about Feb. 15 here in Florida; but my impression is they can be planted any time below the frost-line. My neighbor, Mr. Ault, this morning dug two hills (see picture p. 784) that went 17½ and 17¾ lbs. respectively. Mr. Gomme plows under the great fleshy stalks to enrich the ground; but we found them even more luscious for a stew, as I have described,

than the baked tubers. The latter should be dug and dried out in the sun for a couple of weeks before trying to bake them. No other vegetable is so easy to prepare for the table. Just brush the tubers well with a good stiff brush, and they are ready to go into the oven.

Notwithstanding the sandy hills and roads that crooked between the trees at almost every rod, we made Dade City 45 minutes before train time. In some places it seemed as if almost every tree close to the road had been barked by automobile hubs. The 25-mile trip cost me \$7.00. Let me resume the subject I started out with, by one more illustration.

As I purchased my ticket at Dade City I asked to be directed to the water-closet. Didn't have any. I asked the freight clerk for the nearest place, and he said, "Court-house two blocks away." At the court-house (a nice new brick), some expensive closets had been installed; but they were bespattered with tobacco, the room was unswept and untidy. Dear brothers and sisters, is this a fair representation of the present stage of civilization? Should not our court-houses be in some sense "temples of the Holy Ghost" as well as temples of law and justice?

Health Notes

HOT-WATER INJECTIONS, ETC.

Our older readers may remember I was once quite enthusiastic about this form of water cure. They may not all recall, however, that later on I dropped it and advised against it. Here is what Terry says in the *Practical Farmer* in regard to the matter:

Injections are all right for emergencies; but for a steady practice drink enough water and eat proper food so nature will attend to the movement of bowels. Is not this natural and sensible? You say a doctor who edits a certain health magazine is constantly advising the internal bath. Yes, and turn over to the advertising pages and you will find that he is interested in the sale of a costly contrivance for introducing water in this unnatural manner. He says there that he can prove that 90 per cent of all your ailments are due to constipation. Very well; and I can prove that plenty of water put in the mouth in a natural way, along with food which has in it the natural coarse parts which the bowels need, will cure and prevent constipation without the use of his instrument at all. I have seen reading-matter praising this instrument in a California paper, and then the advertisement in another place, probably both paid advertisements. Don't be caught in any such easy manner. It is, of course, far better to use this contrivance than to be constipated. But it is better yet to live properly, and have no earthly use for it.

The above is all right, as Terry outlines, for an emergency. When you are in great distress, and can get relief in no other way,

by all means use the hot-water injection; but after that, try to live so that nothing of the kind will be needed—that is, be careful what you eat, and be careful about over-eating. It is now several years since I had occasion to use any thing of the kind.

SEX HYGIENE FOR SMALL CHILDREN.

For some time I have been somewhat worried and anxious about the rush to teach small children sex hygiene. I was invited to be present on one occasion where a distinguished physician gave a talk to school children. His talk was all right, and splendid for boys a dozen years old or so; but I really felt troubled to see some little chaps on the front seat, but little more than half a dozen. Another thing, I had a strong feeling that the mother should be the teacher, and not the teachers in our public schools, nor even a great doctor. The following, which I clip from the *Chicago Advance*, sums up my ideas pretty thoroughly in just a few words:

SEX HYGIENE: A WARNING.

Within the last year there has been a perfect epidemic of sex consciousness, one aspect of which has been a vociferous demand for the teaching of sex hygiene to children.

There is real need of something in this direction, but we wish to utter a reiterated warning. Whatever else there is in this movement, one thing has been evident in many of the discussions, the attempt to secure instruction on sex hygiene in public schools constitutes one more effort of parents to shirk their God-given responsibility. No well-meaning maiden lady giving blushing lessons out of a text-book, no imported lecturer with exaggerated ideas of sex consciousness, can be any proper substitute for fathers and mothers, and these may do great harm. We have no doubt of the good intentions of most of the people who are behind this movement, but we have grave doubts of the practical wisdom of many of them.

Awakening a childish interest and curiosity in things they are not old enough to comprehend properly is the trouble. I think I must have been six or seven years old when I went to my mother (bless her memory) and asked her something in regard to a certain word I found frequently in the Bible. Her reply was something like this:

"My child, will you not take mother's word for it that it is best for you to drop this matter until you are a little older? You are not able to understand it now. Now please trust your mother a little more, and do not go to the boys nor to anybody else about it. Mother knows best, and she will teach you about all these things when you get to be a little older. Will you not trust her?"

I gave her my childish promise, and stuck to it pretty well; and when I happened to overhear the talk of bad boys in regard to this matter, my mother's warning prompted me to keep away from them. I have reason to believe there are quite a number of mothers who will agree with me here. Now, dear mothers, have you taken the same pains with your young boys that my mother wisely took to protect me in my childhood from grave danger?

Temperance

WHISKY FOR SICK FOLKS—SEE P. 743.

The *Union Signal* for Nov. 6 contains a full-page article in regard to this matter, and informs us that a hospital in England has been run for *forty years* without the use of any liquors, and its record is ahead of any similar institution, as we know it would be. Now, there, if your family physician is prescribing intoxicants he is not up to date; and if he refuses to inform himself, get a different doctor. Just consider for a moment a *hospital* in this enlightened nation that, instead of giving its innocent inmates *health*, gives them that which helps on to—"hell."

IF RUM IS BAD FOR THE INDIAN, HOW DOES IT HAPPEN THAT IT IS NOT ALSO BAD FOR THE WHITE MAN?

We clip the following from the *Wheeling Advance*:

GOVERNMENT BARS RUM ON PUEBLO RESERVATION;
SUPREME COURT SETTLES LONG-PENDING FIGHT
RELATIVE TO QUESTION OF LIQUOR FOR INDIAN WARDS OF UNITED STATES; LIQUOR GANG SUFFER A TELLING BLOW.

WASHINGTON, Oct. 23.—The supreme court held to-day that the Pueblo Indians are under the guardianship of the government, and liquor could not be taken into their country without violating the federal law.

The decision marks a long fight to distinguish those Indians who have lived in towns since long before the first white settlement in the United States, from the tribes which have been held to be wards of the government.

The case has been hard fought, and the defeat of the liquor gang is a stunning blow. Advocates of temperance, however, are inquiring why, if the highest court in the land holds liquor bad for the red man, it should not be equally bad for the white man. To be consistent, it is urged that the government

should submit at least the resolution for an amendment to the federal constitution to prohibit the sale and manufacture of the beverages, in order that the several States might express themselves upon it.

A CELLAR FULL OF WINE 25 YEARS OLD, BUT STILL A TEMPERANCE MAN, ETC.

My grandfather, a naturalist, horticulturist, and wine-raiser, taught me to despise tobacco and liquor. Strange to relate, grandfather had the cellar full of wine, some 25 years old; but he hardly ever drank any except as a test. He was from the Rhine River, Hessen Darmstadt, a wine country. Naturally grapes were his work. This goes to show what *will power* is. The hard-cider barrel, seemingly harmless, has started many a drunkard, as our village character admits.

One poor disciple of "John Barleycorn" passed through our yard just as I had a few frames of honey out. He said, "So! that the work of the busy bee? Fine and wonderful. Sure, and they must work to do it; and I would do the same if they'd let me sleep all winter and ate honey bread." I could not give him an answer, as a witty Irishman is past my slow mind. One of his sayings is, "I was conceived in misery, born in poverty, raised in ignorance; so, blame me not. I have enough to eat, and can eat it, so I am rich."

Hillside, Ill., Sept. 11.

GEO. A. WOLFF.

WHO IS TO BLAME?

The *Union Signal* says:

"The first step toward the elimination of sin is to get after the man who makes money out of it," is the terse way *Collier's Weekly* outlines the course of procedure in fighting the traffic in drink and vice.

VOTES OF WOMEN WIN SWEEPING VICTORIES IN ILLINOIS FOR PROHIBITION.

As we go to press, election returns show that 22 Illinois cities and towns were carried by the dries. Thirty-one counties in the State are now entirely dry. Women went to the polls in large numbers, and voted dry in about the ratio of four to one.—*Union Signal*, Nov. 6.

Index to Gleanings in Bee Culture

Volume XLI

In using this index the reader should not fail to note that it is divided into five departments, namely, General, Editorial, A. I. Root's writings, Contributors, and Illustrations. The index of General includes everything except Editorials and A. I. Root's writings.

GENERAL

Absorbing cushion and small entrance, 795; Adulteration, Reddett on, 46; Advertising by moving pictures, 709; Advertising, honesty in, 607; Advertising, league fund for, 400; Advertising, Jay Smith's plan, 447; Advertising, R. CLEANINGS IN BEE CULTURE FOR 1914

The Magazine for the Beginner, Back-lotter, and Specialist Beekeeper

For several years we have been doing our best to make GLEANINGS an indispensable publication for the wide-awake beekeeper whether he has but one colony, a small suburban apiary, or a series of out-apiaries numbering hundreds of colonies in all. We believe we have never received such enthusiastic approval of our efforts as we received in 1913 when hundreds of letters from our friends told of their appreciation. We wish that we might print a number of them here, but we prefer to utilize the rest of the space for outlining our plans for 1914.

For 1914 we shall continue the special numbers, the feature which has so delighted our readers during the last three years. In deciding just what subjects to take up, we have not selected topics at random, for we have been guided by the expressions of the majority.

JANUARY 1—BEES AND POULTRY.

—We think we are safe in saying that no special number that we ever published proved so popular as our February 15th issue for 1912. In getting out another special number devoted to the interests of poultry-raising and beekeeping, we propose to surpass our former efforts and to get together the best material possible on poultry-raising from the beekeepers' standpoint.

FEBRUARY 1—BEES AND FRUIT.—

Our March 15th issue for 1912 has been used far and wide by beekeepers and fruit-growers alike to show the value of bees in large orchards. In the two years that have elapsed, however, so much new material has developed that in order to be entirely up to date it is really necessary to have another special number on the same subject. We have a wealth of material that has never before been given to the public. Extensive fruit-growers who are not especially interested in *honey*-production will tell of the value of bees in orchards.

MARCH 1—BEEKEEPING IN CITIES.—

Probably few beekeepers realize the number of beekeepers there are in every large city. City beekeeping is a most interesting topic, and in addition to stories of beekeeping told by professional men we shall have discussed various problems connected with bees in attics, on roofs, and in back lots. We also have a *true* story of a beekeeper in a city who was fined \$100.00 because his bees were considered a nuisance, and who afterward appealed to a higher court and won out. Good story.

APRIL 1—BREEDING.—

Ever since we first began having special numbers there have been requests on the part of a good many of our readers for a special number on breeding. We are glad that we are able to arrange for it this year, for it is a fact that very little is known in regard to breeding bees. Breeding is one of the most important subjects connected with our pursuit.

We shall publish special articles by noted queen-breeders on qualifications of breeding queens. Queen-rearing both for the small beekeeper and the specialist will be fully discussed.

JUNE 1—MOVING BEES.—We ourselves expect to move three hundred colonies of bees to Florida, get a good honey crop, double the number of colonies, and move them back again in the spring. Details of moving by boat, wagon, auto-truck, and by rail will be fully described and illustrated, and other large beekeepers having experience along this line have also promised articles for this number.

AUGUST 1—CROP AND MARKET REPORTS.—There has never yet been a systematic effort put forth for the compiling and publishing of comprehensive crop and market reports from various parts of the country. In 1914 we are going to make the effort of our lives to get telegraph reports from important fields, such as the clover-belt, Texas, Colorado, Idaho, and California. etc. These will be published right along as soon as we can get them, but in this August 1st issue we shall have a grand summary of the crop reports and conditions of the market in general. No beekeeper should miss this important number.

SEPTEMBER 1—WINTERING.—We have not learned all there is to be learned in regard to wintering. A number of specialists are going to make experiments during the winter of 1913-14, which experiments will be published in this number. We shall also give our own experience summed up as to the feasibility of wintering northern apiaries in the South.

IS NOT ALL THIS WORTH WHILE?

We have now given you our plan for 1914. If you are trying to make the most out of your bees we feel sure you can not afford to miss such a wealth of information as the subscription price, \$1.00, will bring you.

BULLETIN
Issued by the
Hampshire Paper Co.
Makers of

Old Hampshire Bond

How Would You Judge a Man You Have Never Seen?

Suppose you have only a few letters from a man or firm with whom you are contemplating business relations. You know nothing but what the letters tell you, but do you know *everything* a letter can tell?

The kind of stationery a man employs is a powerful index to his character.

For example: Almost without exception the man who selects OLD HAMPSHIRE BOND for his letter paper and office forms does so for reasons that would influence only a reliable man, a man proud of his business, jealous of its reputation, and seeking always a higher standard for all things associated with his business.

OLD HAMPSHIRE BOND is not bought by accident. It is made "a little better than seems necessary," and stationery of this character has little appeal except to men who do their own work more carefully than ordinarily expected. Those who use OLD HAMPSHIRE BOND want the best for themselves,

which might indicate that they would expect you to want no less.

So, too, the printer who likes to use such paper as OLD HAMPSHIRE BOND will be found one who takes pride in doing his work "a little better than seems necessary"—one whom you would do well to trust.

Send for Liberal Sample

So that you may know OLD HAMPSHIRE BOND, we will gladly send you some sample sheets showing examples of modern letter-headings. Better still, enclose 10 cents in stamps and we will mail you a liberal sample box of OLD HAMPSHIRE BOND SEMI-BUSINESS STATIONERY—a form of paper and envelopes which every business man should have both in his office and at home, for there are many letters that should express a feeling impossible to secure from business stationery.

HAMPSHIRE PAPER COMPANY, South Hadley Falls, Massachusetts

The only paper makers in the world making bond paper exclusively

American Steel & Wire Co.'s Thoroughly Galvanized Wire

A New and Decided Advance in the
Manufacture of Wire for
Woven Wire Fences

A Galvanizing of Great Durability, Originally Developed and to be Found Only in the American Steel & Wire Co.'s Fences

THE American Steel & Wire Company is the first to develop a THOROUGHLY GALVANIZED WIRE.

It has a thicker coat, a quality more refined, and a deeply adhesive contact of the zinc and the steel that solidly unites the two metals, highly flexible without injury, and having a finish and weather resistance unequalled—a *thoroughly galvanized* wire.

There are wonderful records of super-extraordinary efficiency, such as an auto tire lasting 30,000 miles; a pair of shoes, suit of clothes or a wagon showing astonishing durability; two ships built exactly alike, one being vastly better; or a certain piece of woven wire fencing apparently indestructible under long years of severe trial.

Years ago, in making and galvanizing

steel wire, we searched out the reason for this spasmodic super-excellence, and found it to be the *chance combination of a high state of perfection*, in the finest detail, of *man, methods, machinery and materials*. We then mastered these fickle elements of chance by the employment of a tremendous manufacturing organization and brought them under control for steady and continuous production.

We now announce the final completion of our facilities for the extensive and permanent production of this thoroughly galvanized wire. We shall use it in the manufacture of our celebrated woven wire fences—the AMERICAN FENCE, the ELLWOOD FENCE, the ROYAL FENCE, the ANTHONY FENCE, and all our other fences.

These fences are adapted for all field, farm and poultry uses, and possess superior structural advantages in quality of steel and fabric. Dealers everywhere throughout the country display these fences and will quote lowest prices.

They cost no more than other fences, and considering the *extra large and heavy wires* used, and the exclusive use of new *thorough galvanizing*, makes them especially attractive as the best and cheapest fences.

"falcon" Foundation

.....Made at Falconer, New York, in the "falcon" Plant.....

From the best wax that can be purchased, run through our special cleansing and sheeting processes, and milled with the greatest care. The bees prefer it, and work on it sooner.

We've just finished making a large stock of pine hives, sections, separators, and many other things which are in daily use by the bee-keeper. "FALCON" supplies have given satisfaction all over the world, and we are confident that they will please you in like manner.

During January we are allowing a 3 per cent discount on all "FALCON" bee-supplies. Don't delay your order, but purchase them now and save the discount. Don't be one of those fellows who wait until the last minute, and lose money. Write us to-day.

Look up your stock and see if you need any supplies. Then send us list for quotation on the "FALCON" Brand from our nearest dealer.

Write for samples of our foundation and Red Catalog postpaid.

Prompt attention. All goods guaranteed. A trial will convince you.

How to Produce

EXTRACTED HONEY

THIS is the title of a neatly printed, illustrated booklet, the second edition of which has just been published. Each operation in the process of extracted-honey production is explained in detail, with photographic reproductions and drawings to make the text more plain. Beginning with the chapter on "Preparing Colonies for the Honey-flow," the booklet concludes with a description of "Pack-ages for Extracted Honey."

Many helpful and valuable suggestions will be found within the 44 pages this booklet contains, and it is a pleasure to announce its addition to our Bee-keepers' 10-cent Library. Order by name or specify Number 25.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, "a bee-man" and a naturalist.

PROTECTION HIVE

The best and lowest-priced double-wall hive on the market. This hive has $\frac{3}{4}$ material in the outer wall, and is not cheaply constructed of $\frac{3}{4}$ material as are some other hives on the market. Packing or dead-air space as you prefer. Remember, winter is approaching. Get your bees into comfortable quarters before it is here.

Send for a catalog.

A. G. WOODMAN CO., GRAND RAPIDS, MICH.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except from the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and en-

tirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, Dec. 18.

BLAKE-LEE CO.

ALBANY.—Honey market is quite bare of any lots of comb honey that are not candied and in good order—such as is of nominal value only. White honey in good condition sells high for both comb and extracted.

Albany, Dec. 16.

H. R. WRIGHT.

INDIANAPOLIS.—Fancy white sells at 18 in ten-case lots; No. 1 white 1 ct. less; amber comb is in slow demand and at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. There is an excessive demand for comb honey, but very little is now being offered by producers. Beeswax is in good demand, and producers are being paid 30 cts.

Indianapolis, Dec. 17.

WALTER S. POUDEE.

NEW YORK.—Comb honey is getting well cleaned up, and prices are very firm on all grades. While some small shipments are coming along as yet, the bulk of the crop has been marketed, and from now on receipts will be next to nothing. We quote fancy white at 16; No. 1 white, 15; No. 2 white, 13 and 14; dark and mixed 12. The market is easy on extracted honey, and prices are gradually declining—especially so on Porto Rican and other West Indian honey. Receipts of new crop have been quite large recently, and will probably continue so for several months to come. The demand is very light, hence the decline in prices. We quote West Indian at 75 cts. per gallon; white clover at $8\frac{1}{2}$ to 9 per pound; California light-amber sage, 9 to $9\frac{1}{2}$; buckwheat, 8.

New York, Dec. 17. HILDRETH & SEGELKEN.

The Best Time to Buy Supplies

The season just past has demonstrated more clearly than ever the necessity for being prepared for a honey-flow **BEFORE** it comes. If you wait until the season is upon you, the chances are that the greater part of the crop will be lost while you are impatiently waiting for supplies to arrive. It may seem a little early now to think of next season's honey harvest; but the fact of the matter is, this is just the time to order goods for next season.

We are beginning now to replenish our stocks. We shall have carload orders coming from the factory very often for the next few weeks. Special orders placed now can have just the attention they need, both here and at the factory, and you may have your goods sent in one of our cars, thereby saving on transportation charges. Regular stock will come straight to you from our warehouse in new unbroken packages, and you can put the goods together in your odd minutes, thereby saving the expense of extra help in the spring.

Our usual discounts for early orders apply again this season—3 per cent for cash orders sent in January, the discount diminishing one per cent per month as the season advances. These discounts mean a considerable saving, and you might as well take advantage of the highest by ordering now. No change of prices has as yet been announced, and you may, therefore, order from your present catalog. If your catalog has been mislaid, write us at once and we will send another.

If your season's crop of honey is not yet disposed of, we can give you a good price and handle it promptly. Send samples of extracted and full information as to containers, flavor, quantity, price, etc. We also handle comb honey.

Honey reports continued from page 2.

DENVER.—We quote comb honey in a jobbing way at the following figures: Strictly fancy white, \$3.15; No. 1, \$3.05; choice, \$2.85; No. 2, \$2.70; extracted honey, white, 9; light amber, 8; strained, 6½ to 7. We pay 26 cts. in cash and 28 in trade for clean yellow beeswax delivered here.
THE COLORADO HONEY-PRODUCERS' ASSOCIATION.
Denver, Dec. 19. F. RAUCHFUSS, Mgr.

SCHENECTADY.—As usual the market has assumed a very quiet condition during the holiday period. A few small shipments of clover comb are still arriving, but no buckwheat. We do not change quotations from our last report, but market is less firm. There is a continued demand for buckwheat extracted, but none to be had here; light in moderate demand.
Schenectady, Dec. 18. CHARLES MACCULLOCH.

CINCINNATI.—The demand for comb and extracted honey is light, with a good supply. No. 1 white comb honey sells in large lots at \$3.60 per case of 24 sections. There is no demand for off grades. White extracted honey in 60-lb. cans is selling from 9½ to 10 cents; light amber in barrels, 7 to 7½; in 60-lb. cans, 8 to 8½. Beeswax, fair demand, sells at \$33.00 per hundred. The above are our selling prices, not what we are paying.
Cincinnati, Dec. 21. C. H. W. WEBER & CO.

ZANESVILLE.—The demand for honey is not quite so brisk, which is not strange in view of the proximity of the holidays. Stocks are about sufficient to take care of present needs. Best white comb goes to the retail grocery trade at 18 to 19. In a jobbing way prices would be a cent or two lower. Best white extracted in 60-pound cans is quoted at 10 cts. Producers receive for beeswax 30 cts. in trade, 28 in cash.
Zanesville, Dec. 17. E. W. PEIRCE.

ST. LOUIS.—We quote fancy white comb honey at 16 to 17; No. 2, 15; light amber, 12 to 14; dark, 9 to 11. As most of the honey is sold by the case, we quote fancy white California at \$3.50 to \$3.75; No. 2, \$3.25; light amber, \$3.00 to \$3.25; dark, \$2.40 to \$2.50 per case. There is not much demand for extracted honey, and it is quotable as follows: Light-amber southern, in barrels and half-barrels, 7; dark, 6 to 6½; same grade of honey in five-gallon tin cans, ½ cent higher. White-clover and California white, 9 to 9½; light amber, 8½. Beeswax is in good demand at 30 cents for prime. Inferior and impure sells for less.
St. Louis, Dec. 20. R. HARTMANN PRODUCE CO.

CHICAGO.—Honey sold well during the first half of December; but stocks are still heavy, and prices are being made at less than quotations herein given by people who do not make a specialty of honey; hence it is difficult to give the exact figures. We quote No. 1 white comb honey from 15 to 16, with the fancy bringing 17. No. 2 white, 10 to 14; No. 1 to fancy amber, 13 to 15. Dark grades of comb, and lots out of condition, sell at from 8 to 10. Extracted honey, in new cans and cases, white clover and linden, brings 9 to 10; other grades of white honey about 8, with amber grades ranging from 7 to 8. Beeswax is steady at from 30 to 32, according to color and cleanliness.
Chicago, Dec. 18. R. A. BURNETT CO.

ASSETS OVER ONE MILLION DOLLARS.

A. T. SPITZER, Pres.
E. R. ROOT, Vice-pres.
E. B. SPITZER, Cashier.

THE BANK THAT PAYS 4 PER CENT

KANSAS CITY.—The supply of honey is equal to the demand. The demand is fair for both extracted and comb. We quote No. 1 white comb, 24-sec. cases, \$3.15 to \$3.25; No. 2 white comb, 24-sec. cases, \$3.00; No. 1 amber comb, 24-sec. cases, \$3.00; No. 2 amber comb, 24-sec. cases, \$2.50 to \$2.75; Extracted white, per pound, 8 to 8½; extracted amber, 7 to 8; beeswax, 25 to 28.
Kansas City, Dec. 18. C. C. CLEMONS PRODUCE CO.

CINCINNATI.—There is a big supply of both comb and extracted honey, and the sales are slower than they have been for some time back. This is quite natural, for Christmas candies and nuts have the attention of the buying public at this time of the year. We are selling fancy comb honey at \$3.75 to \$4.00 a case; and our best grades of extracted honey in 60-lb. cans at from 8½ to 10 cts. per lb.; amber extracted honey in barrels at 6½ to 8, according to the quantity and quality purchased. For choice bright yellow beeswax we are paying 28 delivered here.
Cincinnati, Dec. 17. THE FRED W. MUTH CO.

LIVERPOOL.—Thirty-seven barrels of Chilean honey sold, various piles, at the all-round price of \$6.24; 15 barrels, pile 1, sold at \$7.68, and 25 barrels, pile 10, at \$8.16. Nothing of importance in Californian or Jamaican. Quotations are unchanged at \$10.20 and \$6.84 to \$7.80 respectively. Market is steady. Quotations are as follows: Haitien, \$6.48 to \$7.92; Peruvian, \$5.76; Chilean, \$6.24 to \$8.16. During the past week a few bags of medium to good quality Chilean beeswax have been sold at \$37.62 to \$38.88; African, \$34.26 to \$34.62.
Liverpool, Dec. 14. TAYLOR & CO.

SOME THINGS TO OBSERVE IN EXTENSIVE BEEKEEPING.

Advocates Steam-heated Uncapping-knives, Portable Extracting-outfits; a Six or Eight Frame Extractor; Sells 2000 to 50,000 Pounds of Honey Each Year Mostly to Consumers. Heats Honey as soon as Extracted.

By Virgil Sires, North Yakima, Wash.

These are just three of the articles that will appear soon in the *Beekeepers' Review*. There were 74 of them during 1912. We had 64 contributors. They were not articles written out for pay, either, but those sent in on the spur of the moment, when all the faculties were tingling, and that kind is always the best. Possibly their fingers were daubed with propolis when they wrote some of them. But they had an idea they wanted to give you that had helped them. It came just as they would have told you had you been where they could talk to you. And that is just the kind of contributors we will have for 1913. Their articles will ring with practicality; and the best articles often come from the most unexpected places.

Send in your \$1.50 now, and get full membership in the National, full membership in a branch, and the *Review* each month for a year.

Write

The National Beekeepers' Assn.
214 Hammond Bldg., Detroit, Mich.

A Beginners' Department to start in the January number

"If Goods are Wanted Quick, Send to Pouder."

Many of my friends are calling my attention to the luxuriant sod of white clover which now covers our central States; and this feature, with the fact that bees went into winter quarters strong and with an abundance of wholesome stores, would indicate that this is going to be a piping good season for the wideawake bee-keeper. With these conditions in view I have, as usual, prepared myself with a very complete stock of the finest and latest equipments for those who are interested in the bee industry. Hives in all their different patterns and combinations; the Buckeye double-walled hive, Danzenbaker hives, regular dovetailed hives, and all equipped with supers of any design that may best suit your requirements. Sections, comb foundation, smokers, veils, and honey and wax extractors—everything required in the apiary; and the goods are here, so that you get prompt returns after placing your order here. To those who have not dealt here during the past twenty-four years I wish to explain that the goods handled are manufactured by The A. I. Root Co., and the kind that are in use by the most progressive everywhere, and my prices are the factory schedule, whether you require one hive or one hundred. If you've planned to place your order elsewhere I'd be grateful if you would submit a list of goods wanted for an estimate, and this would place you under no obligations whatever.

Many of the articles described in my catalog can be delivered by parcels post, and I am devoting special care to this line of business.

If you are in need of more finest honey for local demands I can supply you. Ask for my monthly quotations of the Indianapolis honey market.

I can use more beeswax on a cash or trade basis.

I should like to place my catalog in your hands.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

Holiday Greeting!

I take this opportunity to thank my customers and friends for the patronage, help, and encouragement given me during the last and former seasons. It has been my aim to have you all feel that I have sought, not your money alone, but your good will and friendship as well. My relations with you have been most pleasant, and it is a satisfaction to know that possibly I have rendered you some service. If in the future I can help you in any way, I shall count it a privilege to have your calls.

While any forecast of weather or crop conditions necessarily involves elements of uncertainty, the outlook for a good honey-flow in the North Central States the coming season could hardly be better. An order placed now will insure having the supplies on hand when needed, and will avoid the possibilities of vexatious delays when the rush is on. The December discount of 4 per cent is also a consideration.

May the Yuletide bring you much of joy, and the New Year hold in store for you blessings manifold.

E. W. Peirce, Zanesville, O.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the
American Bee Journal, one year, Both for Only **\$1.00**

"First Lessons in Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the
American Bee Journal, one year, Both for Only **\$1.00**

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL. . . HAMILTON, ILLINOIS

DURUY'S New and Up-to-Date History of the World

In four splendid volumes richly bound in cloth and lavishly illustrated with valuable portraits, sketches, maps and diagrams

Revised to the minute—including this Summer's Presidential nominations

FREE

with a year's subscription for the

Review of Reviews

The announcement of a new and revised edition of Duruy's famous History of the World will be hailed as a great publishing event. For 50 years this fascinating history has held the highest place among the countries of Europe. Over 2,000,000 copies have been sold in France alone. It has been translated into all tongues, and has enjoyed international confidence because of its broad, fair, and interesting presentation of world events. In condensed form it is the text book on world history in many of our leading universities. And now it bids fair to establish even a new record for popularity and big sales.

More Absorbing than Fiction

Every volume tingles with full-blooded life, as the fascinating story of the undying heroes, the famous men, and beautiful women of Greece, Sparta, feudal France, dark Italy, and modern times is unfolded. As in a dream you are guiled through the wars of Caesar, the Crusades, Napoleon, Lee and Grant. From the first to last it is more captivating, more engrossing than the liveliest fiction.

Yet none of its accuracy has been sacrificed. Clear, concise, well arranged, this history gives you an appreciation of past ages, and an understanding of present-day problems of life that you cannot get from any other source. There is no history of equal comprehensiveness which is at once so up-to-date, so authoritative, and so attractively written.

Never in the history of publishing has there been an offer like this in its appeal to intelligent thinking men and women, for if you act at once not only do you get a full year's subscription for the Review of Reviews, "the necessary magazine," but absolutely FREE this famous history that has been endorsed by college professors, professional men, statesmen, scientists, historians—and hundreds of other students and scholars. All that we ask is that you pay 25c for the cost of packing the set of books.

This great combination offer for the special low price of } **\$3.25**

The REVIEW OF REVIEWS

Conducted by ALBERT SHAW

Will in a broad minded, rational way tell of the big and essential things that happen in the year's program. Lucid editorials, subtle cartoons, and authoritative special articles will make it the necessary magazine for a constructive interpretation of present problems and events. As a compendium of current history, art and letters, the Review of Reviews is "a liberal education."

ILLINOIS BEEKEEPERS

IMPORTANT ANNOUNCEMENT

Chicago Distributing House Discontinued for **Lewis Beeware** and **Dadant's Foundation**

The Arnd Honey & Bee Supply Company having gone out of business, Lewis Beeware and Dadant's Foundation will no longer be distributed from Chicago.

Note the New Arrangement

Northern Illinois Beekeepers in These Counties

Boone	Lupage	Kane	Lee	Stephenson
Carroll	Ford	Kankakee	Livingston	Vermilion
Champaign	Grundy	Kendall	McHenry	Whiteside
Cook	Iroquois	Lake	McLean	Will
DeKalb	Jo Daviess	La Salle	Ogle	Winnebago

Send All Inquiries and Orders to

G. B. LEWIS COMPANY

Home Office and Factory, Watertown, Wis.

By dealing direct with the G. B. Lewis Company, the beekeepers in the above counties get the benefit of the service afforded by their immense factory and warehouses. Watertown, being located near the Illinois State line, and having two trunkline railroads and two express companies running direct into Illinois, the G. B. Lewis Company can reach you as easily and quickly from Watertown, Wisconsin, as from Chicago.

Special Inducement

G. B. Lewis Company will guarantee that the freight charges to your station from the factory at Watertown, Wisconsin, will be no more than from Chicago. They will prepay the difference, if there be any, right on your shipping bill.

Beekeepers in Remaining Counties in Illinois

Send All Your Inquiries and Orders to

Dadant & Sons, Hamilton, Illinois

The above firm carries constantly on hand an immense stock of Lewis Beeware, and are manufacturers of Dadant's Foundation. By dealing with them direct you will receive as good or better service than from Chicago.

NOTICE.—If you are not on the mailing list of the G. B. LEWIS COMPANY, send your name in at once. Their Annual Catalog will be issued about January 1st, which will tell you whether to send your order to Watertown, Wis., or Hamilton, Ills.

FACTS!

Hard facts are all the worth of a farm engine are what you want to know before you do any buying. That's what I give you in my big engine book.

My big book tells you all you need to know about farm engines, what you should pay for one, how to tell real quality. Tells how I sell my 1913 engines.

\$50 to \$300 Saving in Price

besides giving you 5-year guarantee, 90-day free trial—and lowest price quoted on efficient, durable engine—any size. Get book and 1913 offer now.

Made with triple case—California Redwood, asbestos, metal cover all over. Copper tank, automatic regulator.

Miller-Sun Hinge burner and all other parts the best that money can buy.

Regulator that is self-acting.

Greider's Fine Catalogue

and calendar of pure-bred poultry for 1913, large, many pages of poultry facts. 70 varieties illustrated and described. Incubators and brooders, low price of stock and eggs for hatching. A perfect guide to all poultry raisers. Send 10 cents today.

B. H. GREIDER, Box 65, Rheems, Pa.

MAKE YOUR HENS LAY

You can double your egg yield by feeding fresh-cut, raw bone. It contains over 100 times as much egg-making material as grain, and takes the place of bugs and worms in fowls' diet. That's why it gives more eggs—greater fertility, stronger chicks, larger fowls.

MANN'S Latest-model BONE-CUTTER

cuts easily and rapidly all large and small bones with adhering meat and gristle. Automatically adapts to your strength. Never clogs. Sent on 10 Days' Free Trial. No money down. Send for our free books to-day.

F. W. MANN CO., Box 37, MILFORD, MASS.

Free Book Tells How

The World's Most Remarkable Incubator— Uses Only 1 Gallon of Oil to a Hatch—Lamp is Filled Only Once

We place the lamp underneath, in the center. That means perfect distribution of heat throughout the egg-chamber—there is no cold side. Our lamp holds 4 to 8 quarts of oil. Fill it once for a hatch—no daily muss or smell. And our automatic trip cuts the flame down at the burner, when egg-chamber gets too hot. All others let the excess heat escape. That's why the X-Ray needs only one gallon of oil to a hatch, while others require 3 to 5 gallons. And an

X-RAY INCUBATOR

has no front door—it opens from the top. That's why it's so easy to ventilate and turn eggs in the X-Ray. The top has two double glass panels so you can see thermometer at any time without exposing eggs to outside air.

The Only Improved Incubator—Saves 75c to \$1.25 On Every Hatch!

Think of this big saving—both of work, worry and money.

Yet there are many other exclusive and patented features of the X-Ray that you should know about. Our new 1913 book No. 100, tells all about these things.

Write Today For Big, Free Book

—and learn more reasons why the X-Ray is the most successful one ever invented. Shipments guaranteed same day orders are received. We pay the freight.

X-RAY INCUBATOR CO., Wayne, Neb.

PAINT WITHOUT OIL

**Remarkable Discovery that
Cuts Down the Cost of Paint
Seventy-five Per Cent.**

**A Free Trial Package is Mailed to Every
One Who Writes.**

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

NO MORE RABBITS

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

Convention Notices

The Washington State Beekeepers' Association will hold its annual convention January 8 and 9, 1913. We expect to have the best convention that has ever been held here. We have invited Mr. G. W. York to be with us if possible.

North Yakima, Wash. J. B. RAMAGE, Sec.

We have decided to hold our annual beekeepers' meeting January 7, 1913, in the Courthouse, Canandaigua, N. Y. A program is being prepared for the occasion. We hope some of the Seneca Co. Beekeepers' Society will meet with us.

Naples, N. Y. F. GREINER.

THE INDIANA BRANCH MEETING, TO BE HELD IN THE PALM ROOM, CLAYPOOL HOTEL, INDIANAPOLIS, JAN. 24.

The foul-brood conditions in Indiana—what has been accomplished, and what we expect to accomplish in eradicating it or checking it in Indiana.—C. H. Baldwin, State Entomologist, assisted by B. F. Kindig, of Elkhart, and others.

The outlook for Indiana honey production, and developing honey resources.—D. W. Erbaugh, Ernest R. Root, and others.

Marketing Indiana honey.—Extracted, John Bull, Valparaiso; Comb, Geo. W. Williams, Mrs. Proper, and others.

Co-operation and Organization, E. B. Tyrrell, Detroit, Sec. National Association.

We have invited Geo. DeMuth, Dr. Phillips, C. P. Dadant, and fully expect some of them to attend. We are expecting a live meeting. We are making a special effort to develop more fully Indiana honey resources. We are realizing that Indiana buys carload after carload of honey every year that is really inferior to our own product.

We want every Indiana beekeeper who can do so to confer with us and remedy this condition as far as possible. When we can have the honey for the gathering, and a market at our doors, there is no excuse for importing any honey at all. Let's get together and furnish it ourselves.

MASON J. NIBLACK, Pres.
GEO. W. WILLIAMS, Sec., Redkey, Ind.

PROGRAM OF NATIONAL BEEKEEPERS' ASSOCIATION MEETING TO BE HELD AT CINCINNATI, FEBRUARY 12 AND 13.

At 10 A. M., the 12th, the meeting will be called to order and the proper committees appointed, including the committee on credentials. Meeting will then adjourn to enable the delegates to file their credentials with this committee.

At 1 P. M. the meeting will again be called to order, when the regular business will be taken up by the delegates. This meeting will be open to all members, but the voting can be done only by the regularly elected delegates.

At 7 P. M. the meeting will be called for a general program, in which all visitors will take part.

At 8 A. M., the 13th, the delegates will again take up the business matters; and should they be

able to conclude their business before noon, the rest of the time will be taken up with a general program.

At 1 P. M. there will begin another general meeting of all present.

Headquarters arranged for us by the Cincinnati Chamber of Commerce, and list of hotels and their rates will be given in full in the February bee journals.

E. B. TYRRELL, Sec.

FOURTH ANNUAL CONVENTION OF THE OHIO STATE BEEKEEPERS' ASSOCIATION, TUESDAY AND WEDNESDAY, JANUARY 14, 15, 1913, TOWNSEND HALL, OHIO STATE UNIVERSITY, COLUMBUS, OHIO.

Report of Secretary; Report of Treasurer; President's Address.

Report of Chief Inspector of Apiaries.

Result of Apiary Inspection in Hamilton County, Fred W. Muth.

My Experience with European Foul Brood, B. J. Holden.

Queen Rearing, J. C. Mosgrove.

Wax Rendering, H. H. Root.

Production of Comb Honey, A. A. Doenges.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

HOTBED SASH.

The time is at hand when many are preparing for winter or early spring vegetables. If you are interested we would be pleased to send you a copy of our booklet, "How to Make and Run a Hotbed."

We are also prepared to furnish hotbed sash made of cypress, the everlasting wood, either K. D. or put together without or with the glass at the following prices:

One sash in flat, no glass. \$.90
Five sash in flat, no glass. 4.25
Ten sash in flat, no glass. 8.00
Put together, 10 cts. each extra; painted, 10 cts. each for each coat of paint. Glazed with 8x10 glass, \$1.10 each extra. This makes the price in lots of ten, put up, glazed and painted two coats of paint, \$2.20 each; or without the paint, at \$2.00. As regularly furnished, the sash are grooved for glass to be butted; but we also furnish at the same price, when specified, rabbeted sash to allow glass to be lapped and puttied in.

1913 EDITION OF OUR CATALOG.

We shall be somewhat later than usual with the new edition of our catalog, as we have been delayed in its preparation. It will not be completed ready for mailing much before the first of February. There are not many changes to record.

A new Peterson capping-melter will take the place of the Root melter which we have listed several years.

The price of extractors will be somewhat advanced because of increased expense involved in some new features. While the comb-pockets as we have made them for a number of years have in most cases proved of sufficient strength, some have complained

that they give way with hard usage. We have devised an entirely new pocket, only slightly heavier, but much stronger, from which the wire cloth may be removed for cleaning. The cage is made of sheet steel stampings locked together with ends of bars clinched over, and wire braces vertical and cornerwise. Then all is coated with tin, securely soldering all joints, and making a smooth surface for cleaning, and to prevent clogging with honey.

The price of the two-frame Cowan extractor is advanced 50 cts. each. The four-frame are marked up \$2.00 each, and the six and eight frame machines \$3.00 each.

BEESEX IN BAGS.

According to a recent ruling, beeswax shipped in bags, even though they are good strong ones or double, must pay fifty per cent more freight than if shipped in boxes or barrels. This applies on shipments from the far West. We have not learned yet how wide a section of country is affected by this ruling. It is, however, the direct result of so many careless shippers using bags for shipping wax which were too light or otherwise unfit for the purpose. As a consequence of wax lost in transit the railroads have had to pay in claims for such losses, and are now undertaking to avoid them by raising the rate. If shippers are not more careful in making sure that boxes and barrels are securely nailed or hooped, there is likely to be a further advance in rate on other styles of packages. Good strong bags are much more secure for shipping wax than boxes, as well as lighter; and if only such had been used this discrimination against them could not have come about. It is a great pity that careful shippers must suffer this discrimination because of the careless or thoughtless work of those who have used bags of inadequate strength.

PARCELS POST.

With the date of this issue is inaugurated the new parcels-post arrangement enacted last summer in Washington. The regulations provide that each parcel must bear the name and address of the sender as well as the address to which it is sent. The postage must be paid by special parcel-post stamps affixed. If ordinary stamps are used, the parcel will be held as though not prepaid. Printed matter, now provided under third-class mail, is not admitted to the parcels-post privilege. The size of the parcel is limited to six feet combined girth and length, and the weight in each parcel must not exceed eleven pounds. The rates of postage to be paid depend on the distance to which the parcel is sent. For delivery through the local or city postoffice: 1st lb., 5c; each extra lb., 1c; 11 lbs., 15c.

	1st lb.	Each extra lb.	11 lbs.
Within first 50-mile zone	.5	.3	.35
Within second 150-mile zone	.6	.4	.46
Within third 300-mile zone	.7	.5	.57
Within fourth 600-mile zone	.8	.6	.68
Within fifth 1000-mile zone	.9	.7	.79
Within sixth 1400-mile zone	1.0	.9	1.00
Within seventh 1800-mile zone	1.1	1.0	1.11
Within eighth zone	1.2	1.2	1.32

For the longest distances this is a reduction from the old rate of 16 cts. a pound to 12 cts., and an increase of the limit of the weight from 4 to 11 pounds. For parcels weighing $\frac{1}{4}$ lb. or less the rate is 1 ct. per ounce; over $\frac{1}{4}$ lb., and fractions of a pound, go as one pound. Up to now it has made no difference where goods were ordered from if sent by mail, as the rate was uniform. Hereafter, the shorter the distance the less the cost within certain limits. Fuller particulars in our new catalog.

SECOND-HAND FOUNDATION MILLS.

We have to offer the following list of foundation machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, 2 $\frac{1}{4}$ x10-inch heavy hexagonal brood mill, An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0139, 2 $\frac{1}{2}$ x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, 2 $\frac{1}{2}$ x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

- No. 0142, 2½ x 6 hexagonal thin-super mill in fair shape. Price \$10.00.
- No. 0151, 2½ x 6 hexagonal cell extra thin-super mill, one bad cell, otherwise in good condition. Price \$12.00.
- No. 0152, 2½ x 6 hexagonal thin-super mill, extra good for regular-width super foundation. Price \$12.00.
- No. 0153, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.
- No. 0154, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.
- No. 0156, 2½ x 6 extra-thin-super mill, fair. Price \$10.00.
- No. 0157, 2½ x 6 thin-super mill, in good condition. Price \$12.00.
- No. 0160, 2½ x 6 hexagonal thin-super mill, in good condition. Price \$12.00.
- No. 0164, 2½ x 6 hexagonal thin-super mill in fair condition. Price \$10.00.
- No. 0165, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.
- No. 0166, 2½ x 6 hexagonal thin-super mill in extra good condition. Price \$14.00.
- No. 0167, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.
- No. 0176, 2½ x 6 extra-thin-super mill in fair condition. Price \$12.00.
- No. 0180, 2½ x 6 hexagonal thin-super mill, in fair condition. Price \$10.00.
- No. 0182, 2½ x 6 hexagonal thin-super mill, very good condition. Price \$20.00.
- No. 0183, 2½ x 6 hexagonal thin-super mill, very good condition. Price \$14.00.
- No. 0187, 2 x 10 round-cell medium-brood mill, old-style frame, in good condition. Price \$14.00.
- No. 0191, 2 x 10 round-cell Pelham mill in good condition for this kind of mill. The bases of the cells are not natural shape, but the walls are regular. Price \$7.00. Sample mailed free if interested.
- No. 0192, 2½ x 10 hexagonal medium-brood mill; extra good condition, nearly new. Price \$20.00.
- No. 0193, 2½ x 10 hexagonal medium-brood mill; very good condition. Price \$18.00.
- No. 0194, 2½ x 10 hexagonal medium-brood mill in good condition. Price \$18.00.
- No. 0195, 2½ x 10 hexagonal medium-brood mill in good condition. Price \$18.00.
- No. 0196, 2½ x 10 hexagonal medium-brood mill in very good condition; nearly new. Price \$20.00.
- No. 0197, 2½ x 10 hexagonal medium-brood mill in very good condition. Price \$20.00.
- No. 0198, 2½ x 10 hexagonal medium-brood mill in very good condition. Price \$20.00.
- No. 0199, 2½ x 10 hexagonal medium-brood mill in very good condition. Price \$20.00.
- No. 0200, 2½ x 10 hexagonal medium-brood mill in good condition. Price \$18.00.

SPECIAL NOTICES

A. I. ROOT

We are glad to see the Planet tools for gardening advertised in our columns for the coming year. Almost as far back as I can remember, the makers have kept up to date with the best and most labor-saving tools, not only for the home gardener, but for the market gardener and farmer as well.

THAT "ADDRESSED POSTAL CARD."

I fear the good friends are forgetting what I have repeatedly said about an *addressed* postal card, where an answer is expected or asked for; I don't want stamps or stamped envelopes. I don't want to be obliged to do any thing more than just to answer as well as I can without any of the customary preliminaries. Some of you have sent me questions about Florida to be answered by "yes" or "no." Very few questions can be answered in this way safely. While there are so many conflicting differences of opinion in regard to Florida, I earnestly advise making a short trip here to see for yourself before selling out to come down here, especially with a family. Some of you seem to think I am just "loafing around" down here. Bless you, I never was busier (and happier) in my life. Now send on your letters, as many as you like, but don't forget the *addressed* postal if you want an answer.—A. I. R.

PUBLICATIONS ON
BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet, giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 328 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

Smith Bros. Seed Co., Box 92, Auburn, N. Y.

APPLE GROWING

The healthier the tree, the better the fruit. The longer trees are sprayed with "SCALECIDE" the more beautiful, healthy and fruitful they become. "SCALECIDE" is the acknowledged leader of all soluble oils—the only one containing distinct fungicidal properties. "SCALECIDE" will positively kill all soft-bodied sucking insects without injury to the tree. Let us prove these statements. Send today for free booklet "SCALECIDE—the Tree Saver." Address B. G. PRATT CO., Mfg. Chemists, 50 Church St., N. Y. City.

Dept. 6.

A Really Practical Car!

A Cartercar will answer every possible requirement you could make of a motor car. It is adapted for all kinds of driving—in all kinds of weather.

The control is by one lever—you have an unlimited number of speeds—and the Friction Transmission has eliminated all the usual troubles. Motor is cranked and lamps operated by electricity.

Your Cartercar will easily climb a 50 per cent grade—and will easily run through sand and mud which are impossible for any gear car. Then, too, this gearless transmission prevents all jerks and jars, which means the utmost comfort, and about twice the milage from your tires. The Cartercar is simple, reliable and efficient—and these features you certainly want in your car. Write for catalog.

Factory Prices for the Asking— on Genuine Witte Engines

**FREE
Engine
Book**

THE genuine Witte—conceded the best farm engine in America—now offered at actual wholesale prices. Yes, this is the engine that has lead the gasoline engine field for 23 years. Dealers have been getting the highest prices for the Witte. Now you can get one at actual factory price—what the dealer paid—and have the finest engine in your county.

Our Gas Well Saves You Many Dollars More

We do more than give you ordinary factory prices. We are the *only* manufacturers who have our own gas well. Power, testing, forge, foundry and heating fuels cost us nothing. You get the benefits. But you couldn't afford to own any other engine even if the Witte cost twice as much—because an average of 1 cent for every horse-power per hour cuts gasoline bills in half—rays for your engine in no time.

Every part guaranteed 5 years—full rated horse power on minimum gasoline guaranteed too. Built in all sizes from 1½ to 40 h. p., every one tested to 10% over load.

WRITE FOR 60 DAYS FREE TRIAL OFFER

and complete, direct, factory price proposition with catalog and special offer bulletin. We expose engine secrets in this bulletin that will startle you. Remember, it's your first chance at an engine of quality, standing and reputation at a small price. Mention size needed or work to be done. Write at once.

How to Produce

EXTRACTED HONEY

THIS is the title of a neatly printed, illustrated booklet, the second edition of which has just been published. Each operation in the process of extracted-honey production is explained in detail, with photographic reproductions and drawings to make the text more plain. Beginning with the chapter on "Preparing Colonies for the Honey-flow," the booklet concludes with a description of "Pack-ages for Extracted Honey."

Many helpful and valuable suggestions will be found within the 44 pages this booklet contains, and it is a pleasure to announce its addition to our Bee-keepers' 10-cent Library. Order by name or specify Number 25.

CHICAGO

Do You Love SWEETS?

Ralph Waldo Emerson Did

He said you can attain to royalty by loving sweets.

"He who knows what SWEETS . . . are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man."

"HOW to come at these?"

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*

Want to know how?

Send \$1.00 for a year's subscription to

The Guide to Nature

Arcadia, Sound Beach, Conn.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, "a bee-man" and a naturalist.

HOW TO KEEP BEES!

By Anna Botsford Comstock. A most entertaining and practical book for the beginner. Tells a beginner's experiences in a way to help other beginners.

PRICE \$1.10 POSTPAID.

The A. I. Root Co., Medina, Ohio.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the

wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, Jan. 8.

BLAKE-LEE CO.

CHICAGO.—Sales dragged somewhat during the latter part of December, and so far this month; yet the market is in good shape, and there is no particular change in values.

Chicago, Jan. 6.

R. A. BURNETT & CO.

ZANESVILLE.—The demand for honey is not quite so brisk, which is not strange in view of the holiday season just over. Stocks are about sufficient to take care of present needs. Best white comb goes to the retail grocery trade at 18 to 19. In a jobbing way prices would be a cent or two lower. Best white extracted in 60-lb. cans is quoted at 10 cts. Producers receive for beeswax 30 cts. in trade, 28 in cash.

Zanesville, Jan. 8.

E. W. PEIRCE.

ST. LOUIS.—The trade in honey is still very moderate, and we can not report any improvement in the demand. We quote fancy white comb honey at 16 to 17; No. 2, 15; light amber, 12 to 14; dark, 9 to 11. Considerable honey is sold by the crate for fancy Colorado and other western honey at \$3.75; No. 2 at \$3.50; amber color, \$2.75 to \$3.25, according to quality; dark, \$2.40 to \$2.50. Extracted honey is quotable as follows: Southern light amber, in barrels and half-barrels, 7 cents; dark, 6 to $6\frac{1}{2}$; in five-gallon cans at half a cent higher. White clover California, 9 to $9\frac{1}{2}$; light amber, $8\frac{1}{2}$. Beeswax is in good demand at 30 for prime; inferior and impure sells for less.

St. Louis, Jan. 6. R. HARTMANN PRODUCE CO.

An Active Season Just Ahead

A carload of perfectly new goods is just on hand from the factory. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for spring. Frames, and other inside fixtures too, should be put together now; and as this is a dull season with most of our customers, the work can be done now with no extra expense.

If you are wanting any special goods, orders ought to be in our hands within the next few days. Other cars will be coming from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

Our new catalog will be out, probably, before the first of February. If you are not on our mailing list, send us a postal-card request for this catalog, and it will be mailed as soon as they come from the printers. In the mean time you may order from the 1912 catalog. If you haven't one on file, a copy will be mailed immediately on request.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line, and we can give it to your entire satisfaction.

THREE PER CENT DISCOUNT FOR JANUARY CASH ORDERS

To those who buy now for next season, sending remittance with the order during the month of January subject to the conditions named below, we allow 3 per cent discount.

This discount will apply on all articles listed in our regular catalog at current corrected prices to date except as follows:

Tinned wire, paint, Bingham smokers, Porter bee-escapes, glass and tin honey-packages, scales, bees and queens, bee-books, papers, labels, printed matter, bushel boxes, seeds, and specialties not listed in our general catalog. Where any or all of these articles in a general order do not exceed fifteen per cent of the whole order, the discount may be deducted from the whole order, including these items which are otherwise excepted.

THE A. I. ROOT CO., MEDINA, O.

Kind Words from our Customers

The other swarm is doing finely. They are the best workers, and the best-natured bees I ever saw.
Windsor, Mo., Sept. 2. C. F. DAVIS.

Those queens you shipped me are laying finely.
Ft. Dodge, Ia., Sept. 3. E. E. TOWNSEND.

After increasing two of my hives to six I took out about 150 lbs. from the two original hives. I feel more and more interested every day.

CHAS. ESCHELBACH.

Cleveland, O., Sept. 24.

The southern-bred queen you sent me in May was put in a two-frame nucleus, and to date I have taken 80 sections from them. I think she will pass the 100 mark easily.

Kimberly, Ida., Aug. 30. EVERETT G. HAGER.

My bees have filled a second story with combs and honey, and my best colonies have filled three supers of the finest sections that were ever seen in this part of the country—all pure alfalfa honey.

Willows, Cal., Sept. 26. THOS. C. DAVIS.

I have been noting results where your queens have been used to resist European foul brood during my inspection work; in fact, I have tested a few in my own yard, and find them equal to the best in resisting foul brood, and I have good reason to believe that your stock has longer life than the lighter-colored strains of Italians.

Wooler, Ont., Oct. 1. WARRINGTON SCOTT.

THE BANK THAT PAYS 4 PER CENT

Honey reports continued from page 2.

INDIANAPOLIS.—Fancy white sells at 18 in ten-case lots; No. 1 white 1 ct. less; amber comb is in slow demand and at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. There is an excessive demand for comb honey, but very little is now being offered by producers. Beeswax is in good demand, and producers are being paid 30 cts.
Indianapolis, Jan. 8. WALTER S. POWDER.

ALBANY.—The honey market is, so to speak, "in statu quo"; light receipts and light demand, especially if not in good condition. There has been much white comb, 15 to 16; buckwheat, 13 to 14, if in good condition; otherwise prices from 10 to 12, as one can strike a customer. Extracted stock is light, 9. Beeswax, 30 to 32.
19. Beeswax, 34 to 32.
Albany, Jan. 8. H. R. WRIGHT.

BUFFALO.—The demand for all kinds of honey is pretty slow of late. The amount in the market is small for this time of the year. We think most of it is shipped in from the country. A good demand for a short time would cause prices to advance a little. We could get a big price for buckwheat if we could get it—none arriving. We quote fancy white comb, 17 to 18; No. 1 ditto, 16 to 17; No. 2 ditto, 12 to 14; amber, 10 to 12; white-clover extracted, 9 to 10; amber extracted, 7½ to 8½; dark extracted, 7½ to 8. Beeswax, 28 to 30.
Buffalo, Jan. 4. W. C. TOWNSEND.

C. F. WILDEY & SON, Proprietors

“If Goods are Wanted Quick, Send to Pouder.”

Many of my friends are calling my attention to the luxuriant sod of white clover which now covers our central States; and this feature, with the fact that bees went into winter quarters strong and with an abundance of wholesome stores, would indicate that this is going to be a piping good season for the wideawake bee-keeper. With these conditions in view I have, as usual, prepared myself with a very complete stock of the finest and latest equipments for those who are interested in the bee industry. Hives in all their different patterns and combinations; the Buckeye double-walled hive, Danzenbaker hives, regular dovetailed hives, and all equipped with supers of any design that may best suit your requirements. Sections, comb foundation, smokers, veils, and honey and wax extractors—everything required in the apiary; and the goods are here, so that you get prompt returns after placing your order here. To those who have not dealt here during the past twenty-four years I wish to explain that the goods handled are manufactured by The A. I. Root Co., and the kind that are in use by the most progressive everywhere, and my prices are the factory schedule, whether you require one hive or one hundred. If you've planned to place your order elsewhere I'd be grateful if you would submit a list of goods wanted for an estimate, and this would place you under no obligations whatever.

Many of the articles described in my catalog can be delivered by parcels post, and I am devoting special care to this line of business.

If you are in need of more finest honey for local demands I can supply you. Ask for my monthly quotations of the Indianapolis honey market.

I can use more beeswax on a cash or trade basis.

I should like to place my catalog in your hands.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

Tempus Fugit!

Two Latin words—written hundreds of times in our school-days—are especially applicable to-day. **TIME FLIES!** Another new year is fairly started. Days, weeks, months are fast speeding away. Almost before we realize it, spring and bee time will be here.

Most encouraging reports are being received, and indicate a great yield of clover honey the coming season. Surely now, if ever, the beekeeper should be prepared. Why not secure now the supplies you will probably need, and have your hives made up and painted, and all appliances ready before the rush of spring work is on? Remember, too, the January three per cent discount, which, on a fair-sized order, will more than pay your freight.

Of course, you will want **ROOT'S GOODS**, the time-tried and true, and shipment from "**OHIO'S BEE CENTER.**" Ask for a catalog if you haven't one.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

"First Lessons In Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, . . . HAMILTON, ILLINOIS

The Use of Root's

With the increased interest in and demand for the better grades of extracted honey, all beekeepers, large and small, are interested in honey-extractors. The time was when the small beekeeper thought it didn't pay to produce extracted honey, and, as a consequence, he lost quite a large per cent of the actual profit his bees might have made him. For instance, during the past summer, with the remarkable honey-flow there was in many localities, even in an apiary of ten colonies an extractor might have been made to pay for itself in a single day. Record honey-flows like this demand a rapid handling of the combs if the bees are to take advantage of the flow of nectar. They can not make new combs fast enough to store the nectar that must be gathered within a few hours, or it is lost. If the filled combs can be taken from a hive, extracted, and replaced at once, they will be filled again with astonishing rapidity, and hundreds of pounds of honey harvested that would otherwise have been lost.

A one-horse-power air-cooled gasoline-engine connected to an eight-frame extractor. For economy of floor-space and convenience of the levers this arrangement is perhaps the best.

For the small apiary the hand-run extractors are usually sufficient; but where any number of colonies are kept from which to produce honey for the market, the power-equipped extractors are by far to be preferred. Even the first cost is very moderate; and when the wonderful work done by these machines is taken into consideration it will readily be seen that the purchase of such a machine is an investment which yields the beekeeper a handsome profit.

The popularity of these machines is perhaps best estimated by reading letters received from a few of our customers who are using them, and from the fact that our trade in them is constantly increasing. We now have in the process of making, twelve Root Automatic Extractors for one beekeeper in the West, who has 2000 colonies of bees, and maintains 15 yards. Certainly this large beekeeper would not make such an investment were he not sure of results.

Honey Extractors

Our extractors are carefully made from selected materials, and with ordinary usage will last for years. All power machines are fully equipped ready for running. We make extractors in all sizes from two to eight frame, and the power machines in four, six, and eight frame size, or larger, if ordered special. The prices range from \$9.50 for a small hand-run machine to \$52 for an eight-frame power-equipped machine. A one-horse-power air-cooled engine is \$60, and a 1¾ horse-power water-cooled, \$65.

These machines are run by a one-horse-power gasoline-engine which may be put to so many other good uses about the place you will wonder how you ever got along without it.

A word about the power extractor I purchased from you through H. L. Jones, of Goodna. I found it to work very satisfactorily, and it will do all it is claimed to do, and more. I use the gasoline-engine for several purposes besides driving the eight-frame extractor, such as driving the washing-machine for the lady of the house, and corn cracking and grinding. I consider it one of the best speculations I made in connection with the apiary.

Pittsworth, Queensland.

F. C. GOLDER.

Yours of the 16th, also the brake-band for power-extractor, came to hand. Thanks for sending it so promptly. This is my second season with the power extractor. I would not be without it now, even if I had only fifty colonies.

DAVID RUNNING.

Grindstone City, Mich., July 19, 1910.

Uncapping Knife

Just a word about the new steam uncapping knife which seems to go quite naturally with the power extractors. No more perfect device has ever been put into the hands of beekeepers, and one who has any considerable amount of uncapping to do should not be another season without this knife. Steam may be generated for this in a half-gallon can over a single-burner oil-stove. We furnish the knife complete with the hose for \$5.00, and with boiler for \$6.00.

As regards the steam uncapping-knife, I think it a grand investment, so far ahead of the cold knife that it will pay any ordinary beekeeper to have the outfit. I purchased an outfit one year ago for my home yard, and thought so much of it that I got another this year for my outyard.

WM. ELLIOTT.

Adelaide, Ont., September 28, 1911.

I received the extractor I ordered of you some time ago. It arrived in good shape. I set it up and extracted 143 quarts of honey, and sold it at 35 cts. a quart. The extractor is just fine—does the work completely.

F. D. KING.

Athens, Ohio, Aug. 16, 1912.

The engine I got of you this spring has done fine. We ran it all fall, and never had any trouble at all.

V. V. DEXTER.

North Yakima, Wash., Jan. 18, 1911.

PRINTING

The GRAY PRINTING COMPANY Fostoria, O.

Bigger Hatches With Only 1 Gal. Oil To Hatch—One Filling of Lamp!—

Get our new Free Book No. 100 on X-Ray Incubators and Brooders. Shipped direct from factory to you. No agents—no dealers. Guaranteed to please. Freight prepaid anywhere! The X-Ray is the one incubator today that's built on the right principle with the lamp underneath, in the center, and not on the side. This means perfect distribution of heat in the egg-chamber and no outside cold. We use a large oil tank holding four to eight quarts of oil—making only one filling of the lamp, but just four quarts are all that's needed for hatch. Old style machines have to be filled every day. The X-Ray saves both work and money! Heat is regulated by our patented automatic trip which cuts down flame at burner when egg chamber gets too hot—this is a big saving of oil. The ever successful

X-RAY INCUBATOR

has other exclusive and proven features that you will like. It opens from the top—has two double glass panels so you can see the thermometer at any time without letting in outside air on eggs. Ventilate or turn eggs by simply raising the lid. There are no sliding heavy drawers to break the eggs. X-Ray is heated to hatching temperature in just 15 minutes—others take 4 to 8 hours because of their old style principle. X-Ray is made of all genuine California redwood, covered completely with enamel, steel, beautiful rosewood finish, legs galvanized, strongly braced. Every X-Ray incubator fully guaranteed. X-Ray results are the biggest results.

Write Today For Free Book No. 100

Learn all about X-Ray construction—why X-Ray is entirely different and wonderfully better than any other. Read why women and all mere beginners have such big success every time with the X-Ray! Write today—this is very important news—worth money!

W. N. SCARFF, New Carlisle, Ohio

Bees Thrive and Owners Prosper

in the

San Joaquin Valley

California

Here is the beekeeper's opportunity. Conditions are just right for his business and there's a hungry market right at home. Great cities like San Francisco and Los Angeles make steady, profitable markets. And think of the thousands of pounds shipped to eastern markets.

The 200,000 people now in the San Joaquin Valley have only made a beginning in developing its marvelous agricultural resources. Over seven million acres of wonderful crop-producing soil are awaiting the men who will set them at work. Your dollars will have greater earning power here; your brain and muscle will count for more.

The best of it is that you can buy this land with water developed, or with water rights, at about \$125 an acre, on favorable terms. You can get quick results. Most of the land was wheat-fields or grazing land, and it is easily put into alfalfa, one of the best bee foods. You have the advantages of long summers, and then there is no time that you can not do out-of-doors work comfortably and profitably.

You will find good schools, good roads, telephones, rural delivery, electric light and power, trolleys, and a "get-together-and-help-each-other" spirit that makes the newcomer feel at home at once.

The Santa Fe has published a folder about the San Joaquin Valley which is full of information for the homeseeker. It gives the experiences of people who have taken up different lines of farming, and tells of the results they have secured.

Read the book; then see the country. It will cost but little. Go now, while work is slack. The Santa Fe runs low-fare homeseekers' excursions to California, and elsewhere southwest, on first and third Tuesday each month. Time on the road, only three days from Chicago. I will gladly send the San Joaquin Valley folder free and give you full information about trains and fares.

SEEDS

Hill's Evergreens Grow

All hardy stock—twice transplanted—root pruned. Protect buildings, stock, crops. Hill's Evergreen Book, illustrated in colors. Free. Write today. D. Hill Nursery Co., Inc., 246 Cedar St., Dundee, Ill. Evergreen Specialists

The A. I. Root Co.:

The three-frame nucleus shipped by you on Aug. 31 came safely this morning. The bees were in excellent condition, despite the extremely hot weather of Saturday and Sunday. By their aid I have strengthened a weak colony, with every prospect of being able to winter it successfully.

ANDREW J. MONTGOMERY.

Oak Park, Ill., Sept. 2.

The A. I. Root Co.:

Herewith I append my crop report. I had six colonies May 1, 1912; have taken 550 lbs. of comb honey, and increased to 12 colonies. Honey is mostly from poplar, alsike, and basswood—no white clover worth mentioning. If weather conditions are favorable next spring we shall get a great flow from white clover. It looks good now. I have sold nearly all my honey at 20 cts. I haven't enough to supply my customers. I forgot to mention in my report that my best colony produced 177 sections, nearly all fancy. Said colony has not swarmed since 1903.

EDWARD BLACKSTONE.

Cumberland, O., Aug. 26.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

Convention Notices

PROGRAM OF THE NATIONAL BEEKEEPERS' CONVENTION TO BE HELD AT CINCINNATI, OHIO, WEDNESDAY AND THURSDAY, FEB. 12 AND 13.

The meeting will be called to order at 10 A. M., when a committee on credentials will be appointed. Meeting will then adjourn for the filing of delegates' credentials.

AFTERNOON SESSION.

1 P. M.—The following order of business will be observed:

1. Appointment of a committee on resolutions; a committee on constitution; an auditing committee, and a committee on good of the order.

2. President's address.

3. Vice-president's report.

4. Secretary's report.

5. Treasurer's report.

6. Directors' report.

7. Legislative Committee's report.

8. Proposed amendments.

EVENING SESSION, 7 P. M.

1. Address.—"Needs of the Western Beekeepers," by Wesley Foster, Boulder, Col.

2. Discussion.

3. Address.—"Why the Production of Comb Hon-

ey should be Increased," by Ernest R. Root, of Medina, Ohio.

4. Discussion.

MORNING SESSION, 8 A. M.

1. Report of the Auditing Committee.

2. Amendments to the constitution.

3. Incorporation of the National.

4. Election of officers and directors.

5. Report of committee on uniform grading-rules—buyers and producers.

6. Discussion of uniform shipping cases.

7. Other business.

AFTERNOON SESSION, 1 O'CLOCK.

1. Address.—"Some Recent Achievements, with suggestions for 1913," by Dr. B. N. Gates, of Amherst, Mass.

2. Discussion.

3. Short talks by the delegates; each delegate will be called on for an address on any topic he sees fit to select.

4. Question-box.

After much correspondence the Grand Hotel, located at the corner of Fourth and Central Avenues, has been selected as our headquarters. The hotel will hold about five hundred people. The rates for rooms (European plan) are from \$1.00 each person, up, without bath, and \$2.00 up, with bath. The convention will be held on the second floor. All sessions will be open to the public; but the voting will be done only by the delegates.

A list of the hotels is as follows:

Hotel Alms (American plan), \$3.00 up.
Bristol Hotel (European plan), 50 cts. up.
Burnett House (American plan), \$2.50 up.
Hotel Emery (European plan), \$1.00 up.
Gerdes Hotel (European plan), \$1.00 up.
Grand Hotel (European plan), \$1.00 up.
Gibson House (European plan), \$1.50 up.
Hotel Havlin (European plan), \$1.50 up.
Honing Hotel (European plan), \$1.50 up.
Hotel Hoerner (European plan), 50 cts. up.
Hotel Lackman-Stag (European plan), \$1.00 up.
Hotel Oxford (European plan), 50 cts. up.
Munro Hotel-Stag (European plan), \$1.00 up.
Pallace Hotel (American plan), \$2.00 up.
Princeton Hotel (European plan), 75 cts. up.
Hotel Rand (European plan), 50 cts. up.
Hotel Savoy (European plan), \$1.00 up.
Hotel Sinton (European plan), \$2.00 up.
Stag Hotel (European plan), 50 cts. up.
Sterling Hotel (American plan), \$2.00 up.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

HOTBED SASH.

The time is at hand when many are preparing for winter or early spring vegetables. If you are interested we would be pleased to send you a copy of our booklet, "How to Make and Run a Hotbed."

We are also prepared to furnish hotbed sash made of cypress, the everlasting wood, either K. D. or put together without or with the glass at the following prices:

One sash in flat, no glass.....\$.90
Five sash in flat, no glass..... 4.25
Ten sash in flat, no glass..... 8.00

LEWIS BEEWARE MEANS

GOOD QUALITY, SCIENTIFIC WORKMANSHIP
CAREFUL PACKING
EFFICIENT SERVICE

Send for Annual Catalog which will tell you who is your nearest Distributor.
G. B. Lewis Company, Watertown, Wis.

Put together, 10 cts. each extra; painted, 10 cts. each for each coat of paint. Glazed with 8 x 10 glass, \$1.10 each extra. This makes the price in lots of ten, put up, glazed and painted two coats of paint, \$2.20 each; or without the paint, \$2.00. As regularly furnished, the sash are grooved for glass to be butted; but we also furnish at the same price, when specified, rabbeted sash to allow glass to be lapped and puttied in.

SECOND-HAND FOUNDATION MILLS.

We have to offer the following list of foundation machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, 2 1/4 x 10-inch heavy hexagonal brood mill. An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0139, 2 1/2 x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, 2 1/2 x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0142, 2 1/2 x 6 hexagonal thin-super mill in fair shape. Price \$10.00.

No. 0151, 2 1/2 x 6 hexagonal cell extra thin-super mill, one bad cell, otherwise in good condition. Price \$12.00.

No. 0152, 2 1/2 x 6 hexagonal thin-super mill, extra good for regular-width super foundation. Price \$12.00.

No. 0153, 2 1/2 x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0154, 2 1/2 x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0156, 2 1/2 x 6 extra-thin-super mill, fair. Price \$10.00.

No. 0157, 2 1/2 x 6 thin-super mill, in good condition. Price \$12.00.

No. 0160, 2 1/2 x 6 hexagonal thinsuper mill, in good condition. Price \$12.00.

No. 0164, 2 1/2 x 6 hexagonal thin-super mill, in fair condition. Price \$10.00.

No. 0165, 2 1/2 x 6 hexagonal extra-thin-super mill, in fair condition. Price \$11.00.

No. 0166, 2 1/2 x 6 hexagonal thin-super mill in extra good condition. Price \$14.00.

No. 0167, 2 1/2 x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0176, 2 1/2 x 6 extra-thin-super mill in fair condition. Price \$12.00.

No. 0180, 2 1/2 x 6 hexagonal thin-super mill, in fair condition. Price \$10.00.

No. 0182, 2 1/2 x 6 hexagonal thin-super mill, very good condition. Price \$20.00.

No. 0183, 2 1/2 x 6 hexagonal thin-super mill, very good condition. Price \$14.00.

No. 0187, 2 x 10 round-cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0191, 2 x 10 round-cell Pelham mill in good condition for this kind of mill. The bases of the cells are not natural shape, but the walls are regular. Price \$7.00. Sample mailed free if interested.

No. 0193, 2 1/2 x 10 hexagonal medium-brood mill; very good condition. Price \$18.00.

No. 0194, 2 1/2 x 10 hexagonal medium-brood mill, in good condition. Price \$18.00.

No. 0195, 2 1/2 x 10 hexagonal medium-brood mill, in good condition. Price \$18.00.

No. 0197, 2 1/4 x 10 hexagonal medium-brood mill in very good condition. Price \$20.00.

No. 0198, 2 1/2 x 10 hexagonal medium-brood mill, in very good condition. Price \$20.00.

No. 0199, 2 1/2 x 10 hexagonal medium-brood mill in very good condition. Price \$20.00.

No. 0200, 2 1/2 x 10 hexagonal medium-brood mill, in good condition. Price \$18.00.

I received the queen you sent, replacing the one I lost, which was unexpected to me. I did not in any way expect you to make the loss good. I have the six now, all fine queens, and good even layers. I am proud of them. One increased the colony; reared a daughter, and led out a fine September swarm. I saved her, and now have my seventh Italian queen. I have only 20 colonies, and have extracted over 100 lbs. from each this year.

Berino, N. M., Sept. 10.

M. P. GIBSON.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet recting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$3.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

Name

Street Address or R. F. D.

Town

G.B.C. 1-15-13 State

The untimely death on May 30, 1911, of Mr. W. Z. Hutchinson, author of

Advanced Bee Culture

marked the passing of one of the most brilliant writers who have ever championed the cause of the honey-bee. . . . Perhaps no better tribute to this talented man could be given than that contained in the following paragraph from a testimonial article on Mr. Hutchinson's life by Prof. A. J. Cook, in *Gleanings*:

"No one could know him and his work without convincing proof that he stood in the very front ranks of our beekeeping fraternity. His quick intellect, coupled with his close attention to details, won for him, at the very start, phenomenal success as a queen-breeder. To this, apiculture owes its great good fortune in securing his life-long service in its development. He was temperamentally exact and methodical, transparently honest, and if I were to select one word to characterize our brother it would be genuineness. He was delightfully companionable, and always alert for any new idea or suggestion touching the interests of the work to which he was so entirely devoted. His quick apprehension, and terse clear-cut style as a writer, made him a most reliable exponent of all that was latest and best in the theory and practice of his beloved art."

Nearly 500 Subjects Pertinent to Modern Bee-keeping are Authoritatively Discussed

ADVANCED BEE CULTURE is a beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that the many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth. A volume whose appearance and unquestionable worth justly entitle it to a place in the library of every bee-keeper. No more important work on this fascinating subject has recently appeared.

Most fortunate for all beekeepers is the fact that Mr. Hutchinson's life was spared just beyond the point when he had completed his reading and correction of the editorial proofs of the new edition of *ADVANCED BEE CULTURE*. Only a few short days after an editorial by Mr. E. R. Root, editor of *Gleanings in Bee Culture*, who revised Mr. Hutchinson's book, had appeared, the call came, and this sterling, upright man, whom everybody loved, was taken home. Read what Mr. Root has to say of Mr. Hutchinson's book:

As a writer on bees Mr. Hutchinson has few equals. For clearness and accuracy of judgment he is second to none. His enthusiasm shines forth on every page. His selection of the new and useful from an extended discussion is intuitive. The last edition of "*Advanced Bee Culture*," as well as the new edition before, is made up of the best ideas of our best experts, properly classified and condensed by the master of the art of boiling down discussions. I do not hesitate to say that this is one of the most valuable books on bees that was ever put out; and while its title would indicate that it is designed only for the advanced beekeeper, yet I am sure that a large number of beginners in the business will find it exceedingly helpful and interesting, especially if they will take it up in connection with some other work like the "*A B C and X Y Z of Bee Culture*," or any text-book designed especially for the beginner class.

\$1.50 Buys a Two-dollar Value

ADVANCED BEE CULTURE costs \$1.00 per copy. *GLEANINGS IN BEE CULTURE* (semi-monthly)—known and read by beekeepers throughout the world—\$1.00 for an annual subscription. It is our pleasure, however, to offer this interesting and most useful combination—the book here described, and *GLEANINGS* one year, both for \$1.50. It is a value you will very seldom find—really it is a good \$2.00 worth for \$1.50.

Foreign postage, 60 cents extra; Canadian postage, 30 cents extra.

You Want a KEROSENE Not a GASOLINE Engine

GASOLINE IS 3 TIMES TOO COSTLY

In buying your farm engine, remember this: gasoline has become terribly expensive, and you can't use anything in a gasoline engine BUT gasoline. In six months the price of gasoline has nearly doubled. Still going up and up. You would not buy a horse that would eat ONLY OATS--WHY, then, buy an engine that uses ONLY ONE FUEL?

World's Supply of Gasoline Running Short

Automobile users are fast exhausting the world's supply of gasoline. Hence the enormous and constantly increasing price. The 1,200,000 automobilists in 1913 will use up almost HALF A BILLION GALLONS OF GASOLINE. Think how that will further push up the price!

KEROSENE--THE PERFECT FUEL

Kerosene is cheap--costs but two-fifths as much as gasoline--and the price remains about the same--yet two pints of kerosene furnish the same power as three pints of gasoline. That's 50 per cent more power and 60 per cent less price. Kerosene isn't dangerous--no need of an insurance permit. It won't explode--it won't evaporate, either. Not so with gasoline.

AMAZING DETROIT 15 Days' Free Trial

Price now \$29.50 and up, stripped. The "DETROIT" is the only engine that handles coal oil successfully; uses alcohol, gasoline and benzine, too. Starts without cranking--Basic patent--only three moving parts--no cams--no sprockets--no gears--no valves--the utmost in simplicity, power and strength. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Engine tested just before crating. Comes all

ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric-light plant. Sent any place on 15 days' free trial. Don't buy an engine till you investigate amazing, money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write we'll allow you SPECIAL EXTRA-LOW INTRODUCTORY PRICE.

DETROIT ENGINE WORKS, 5 Bellevue Avenue, DETROIT, MICH.

BARGAIN!

Here's the greatest REAL bargain on farm engines you ever saw. My new 1913 Model starts at a touch. It's the simplest to run--most staunchly constructed--sure in action--economical in operation--and develops more than rated h. p. 13-4 to 15 h. p. These

"falcon" SUPPLIES

Made by Mr. Falconer since
the early seventies at
Falconer, N. Y.

Among our supplies are many handy specialties: in fact, throughout our whole catalog we list only the convenient, handy articles necessary to success, and do not try to confuse with impractical or unnecessary items. Yes, our catalog is the simplest and the easiest from which to order of any ever published. Send postal for copy.

TWO OF OUR CONVENIENCES

Comb-holder

Fits to side of hive for hanging the frames during manipulating. Price, each, 25 cts. Postage east of Mississippi, 9 cts.; postage west of Mississippi, 12 cts.

Page Feeder

Placed over frames; pronounced the best spring feeder made. Price, each, 35 cts. Postage east of Mississippi, 16 cts.; west of Mississippi, 24 cts.

Write for samples of our foundation and Red Catalog postpaid.
All goods guaranteed. A trial will convince you.

NEW STOCK

The A. I. Root Co., of Syracuse are constantly receiving goods, and now good time to order to them for the next year early

We are now receiving goods for next season, and it would be a good time for you to do likewise.

Send in your list for supplies that you will need, and quotations will be mailed you. Catalog for 1913 is not yet out, but you can use 1912. If you have no catalog, one will be mailed on request.

THE A. I. ROOT CO., SYRACUSE, N. Y.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION,
DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and en-

tirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, Jan. 20.

BLAKE-LEE CO.

DENVER.—We quote comb honey in a jobbing way at the following figures: No. 1, \$3.05; choice, \$2.90; No. 2, \$2.70. Extracted honey, white, 9; light amber, 8; strained, 6½ to 7. We pay 26 in cash and 28 in trade for clean yellow beeswax delivered here. THE COLORADO HONEY-PRODUCERS' ASSOCIATION.

Denver, Jan. 18. FRANK RAUCHFUSS, Manager.

CHICAGO.—This past week has shown renewed activity in the honey market; and while the supply is ample, the prices are fairly well maintained. The best grades of white comb honey bring 16 to 17 cts. per lb., with a shading of 1 to 3 cts. per lb. on the lower grades, according to quality and color. Extracted clover and basswood ranges from 9 to 10, with other grades and kinds at about 8. Beeswax is steady at from 30 to 32, according to color and cleanliness.

R. A. BURNETT & Co.
Chicago, Ills., Jan. 20.

CINCINNATI.—The demand for honey at the present time is rather quiet, and we do not look for a change until about the middle of next month. However, we quote fancy double-decker comb honey at \$3.75 to \$4.00 a case; fancy extracted honey in 60-lb. cans at 9 to 10; and amber extracted honey in barrels at from 6½ to 8, according to the quality and quantity purchased. The above are our selling prices, not what we are paying. For strictly choice bright yellow beeswax we are paying from 28 to 30 cts. delivered here.

Cincinnati, Jan. 9. THE FRED W. MUTH CO.

An Active Season Just Ahead

A carload of perfectly new goods is just on hand from the factory. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for spring. Frames, and other inside fixtures too, should be put together now; and as this is a dull season with most of our customers, the work can be done now with no extra expense.

If you are wanting any special goods, orders ought to be in our hands within the next few days. Other cars will be coming from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

Our new catalog will be out, probably, before the first of February. If you are not on our mailing list, send us a postal-card request for this catalog, and it will be mailed as soon as they come from the printers. In the mean time you may order from the 1912 catalog. If you haven't one on file, a copy will be mailed immediately on request.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line, and we can give it to your entire satisfaction.

INDIANAPOLIS.—Fancy white sells at 18 in ten-case lots; No. 1 white 1 ct. less; amber comb is in slow demand and at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. There is an excessive demand for comb honey, but very little is now being offered by producers. Beeswax is in good demand, and producers are being paid 30 cts.

Indianapolis, Jan. 20. WALTER S. POWDER.

ZANESVILLE.—The honey market is about as active as could be expected so soon after the holidays. and prices are practically unchanged. We quote No. 1 white comb honey in single-case lots at 19, with some reduction on larger orders. Extracted in 60-pound cans brings 10 to 11. Producers are receiving for beeswax 30 cts. in exchange for supplies, or 28 cash.

Zanesville, Jan. 17.

E. W. PEIRCE.

CINCINNATI.—The demand for comb and extracted honey is light, with a good supply. No. 1 white comb honey sells in large lots at \$3.60 per case of 24 sections. There is no demand for off grades. White extracted honey in 60-pound cans is selling from 9½ to 10; light amber in barrels, 7 to 7½; in 60-lb. cans, 8 to 8½. Beeswax, fair demand, sells at \$33.00 per hundred. The above are our selling prices, not what we are paying.

Cincinnati, Jan. 17. C. H. W. WEBER & Co.

NEW YORK.—Comb honey is fairly well cleaned up. Some little lots are still arriving, but none of any large size. The demand is fair at unchanged prices. The market on extracted honey is decidedly dull. The high prices this season for fancy stocks such as white clover and California sage have lessened the demand to some extent, and some companies have quit packing altogether. While the supplies are not large of the above named, they are sufficient to meet the demand, at prices ruling same as were furnished last. West Indian honey is weakening considerably, and is selling now at about 73 to 75 cts. per gallon, according to quality. Beeswax is quiet at 30 to 31.

New York, Jan. 20. HILDRETH & SEGELKEN.

Can You HANDLE FORTY APIARIES?

READ THIS LETTER

Say, friend Tyrrell, you have besieged me with letters and cards from the request you made to your readers on page 479. Well, I never saw or heard of such a flood of mail. I never had any idea that you did have so many subscribers before, and, too, many of them write the best letters I believe I ever received. Well, it just did me good to look over them, and I wish you could have been here and gone over them with me.

And now I want to thank you for what you said, and I assure you that as soon as possible I will return the favor, not only to you but your many interesting readers, who have written so many good and cheering letters to me. I declare I don't know just how to express myself over the matter, but I must feel something as a great "big-hearted" fellow feels over a good old-fashioned hand-shaking at the close of a good meeting, when the good spirit is at its best ebb.

The Latest Word on Poultry in the Backyard

Readers of GLEANINGS are familiar with the fact that the Farm Journal is usually up-to-the minute on poultry, as on other topics.

Our series of remarkable booklets—"Poultry Secrets," "\$6.41 per Hen per Year," "The Million Egg Farm," "Duck Dollars," etc.—were each the last word in their particular fields.

We now announce a new booklet, "EGG SECRETS," written especially for owners of a few hens, and more particularly for "back-yard" beginners aiming to supply themselves with fresh eggs for the table. Only one other book of real value has been specially designed for this class of poultry owners, and this is already out of date, so rapid is the development of poultry methods.

"Egg Secrets" Tells How

—tells it simply and plainly—makes everything clear as daylight. Tells you how to start with a couple of brood hens and a setting of eggs, if you want to start that way, or how to jump right in with ten or more pullets. Tells you how to feed and care for them—how to do everything to succeed—and makes it all so easy that you'll wonder why all people with back yards haven't got the gumption to free themselves for ever from the tyranny of the egg pirates.

J. M. Foster wrote "Egg Secrets." He is the Egg King—the owner of the famous Rancocas Farm—and what he doesn't know about poultry isn't learnable. Mrs. Foster made an experiment with this back-yard egg factory, and she made a go of it. You ought to hear what she says about it. It's all in the book. Now, we say that *you* can do this very thing as sure as two and two make four.

Get the Book--then YOU will know YOU can

You needn't have a lot of chickens—you needn't have a big yard. You needn't worry about the roosters crowing and disturbing the neighborhood—for they are strictly barred in this plan. You eat them before they are old enough to be a nuisance. Just a few hens will suffice for an average family—less for a small one—and besides the waste scraps of meat and vegetables from your table you need to feed them only a grain ration. It's the easiest sort of thing when you've read the book and know thoroughly the principles of the thing.

Special money-back offer. "Egg Secrets" and Farm Journal--only \$1. Mail Coupon today

GUARANTEE

Any subscriber may discontinue the Farm Journal at any time, for any reason, or for NO reason, and the unused proportion of his remittance will be refunded

—Publishers Farm Journal.

The Farm Journal is for the beginner and the expert poultryman, gardener, fruit grower; for the women folks, the men, the boys and girls. It is the paper that keeps the youngsters at home in the evenings. It is particularly valuable for people who are thinking of country things—chickens, and the like. Cheerful, amusing, intensely practical, absolutely clean. And when the time is up it will stop. So sure are we that you will like the Farm Journal that we give you full right to stop it at *any* time and get back the remaining part of your money. (See Guarantee.)

If "Egg Secrets" and the Farm Journal are not all you expect and more, you may return them in ten days and we will refund their cost. We trust you and don't want your money unless you want us to have it.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

"First Lessons in Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the **\$1.00**
American Bee Journal, one year, Both for Only

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

PAINT WITHOUT OIL

Remarkable Discovery that Cuts Down the Cost of Paint Seventy-five Per Cent.

A Free Trial Package is Mailed to Every One Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

A FARMER'S GARDEN

IS without real serious meaning to many thousand farmers because they think it is too hard work or it is not convenient to work a horse. So many farmers fail to understand what truly wonderful possibilities there are in modern hand tools.

IRON AGE Wheel Hoes and Drills

do all of the sowing, hoeing, cultivating, weeding, furrowing, ridging, etc., in any garden, with better results, far less work and some real pleasure for the operator. 38 or more combinations at \$2.50 to \$12.00. Ask your dealer about them and write us for new booklet, "Gardening with Modern Tools" also copy of our paper "Iron Age Farm and Garden News"—both are free.

WHY NOT

Write Galloway Today?

WHAT about? E-N-G-I-N-E-S!! You need a Galloway 5 H.P. right this minute, but you needn't sell your cheapest horse to buy one, for I will not only save you \$115.50 on the price but will trust you for it besides. Who will do as much for you as Galloway?

WHY

should you buy an engine from any one but me? My factories are greatest—my engines best by actual test—prices lowest for quality—free trial and payment terms most liberal. You know me. For years you have read about me in this paper. You know how my business has grown from a "shoe-string" up to the world's most colossal factory-to-farm success. You know the \$25,000 Spot Cash Bond that guarantees every Galloway Engine. Now I want you to know Galloway's startling new 1913—

\$5,000 Challenge

The sensational defy that Galloway casts in the teeth of every

engine competitor—a REAL challenge backed by REAL money that takes the wind out of every hostile sail. Write me for this \$5,000 Challenge. It's mighty good reading!

Save \$50 to \$300

Why should you hesitate when you can get the best engine made at a saving of \$50 to \$300? I guarantee you this saving backed by the Galloway \$25,000 Satisfaction Bond. You simply can't take any chances when you deal with me. A penny postal brings my splendid big Engine Book in 4 colors, and amazing Special 1913 Offer that knocks the spots out of anything you ever heard of. Mail that letter or postal today, **SURE!**

AMERICAN FENCE

ORIGINAL AND GENUINE

STEEL POSTS AND GATES

Over half the farmers of America are recommending American Fence. Let the judgment of this majority be your guide.

American Steel
Fence Post
Cheaper than
Wood and More
Durable.
Get Catalog.

More For Your Money

AMERICAN FENCE has always been the economical fence. Now it's a better investment than ever. The same superior steel (open hearth or Bessemer), the same big, stiff wires—but the galvanizing is even better than ever, being heavier, more permanent, giving added insurance against rust. Investigate American Fence. Note the prices and you'll do some fencing this year.

Dealers In Every Place

where farm supplies are sold. Shipped to them in carload lots, thus saving freight charges and enabling dealers to sell at lowest prices, giving buyer the benefit.

Olds' Red River Valley Seed Potatoes

Red River Six Weeks

Best extra early variety for the market gardener. Makes a quick growth, ripens evenly, produces well.

This is the year to buy, when prices are low. Our Red River seed is unequalled.

Red River Early Ohio

Early Ohio is the most popular early in the country. Olds' Red River Ohios are unsurpassed for purity, smoothness, fine appearance and strong vitality.

We sold 17,000 bushels last year. Get our prices now.

Red River White Ohio

Similar to Red Early Ohio except in color, which is a fine white, or nearly so. Just as early, just as good in quality and very productive. 557 bushels have been grown on one acre.

Red River Irish Cobbler

Irish Cobbler is the successor to Bliss Triumph and is fast superseding it as an extra early market variety. It outyields Triumph, looks better and eats better.

Our Red River grown seed is the best obtainable.

Red River Seed Potatoes, grown in the cold northwest, are ahead of all others for quick early maturity, vigorous growth and great productiveness.

Olds' Seed Potatoes have a national reputation, 25 years' experience growing and handling; our potatoes are known in every section and we are acknowledged headquarters for pure seed.

Send Postal for 88 Page Catalog giving correct descriptions and true illustrations of the best in Seed Potatoes, Corn, Oats, Barley, Field Seeds, Garden Seeds, Poultry Supplies and Tools.

L. L. OLDS SEED COMPANY, Drawer G, Madison, Wis.

HONEY AND WAX FOR SALE

No. 2 fall comb honey, \$2.50 per case of 24 sections. QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Clover honey of finest quality, in new 60-lb. cans at 9 cts. per lb. J. P. MOORE, Morgan, Ky.

FOR SALE.—Finest quality of extracted honey. J. F. MOORE, Tiffin, Ohio.

FOR SALE.—We offer broken comb honey in 65-pound tins at 10 cents per pound, f. o. b. Cincinnati. C. H. W. WEBER & Co., Cincinnati, O.

Finest extracted water-white alfalfa and amber alfalfa honey in 5, 10, and 60-lb. cans. Samples 10 cents. DADANT & SONS, Hamilton, Ill.

FOR SALE.—A limited quantity of rich-flavored fully ripened Spanish-needle honey. F. B. CAVANAGH, Hebron, Ind.

FOR SALE.—Finest quality clover and clover-bass-wood honey in 60-lb. cans. C. J. BALDRIDGE, Homestead Farm, Kendaia, N. Y.

FOR SALE.—Buckwheat honey with a little clover in; fine quality, in 60-lb. cans, at 8 cts. N. DEWEY, Adrian, Mich.

FOR SALE.—White-clover and basswood honey in new 60-lb. square cans. Write for prices, and state how much wanted. L. S. GRIGGS, 711 Avon St., Flint, Mich.

FOR SALE.—Raspberry honey. New five-gallon can, \$6.00, F. O. B. Waymart, Pa. Sample 10 cts., deducted from first order. J. D. HULL & BRO., Honesdale, Pa.

We have just received a large shipment of extracted white-clover honey from a prominent producer. This honey has a very heavy body, and was well ripened before it was taken off the hives. We ship it, if preferred, in liquid form without extra charge, in new tin cans holding five gallons each, two cans in a case. Ask for a free sample of lot 81, and our price. We have some fine fall amber extracted. An early fall flow caught a producer before he could get his white honey off, so his crop had to be graded as amber. Free sample and the price for asking. Lot No. 69. THE A. I. ROOT CO., Medina, O.

HONEY AND WAX WANTED

WANTED.—Comb, extracted honey, and beeswax. R. A. BURNETT & Co., 173 So. Water St., Chicago.

WANTED.—Comb and extracted honey and beeswax. Write us. HILDRETH & SEGELKEN, New York.

What do you get for your honey? Would you be willing to produce a thoroughly ripe grade of honey and get one-half cent or more above market price? We do it and market our own honey. We should like to hear from beekeepers in California and elsewhere who will supply us with this grade of honey, as our trade demands more honey than we can produce of this quality.

SPENCER APIARIES Co., Nordhoff, Cal.

QUIRIN-TH-QUEEN-BREEDER, Bellevue, Ohio.

Convention Notices

The annual meeting of the Kansas State Beekeepers' Association will be held in the Commercial Club rooms at Topeka, Feb. 4, 5. We want to see a large number of beekeepers present. The meetings will close with a banquet Tuesday evening, Feb. 5.
Topeka, Kans., Jan. 15. O. A. KEENE.

The Eastern Illinois fourth annual beekeepers' convention will be held in St. Anne, Ill., Feb. 4 and 5, with an evening session on the 4th. Several prominent beemen have promised to be present, and the meeting promises to be more than usually interesting. An important feature of its program will be an

argument on large hives vs. small ones. C. P. Dandant will take the side of the large hives and its advantages, while H. S. Doby will take the opposite side, and will give his reason why small hives are preferable. This question has called the attention of beekeepers of late more than ever; and those who can attend these meetings at St. Anne will have the pleasure of listening to men who have had experience. Aside from a few addresses the question-box method will prevail. Bring your question along, and be one of us, and get your picture "took" for yourself and the bee journals.

St. Anne, Ill., Jan. 6. T. G. WILLIS, Pres.

PROGRAM OF THE NATIONAL BEEKEEPERS' CONVENTION TO BE HELD AT CINCINNATI, OHIO, WEDNESDAY AND THURSDAY, FEB. 12 AND 13.

The meeting will be called to order at 10 A.M., when a committee on credentials will be appointed. Meeting will then adjourn for the filing of delegates' credentials.

AFTERNOON SESSION.

1 P. M.—The following order of business will be observed:

1. Appointment of a committee on resolutions; a committee on constitution; an auditing committee, and a committee on good of the order.
2. President's address.
3. Vice-president's report.
4. Secretary's report.
5. Treasurer's report.
6. Directors' report.
7. Legislative committee's report.
8. Proposed amendments.

EVENING SESSION, 7 P. M.

1. Address.—"Needs of the Western Beekeepers," by Wesley Foster, Boulder, Col.
2. Discussion.
3. Address.—"Why the Production of Comb Honey should be Increased," by Ernest R. Root, of Medina, Ohio.
4. Discussion.

MORNING SESSION, 8 A. M.

1. Report of the Auditing Committee.
2. Amendments to the constitution.
3. Incorporation of the National.
4. Election of officers and directors.
5. Report of committee on uniform grading rules—buyers and producers.
6. Discussion of uniform shipping cases.
7. Other business.

AFTERNOON SESSION, 1 O'CLOCK.

1. Address.—"Some Recent Achievements, with Suggestions for 1913," by Dr. B. N. Gates, of Amherst, Mass.
2. Discussion.
3. Short talks by the delegates; each delegate will be called on for an address on any topic he sees fit to select.
4. Question-box.

After much correspondence the Grand Hotel, located at the corner of Fourth and Central Avenues, has been selected as our headquarters. The hotel will hold about five hundred people. The rates for rooms (European plan) are from \$1.00 each person, up, without bath, and \$2.00 up, with bath. The convention will be held on the second floor. All sessions will be open to the public; but the voting will be done only by the delegates.

A list of the hotels is as follows:

- Hotel Alms (American plan), \$3.00 up.
- Bristol Hotel (European plan), 50 cts. up.
- Burnett House (American plan), \$2.50 up.
- Hotel Emery (European plan), \$1.00 up.
- Gerdes Hotel (European plan), \$1.00 up.
- Grand Hotel (European plan), \$1.00 up.
- Gibson House (European plan), \$1.50 up.
- Hotel Havlin (European plan), \$1.50 up.
- Honing Hotel (European plan), \$1.50 up.
- Hotel Hoemer (European plan), 50 cts. up.
- Hotel Lackman-Stag (European plan), \$1.00 up.
- Hotel Oxford (European plan), 50 cts. up.
- Munro Hotel-Stag (European plan), \$1.00 up.
- Palace Hotel (American plan), \$2.00 up.
- Princeton Hotel (European plan), 75 cts. up.
- Hotel Rand (European plan), 50 cts. up.
- Hotel Savoy (European plan), \$1.00 up.
- Hotel Sinton (European plan), \$2.00 up.
- Stag Hotel (European plan), 50 cts. up.
- Sterling Hotel (American plan), \$2.00 up.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

ALSIKE CLOVER SEED.

The season for seeding alsike clover is near at hand, early spring seeding being recommended as best. Prices of clover seeds remain high again this year because of a short supply. We have a stock of choice alsike which we offer, while it lasts, at 25 cts. per lb.; \$3.50 per peck; \$6.50 per half bushel; \$12.25 per bushel; 2 bushels for \$24.00, bags included; no extra charge.

BEEWAX IN BAGS BY FREIGHT.

We find that the discrimination against shipments of beeswax in double bags applies only to such shipments originating on the Pacific coast which take the transcontinental-commodity tariff. In other western territory, west of Chicago and the Mississippi River, beeswax in barrels, boxes, or double bags, is rated first class. When packed in single bags it takes one class higher, which is 1½ times first class.

JOB LOT OF PAINTED SCREEN CLOTH AT BARGAIN PRICES.

We have secured a lot of painted wire cloth in short rolls, remnants, and with slightly defective weave, at a big reduction from the regular price. Of the regular black painted cloth, 12 mesh to the inch, 33 wire, we have pieces from 10 ft. and up in length, 10 to 48 inches in width, at 1 ct. per square foot for full pieces, or 1½ cts. cut to the length you specify, so long as the supply holds out. Of 14 mesh No. 34 wire, there are pieces from 12 to 44 inches wide, 10 feet and up in length, at 1½ cts. per square foot for full pieces, or 2 cts. for cut pieces. Of 16 mesh, No. 34 wire, the kind which will keep out the smallest mosquitoes, 18 to 48 inches wide, 30 feet and up in length, 1½ cts. per foot for full pieces, and 2½ cts. for cut pieces. There is also an assortment of drab-painted and green-painted cloth of the same sizes of mesh and wire at the same prices as for the black, and in addition. Of 18 mesh, No. 34 wire, from 12 to 44 inches wide, a number of pieces at 2 cts. per square foot in full pieces, or 3 cts. for cut pieces; also a few pieces of 20 mesh at the same price.

We are preparing a printed list, giving the length and width of each piece, which we shall be pleased to mail to enable you to select what you can use. Here is a chance to buy screen cloth at a lower price than you have ever had. First come first served.

SWEET CLOVER.

The interest in this clover continues to increase as the knowledge of its value finds its way to up-to-date farmers. There was issued by the Ohio Agricultural Experiment Station, last July, circular No. 129, on the subject of sweet-clover growing, the result of investigation by Mr. W. A. Lloyd, of the Department. The five-point summary given at the close of this bulletin is as follows:

1. Sweet clover is not a noxious weed.
2. It is of unquestioned value in restoration of worn and eroded soils.
3. It is a valuable forage crop, and worthy of use as such in situations where better crops can not be successfully grown.
4. It shows a very wide adaptation to Ohio conditions, and its extensive use is advisable in the reclamation of much of the semi-abandoned land of the State.
5. In seeding, its lime and inoculation requirements should be carefully looked after.

We are prepared to supply all reasonable demands for seed at the following prices, having in stock a total of five to eight tons of seed:

PRICE LIST OF SWEET-CLOVER SEED.

- Hulled white biennial (*Melilotus alba*), 1 lb., 24c; 10 lbs., \$2.20; 25 lbs., \$5.25; 100 lbs., \$20.00.
 - Unhulled white ditto, 1 lb., 17c; 10 lbs., \$15.50; 25 lbs., \$3.50; 100 lbs., \$13.00.
 - Hulled yellow biennial (*Melilotus officinalis*), 1 lb., 28c; 10 lbs., \$2.60; 25 lbs., \$6.25; 100 lbs., \$24.00.
 - Unhulled yellow ditto, 1 lb., 21c; 10 lbs., \$1.90; 25 lbs., \$4.50; 100 lbs., \$17.00.
 - Hulled yellow annual (*Melilotus Indica*), 1 lb., 14c; 10 lbs., \$1.20; 25 lbs., \$2.75; 100 lbs., \$10.00.
- Samples mailed free on request.

A New Principle— Only 1 Gal. Oil to Hatch One Filling of Lamp

**Saves
Money!**

Write today for
new Free Book on X-Ray
Incubators and Brooders. Learn
everything about this time, labor and
money-saving hatcher. It is shipped *direct*
to you from factory. No agents—no dealers.
Guaranteed to please you. Orders filled same
day received. Freight prepaid *anywhere!*

Just takes one gallon of oil to a hatch—one filling of the lamp.
Old style machines use 3 to 5 gallons of oil to hatch and lamp has
to be filled every day! The X-Ray incubator is built on an entirely
new and different principle from the old style, wasteful machines. It
has lamp underneath, square in the center, where it ought to be—and not
on the side where no perfect temperature could possibly be maintained. With
lamp underneath X-Ray's egg-chamber is always at even heat—always at a
perfect hatching temperature. X-Ray's lid has two double-glass panels—thermometer
can be seen every minute without raising top and chilling eggs.

X-RAY INCUBATOR

"Built Different From All Other Machines"

has only proven perfect heat regulator. Our automatic trip—an exclusive patented
feature—cuts down flame at burner when egg-chamber gets too hot—a fine thing—a
saving of lots of oil and money! No excess heat escapes—every bit is used to good
advantage! To use the X-Ray means less egg-handling, less oil, less heat generated,
absolutely no waste, no filling of lamp during hatch, no fumes, no danger of
"cooking" eggs—always even heat over egg-chamber.

**WRITE FOR FREE BOOK No. 100—Get Factory-Direct
Price on X-Ray Incubators and Brooders**

The X-Ray Brooder has same perfect heating system as the famous X-Ray
Incubator. Raises every chick worth raising. Get free book today.

Don't Be Satisfied With Anything Less Than Championship Hatches!

Let Jim Rohan and His World's Champions
Tell You How To Get Them Every Time

SEND me your name and address on a postal. I want to mail you my World's Championship Hatching Facts. I want to tell you how you can get championship hatches—how you can beat *every other incubator* in your neighborhood. I want to tell you how you can make the *most money*, at *least expense*, with *least effort*. I want to tell you how my champions (shown above) get 100 per cent hatches and how they raise their chicks. I will tell you how and why my Belle City won six world's championships against machines costing from two to five times *more*. And I'll quote you a price that will *surprise you*—the lowest price you ever heard of, for the incubator that has established an unequalled record for perfect hatching. Won't you write me a postal? The facts, proofs, and information I'll send will guide you *right* in making the wisest selection of an incubator and brooder. My

World's Champion Belle City The 6-Time Winner

is making big money for 195,720 other folks, under all conditions. I want to send you letters from hundreds of them—tell you the reasons *why* my customers are my *friends*. I want to tell you exactly how my World's Champion Belle City is made—how I have embodied in *everything* that makes a hatcher *successful*. I want to tell you about my famous double walled hot-water brooders guaranteed to raise the chicks—all about my manufacturing, selling and shipping plan that makes my remarkably low price possible. I'll show you why you never before could get such *sure* profit-makers for so little money.

Write Me a Postal

Just say "Send World's Championship Hatching Facts." It's free. I'll quote you my lowest price, freight prepaid. I'll tell you *how* you can have 1, 2 or 3 months home test of a World's Championship Belle City at my risk—how I protect you by my personal 10 year guarantee. I'll send you all these sensational facts if you just write me a postal. Do it *now*. Jim Rohan, Pres.

Cleanliness in Tree Culture

VOL. XV. FEB. 15, 1918 NO. 4

Some of our subscribers may find it convenient to club their magazine orders, and we shall be glad to handle such for them. Below we give a few of our special clubbing offers. If you are especially interested in a clubbing rate on some other magazine not mentioned, write for price.

GLEANINGS IN BEE CULTURE, YOUTH'S COMPANION,	1 year \$1.00, 1 year \$2.00,	Both for \$2.40.
GLEANINGS IN BEE CULTURE, THE GARDEN MAGAZINE, Garden Profits, 250-page book,	1 year \$1.00, 1 year \$1.50,	All for \$2 00.
GLEANINGS IN BEE CULTURE, PICTORIAL REVIEW,	1 year \$1.00, 1 year \$1.00,	Both for \$1.50.
GLEANINGS IN BEE CULTURE, The WEEKLY ENQUIRER (Cincinnati),	1 year \$1.00, 1 year \$1.00,	Both for \$1.40.
GLEANINGS IN BEE CULTURE, WEEKLY INTER OCEAN (Chicago),	1 year \$1.00, 1 year \$1.00,	Both for \$1.25.
GLEANINGS IN BEE CULTURE, THE FRUIT-GROWER,	1 year \$1.00, 1 year \$1.00,	Both for \$1.50.
GLEANINGS IN BEE CULTURE, BETTER FRUIT,	1 year \$1.00, 1 year \$1.00,	Both for \$1.50.
GLEANINGS IN BEE CULTURE, AMERICAN POULTRY JOURNAL,	1 year \$1.00, 1 year \$1.00,	Both for \$1.50.
GLEANINGS IN BEE CULTURE, FARM POULTRY,	1 year \$1.00, 1 year .50,	Both for \$1.15.
GLEANINGS IN BEE CULTURE, FARM JOURNAL,	1 year \$1.00, 5 years \$1.00,	Both for \$1.25.

Because of additional postage required, these offers do not apply in Canada nor foreign countries.

All orders handled very promptly, and at a minimum of trouble to yourself. Subscriptions to begin with the first possible issue unless otherwise stated.

The A. I. Root Company, Medina, Ohio

“falcon” SUPPLIES

Made by Mr. Falconer since the early seventies at Falconer, N. Y.

Among our supplies are many handy specialties; in fact, throughout our whole catalog we list only the convenient, handy articles necessary to success, and do not try to confuse with impractical or unnecessary items. Yes, our catalog is the simplest and the easiest from which to order of any ever published. Send postal for copy.

TWO OF OUR CONVENIENCES

Comb-holder

Fits to side of hive for hanging the frames during manipulating. Price, each, 25 cts. Postage east of Mississippi, 9 cts.; postage west of Mississippi, 12 cts.

Page Feeder

Placed over frames; pronounced the best spring feeder made. Price, each, 35 cts. Postage east of Mississippi, 16 cts.; west of Mississippi, 24 cts.

Write for samples of our foundation and Red Catalog postpaid. All goods guaranteed. A trial will convince you.

Do You Love SWEETS?

Ralph Waldo Emerson Did

He said you can attain to royalty by loving sweets.

“He who knows what SWEETS . . . are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man.”

“HOW to come at these?”

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*

Want to know how?

Send \$1.00 for a year's subscription to

The Guide to Nature
Arcadia, Sound Beach, Conn.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, “a bee-man” and a naturalist.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and en-

tirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, Feb. 7.

BLAKE-LEE CO.

DENVER.—We quote comb honey in a jobbing way at the following figures: No. 1, \$3.05; choice, \$2.90; No. 2, \$2.70. Extracted honey, white, 9; light amber, 8; strained, 6½ to 7. We pay 26 in cash and 28 in trade for clean yellow beeswax delivered here. THE COLORADO HONEY-PRODUCERS' ASSOCIATION. Denver, Feb. 6. FRANK RAUCHFUSS, Manager.

INDIANAPOLIS.—Fancy white sells at 18 in ten-case lots; No. 1 white 1 ct. less; amber comb is in slow demand and at lower prices. Best extracted sells at 11 to 12 in five-gallon cans. There is an excessive demand for comb honey, but very little is now being offered by producers. Beeswax is in good demand, and producers are being paid 30 cts.

Indianapolis, Feb. 7.

WALTER S. POWDER.

ST. LOUIS.—The honey market is in the same state as reported in ours of January 18. The trade is small on comb honey as well as extracted, and more or less nominal. We quote fancy white at 16 to 17; No. 2 white at 15; light amber at 13 to 14; dark, 9 to 11; by the case, fancy white at \$3.65 to \$3.75; No. 2, \$3.40 to \$3.50; amber, \$2.75 to \$3.25, according to the quality; dark, \$2.40 to \$2.50. Broken and leaking honey sells for less. Extracted, Southern, in barrels and half-barrels, 7 cents for light amber; dark, 6 to 6½; in five-gallon cans, one-half cent higher. California, Utah, and Colorado honey is quotable at 9 to 9½; light amber, 8½, all in five-gallon cans. Beeswax is in good demand at 30 cents for prime; inferior and impure sells for less.

An Active Season Just Ahead

A carload of perfectly new goods is just on hand from the factory. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for spring. Frames, and other inside fixtures too, should be put together now; and as this is a dull season with most of our customers, the work can be done now with no extra expense.

If you are wanting any special goods, orders ought to be in our hands within the next few days. Other cars will be coming from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

Our new catalog will be out, probably, before the first of February. If you are not on our mailing list, send us a postal-card request for this catalog, and it will be mailed as soon as they come from the printers. In the mean time you may order from the 1912 catalog. If you haven't one on file, a copy will be mailed immediately on request.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line, and we can give it to your entire satisfaction.

Honey reports continued from page 2.

SCHENECTADY.—There is a very small stock of comb honey on our market, with prices unchanged. White extracted, plentiful, with demand light. Schenectady, Jan. 21. CHAS. MACCULLOCH.

BUFFALO.—Stock of honey in this market is small; trade is not taking very much. At the rate it is selling, there is enough arriving to keep well supplied. We quote fancy white comb, 17 to 18; No. 1, 16 to 17; No. 2, 13 to 14. No buckwheat is in the market. White extracted, 9 to 10; dark, 7 to 8. Beeswax, 28 to 30. Buffalo, Feb. 8. W. C. TOWNSEND.

KANSAS CITY.—The demand for both comb and extracted honey is still light, with light receipts. The supply is good. We quote No. 1 white comb 24-section cases at \$3.10 to \$3.25; No. 2 ditto, \$2.75 to \$3.00; No. 1 amber ditto, \$3.00; No. 2 ditto, \$2.75; extracted white, per pound, 8 to 8½; extracted amber, 7 to 8. Beeswax, per pound, 25 to 28. C. C. CLEMONS PRODUCE CO. Kansas City, Mo., Jan. 20.

LIVERPOOL.—No sales of California honey, but \$9.95 to \$10.20 per cwt. quoted. Retail sales of Jamaica, \$6.72 to \$7.44 is quoted. About 120 barrels of Chilian sold at \$6.24; No pile, \$6.48; pile 3, \$6.96; pile 2, \$7.44; pile 1, \$8.10. There is good enquiry for new crop for shipment at \$5.88 per cwt., c. i. l., average pile 3. Stocks not yet available. Beeswax, 13 bags of Chilian sold at \$34.62 to \$38.88 cwt. Market is quiet but steady. Liverpool, Feb. 1. TAYLOR & Co.

ZANESVILLE.—There is not much change in the honey situation since last report. Market is very quiet, but prices are about stationary. Best grades of white comb are quoted at 18 to 19 in one or two case lots; larger quantities at correspondingly lower prices. Best white extracted, 10 to 11. Producers receive for beeswax 28 cts. cash, 30 in trade. Wholesale market, 38 to 45, according to quantity and quality. Zanesville, O., Feb. 7. EDMUND W. PEIRCE.

CINCINNATI.—The demand for honey at the present time is rather quiet, and we do not look for a change until about the middle of this month. However, we quote fancy double-decker comb honey at \$3.75 to \$4.00 a case; fancy extracted honey in 60-lb. cans at 9 to 10; amber extracted in barrels at from 6½ to 8, according to the quality and quantity purchased. The above are our selling prices, and not what we are paying. For strictly choice bright yellow beeswax we are paying from 28 to 30 cts. delivered here. Cincinnati, Feb. 4. THE FRED W. MUTH CO.

“If Goods are Wanted Quick, Send to Pouder.”

Many of my friends are calling my attention to the luxuriant sod of white clover which now covers our central States; and this feature, with the fact that bees went into winter quarters strong and with an abundance of wholesome stores, would indicate that this is going to be a piping good season for the wideawake bee-keeper. With these conditions in view I have, as usual, prepared myself with a very complete stock of the finest and latest equipments for those who are interested in the bee industry. Hives in all their different patterns and combinations; the Buckeye double-walled hive, Danzenbaker hives, regular dovetailed hives, and all equipped with supers of any design that may best suit your requirements. Sections, comb foundation, smokers, veils, and honey and wax extractors—everything required in the apiary; and the goods are here, so that you get prompt returns after placing your order here. To those who have not dealt here during the past twenty-four years I wish to explain that the goods handled are manufactured by The A. I. Root Co., and the kind that are in use by the most progressive everywhere, and my prices are the factory schedule, whether you require one hive or one hundred. If you've planned to place your order elsewhere I'd be grateful if you would submit a list of goods wanted for an estimate, and this would place you under no obligations whatever.

Many of the articles described in my catalog can be delivered by parcels post, and I am devoting special care to this line of business.

If you are in need of more finest honey for local demands I can supply you. Ask for my monthly quotations of the Indianapolis honey market.

I can use more beeswax on a cash or trade basis.

I should like to place my catalog in your hands.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

FEBRUARY

The Month of Preparation...

This is, perhaps, the most convenient month for the beekeeper to prepare for the coming season. The fall work is done, and the spring work still a future consideration, while the weather for some weeks yet is likely to be such as to prevent all but the necessary outdoor work. Now is the time to take an inventory of supplies on hand, and, with the aid of the PEIRCE Catalog, make up an estimate of what will be required for the busy bee season. Send in a list of what you think you will need, and you will receive by early mail a statement of the cost. Get your supplies now and have hives nailed up and painted, and every thing ready for the good harvest ahead.

ROOT'S LINE from OHIO'S BEE-CENTER—Best goods; best freight, express and parcel-post service in the North Central States. Two per cent discount on February cash orders.

Have You Seen a Copy of the AMERICAN BEE JOURNAL

since C. P. Dadant took hold of it? He has made A NEW JOURNAL. Former subscribers wouldn't recognize it as the same paper. New subscribers send in letters of commendation every day.

Some of the NEW Features are:

A heavy cover of four pages, making 36 pages instead of 32.
About six times as many pictures and illustrations.
More interesting reading-matter, and more of it.
Higher-grade paper throughout.

Here is What One Subscriber says:

Allow me to congratulate you on the improvement in the Journal. It certainly hasn't lost any thing in changing hands. I noticed at the Des Moines convention many spoke encouragingly of the way the paper has been handled since "THE DADANTS" got it. YOU CAN COUNT ON ME.

Center Junction, Iowa.

W. S. PANGBURN.

Write for Sample Copy to-day, or send \$1.00 and we will send you the Journal for a full year.

AMERICAN BEE JOURNAL, Hamilton, Illinois.

Books for Beekeepers and Others

Any of these books on which postage is not given will be forwarded by mail postpaid, on receipt of price. As many of the bee-books are sent with other goods by freight or express, incurring no postage, we give prices separately. You will notice that you can judge of the size of the books very well by the amount required for postage on each.

10 | Advanced Bee Culture.....1 00

| Fifty Years Among the Bees. New edition. 1 00
By Dr. C. C. Miller. Dr. Miller is too well known among the bee-keeping fraternity to need any introduction. His book is charmingly written, and covers his experience in detail.

15 | Cook's Manual, cloth.....1 00

5 | Doolittle on Queen-rearing 95

15 | Langstroth on the Honey Bee, Revised edition..... 1 10

10 | Quinby's New Bee-keeping..... 90

5 | British Bee-keeper's Guide-book, by Thomas William Cowan, England 95

5 | The Honey-bee, by Thos. William Cowan..... 95

10 | How to Keep Bees..... 90

15 | Modern Bee-farm. By S. Simmins. New edition; cloth bound.....1 85

| Wax Craft, Cowan.....1 00

POPULAR BOOKS ON BEE CULTURE.

11 | The Bee People, Margaret W. Morley1 40

11 | The Honey-makers, Margaret W. Morley1 40

11 | Life of the Bee, Maeterlinck.....1 30

11 | The Swarm, Maeterlinck1 20

7 | The Bee-master of Warriow, Edwards 50

10 | Lore of the Honey-bee..... 1 90

| Alexander's Writings on Practical Bee Culture.
By the late E. W. Alexander, who conducted the largest apiary in the United States. A wonderfully interesting discussion of bee-keeping in its broadest phases. Any one can understand it; 35 chapters, 96 pages. Paper bound, 50 cts. postpaid.

| A Year's Work in an Out-apiary.....
By G. M. Doolittle. Packed full of most valuable information ever given to bee-keepers. A practical and interesting book by a very successful apiarist. Sale has reached nearly 5000 copies; 60 pages, paper bound; 50 cts. postpaid.

| The Townsend Bee Book.....
By E. D. Townsend. Written by one of the most progressive, successful, and extensive bee-keepers in the U. S., this book has been in great demand from the day of its announcement. Tells how to make a start with bees, and will greatly benefit beginners and experienced bee-keepers; 90 pages, paper bound, 50 cts. postpaid.

| Bee-keeping by Twentieth-century Methods, by J. E. Hand..... 50

The author shows not only how to control swarming, but how to treat foul brood without shaking, and discusses in a comprehensive way many other down-to-date apicultural problems and their solutions.

MISCELLANEOUS HAND-BOOKS.

5 | A B C of Carp Culture, by Geo. Finley 25

7 | A B C of Potato Culture, Terry** New edition, revised & enlarged; paper, 50c; cloth, 75c, mail 85c. This is T. B. Terry's first and most masterly work. It has really made a revolution in potato-growing, and has been reprinted in several foreign languages. By getting the ground in proper condition to grow great crops of clover, and turning this under, Terry succeeded, not only in getting more potatoes, but even better ones, and in producing them at less expense also, than by any plan or system be-

Postage.]

[Price without postage

fore the time he began his experiments in 1885. The book has already passed through three editions of many thousands. It not only includes potato-growing in the United States, but in Bermuda, the Island of Jersey, and other warmer parts of the world where "new potatoes" are raised for the express purpose of getting the high prices in the cities during January, February, and March. The book also gives special attention to the different and best methods for preserving and keeping seed potatoes in the very best condition to plant in all these different localities.

5 | A B C of Strawberry Culture,** by T. B. Terry..
New edition, revised and enlarged; paper, 45c; cloth, 68c; by mail, 75c.

After Terry's potato-book had obtained such a kind reception from farmers, market-gardeners, and others, he was induced to give his plan of growing strawberries, as he did potatoes, by plowing under great crops of clover, and, like the potato-book, his writings gave a new impetus to strawberry-growing; in fact, some of his pupils declare that, aside from the picking, they can grow strawberries almost as cheaply per bushel as potatoes. By following Terry's teachings, thousands of people have not only been able to give their families but the whole wide world better strawberries, and more of them, than they ever saw before.

6 | Asparagus Culture..... 40

6 | Alfalfa Culture..... 40

8 | Barn Plans and Out-buildings*..... 90

2 | Celery for Profit, by T. Greiner**..... 25

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book.

10 | Fruit Harvesting, Storing, Marketing, etc..... 75

It has been well said that it is an easier matter to grow stuff than to sell it at a proper price after it is grown; and many men fail, not because they are inexperienced in getting a crop, but because they do not know how to sell their crops to the best advantage. This is the first book of the kind we have had as an aid in selling. It not only tells all about picking, sorting, and packing, but gives all the best methods for storing for one or two days or a longer time. It also tells about evaporating and canning when there is a glut in the market. It discusses fruit packages and commission dealers, and even takes in cold storage. It is a new book of 250 pages, full of illustrations. Publisher's price, \$1.00.

| Farming with Green Manures, postpaid**..... 90

This book was written several years ago; but since competent labor has got to be so expensive, and hard to get, many farmers are beginning to find they can turn under various green crops cheaper than to buy stable manure, and haul and spread it—cheaper, in fact, than they can buy fertilizers. This book mentions almost all plants used for plowing under, and gives the value compared with stable manure. Some of the claims seem extravagant, but we are at present getting good crops, and keeping up the fertility, by a similar treatment, on our ten-acre farm.

7 | Farm, Gardening, and Seed-growing*..... 90

10 | Fuller's Grape Culturist**.....1 15

5 | Garden and Farm Topics, Henderson**..... 60

12 | Gardening for Pleasure, Henderson*.....1 10

While "Gardening for Profit" is written with a view of making gardening pay, it touches a good deal on the pleasure part, and "Gardening for Pleasure" takes up this matter of beautifying your homes and improving your grounds, without the special point in view of making money out of it. I think most of you will need this if you get "Gardening for Profit." This work has 246 pages and 134 illustrations. (Retail price \$2.00.)

12 | Gardening for Profit**.....1 10

This is a late revision of Peter Henderson's celebrated work. Nothing that has ever before been put in print has done so much toward making market-gardening a science and a fascinating industry. Peter Henderson stands at the head, without question, although we have many other books on these rural employments. If you can get but one book, let it be the above. It has 376 pages and 138 cuts. (Retail price \$2.00.)

8 | Gardening for Young and Old, Harris**..... 90

This is Joseph Harris' best and happiest effort. Although it goes over the same ground occupied by Peter

Postage.] [Price without postage

Henderson, it particularly emphasizes thorough cultivation of the soil in preparing your ground; and this matter of adapting it to young people as well as old is brought out in a most happy vein. If your children have any sort of fancy for gardening it will pay you to make them a present of this book. It has 187 pages and 46 engravings.

3 | Grasses and Clovers, with Notes on Forage Plants..... 20

This is by Henry A. Dreer, author of the book "Vegetables Under Glass" that has had such a large sale of late. This little book tells how six tons of grass has been grown to the acre, and gives much other valuable matter.

10 | Greenhouse Construction, by Prof. Taft... 1 15**

This book is of recent publication, and is as full and complete in regard to the building of all glass structures as is the next book in regard to their management. Any one who builds even a small structure for plant-growing under glass will save the value of the book by reading it carefully.

12 | Greenhouse Management, by Prof. Taft..... 1 15**

This book is a companion to Greenhouse Construction. It is clear up to the times, contains 400 pages and a great lot of beautiful half-tone engravings. A large part of it is devoted to growing vegetables under glass, especially Grand Rapids lettuce, as well as fruits and flowers. The publisher's price is \$1.50; but as we bought quite a lot of them we can make a special price as above.

5 | Gregory on Cabbages, paper*..... 20**5 | Gregory on Squashes, paper*..... 20****5 | Gregory on Onions, paper*..... 20**

The above three books; by our friend Gregory, are all valuable. The book on squashes especially is good reading for almost anybody whether they raise squashes or not. It strikes at the very foundation of success in almost any kind of business.

| Handbook for Lumbermen..... 05**5 | Home Pork-making; 125 pages, illustrated..... 40**

I think it will pay well for everybody who keeps a pig to have this book. It tells all about the care of the pig, with lots of pictures describing cheap pens, appliances, all about butchering, the latest and most approved short cuts; all about making the pickle, barreling the meat, fixing a smoke-house (from the cheapest barrel up to the most approved arrangement); all about pig-troughs; how to keep them clean with little labor; recipes for cooking pork in every imaginable way, etc. Publisher's price is 50 cents, ours as above.

15 | How to Make the Garden Pay..... 1 35**

By T. Greiner. Those who are interested in hot-beds, cold-frames, cold green-houses, hothouses, or glass structures of any kind for the growth of plants, can not afford to be without the book. Publisher's price \$2.00.

10 | How to Keep Well and Live Long..... 90

The above book by T. B. Terry is, in my opinion, destined to relieve more pain, sickness, and death than any other book in the whole world that has ever come to my knowledge. This is pretty strong language, I admit; but since Mr. Terry commenced, years ago, to urge the importance of pure air, pure water, and a simple diet of good simple food in moderate quantities, the whole wide world, doctors included, seems to be gradually falling in with him. Of course, other good and wise men commenced a similar crusade for better health long before Terry did; but he seems to have a happy faculty of getting hold of people and keeping their attention. After you once start in with the book you will be pretty sure to read it to the end, and you will ever after be a better and a happier man or woman for having read it. We have a special low price for clubbing with GLEANINGS—that is, both for \$1.50. If you have already paid for GLEANINGS a year or more in advance you can have the book for 75 cents postpaid. Since it first came out, only a short time ago, we have sold nearly 1000 copies.

3 | Maple Sugar and the Sugar-bush..... 25****5 | Manures; How to Make and How to Use Them; in paper covers..... 30****6 | The same in cloth covers..... 65****5 | Nut Cultivist, postpaid..... 1 25****3 | Onions for Profit**..... 40**

Fully up to the times, and includes both the old onion culture and the new method. The book is fully illustrated, and written with all the enthusiasm and Even if one is not particularly interested in the busi-

Postage.] [Price without postage

ness, almost any person who picks up Greiner's books will like to read them through.

8 | Practical Floriculture, Henderson*..... 1 10**10 | Small-Fruit Cultivist, Fuller..... 75****2 | Experiments in Farming. By Waldo F. Brown. 08**

This little book ought to be worth its cost for what is said on each of the four different subjects; and the chapter on cement floors may be worth many dollars to anybody who has to use cement for floors, walks, or any thing else. In fact, if you follow the exceedingly plain directions you may save several dollars on one single job; and not only that, get a better cement floor than the average mason will make.

10 | Our Farming, by T. B. Terry..... 75****| Same, paper cover, postpaid..... 50**

In which he tells "how we have made a run-down farm bring both profit and pleasure."

If ordered by express or freight with other goods, 10c less.

10 | Talks on Manures*..... 1 35

By Joseph Harris. Written conversational style, which makes it very interesting reading. It covers the subject very completely; contains numerous analyses of manures and comparative tables. The use of technical language is avoided, which makes the book of greatest value to the practical farmer. A book of 366 pages, nicely bound in cloth.

10 | The Dollar Hen..... 90

The above book will be clubbed with GLEANINGS for one year at \$1.50; or if you have already subscribed a year or more in advance you can have the book postpaid for 75 cents.

My opinion is, that "The Dollar Hen" is not only one of the best books on poultry that we have at the present time, but it is worth nearly as much as a dozen other books. Perhaps this is extreme, but we have very few books that are strictly up-to-date, and still fewer that pitch right into the superstitions and humbugs now scattered all through our poultry books and journals.

5 | The New Rhubarb Culture..... 40**

Whenever apples are worth a dollar a bushel or more, winter-grown rhubarb should pay big. It does not require an expensive house nor costly appliances. Any sort of cellar where it will not freeze is all right for it; and the small amount of heat necessary to force the rhubarb costs very little. The book is nicely bound in cloth, full of illustrations, mostly photos from real work, 130 pages. Every market-gardener should have this book, for the lessons taught indirectly, in regard to forcing other crops besides rhubarb. Publisher's price 50c.

5 | Tile Drainage, by W. I. Chamberlain..... 35

Fully illustrated, containing everything of importance clear up to the present date.

The single chapter on digging ditches, with the illustrations given by Prof. Chamberlain, should alone make the book worth what it costs, to every one who has occasion to lay ten rods or more of tile. There is as much science in digging as in doing almost any thing else; and by following the plan directed in the book, one man will often do as much as two men without this knowledge.

5 | Tomato Culture..... 35

In three parts. Part first.—By J. W. Day, of Crystal Springs, Miss., treats of tomato culture in the South, with some remarks by A. I. Root, adapting it to the North. Part second.—By D. Cummins, of Conneaut, O., treats of tomato culture especially for canning-factories. Part third.—By A. I. Root, treats of plant-growing for market, and high-pressure gardening in general.

3 | Winter Care of Horses and Cattle..... 25

This is friend Terry's second book in regard to farm matters; but it is so intimately connected with his potato-book that it reads almost like a sequel to it. If you have only a horse or a cow, I think it will pay you to invest in a book. It has 44 pages and 4 cuts.

8 | What to Do, and How to be Happy while Doing It..... 65

The above book, by A. I. Root, is a compilation of papers published in *Gleanings in Bee Culture*, in 1886, '7, and '8. It is intended to solve the problem of finding occupation for those scattered over our land out of employment. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit-culture, poultry-raising, etc. Illustrated, 188 pages, cloth.

8 | Same, paper covers..... 40

Here's My New 1913 Model Galloway Spreader That I Want To Ship To Your Farm FREE!

No payment down—no bank deposit—no lease, notes or mortgages—no red tape or obligations of any kind whatever. I'll ship you this new, 1913 Model Galloway right to your farm for 30 or even 90 days trial absolutely free. I'm going to make this spreader prove its worth to you without a word of argument on my part whatever. Here's the way I'll do it: I'll put the spreader on your farm for a 30 to 90 days trial absolutely free. I'll put it right straight up to you. Figure out a series of tests that would make scrap iron and kindling out of any other spreader made—then try them on the Galloway. Load it up as full as she'll hold with the toughest, tramped down or frozen slough hay manure. Let your team trot and slam it in gear! Do you think that there is one other manufacturer in the world that would dare to hint at such a test as that? You know there isn't! But if you can think of a severer test, go ahead. I'll take all the risk and let you be the sole judge. If you think you can possibly get along without the Galloway after you have had the free trial, just send it back to me. I'll pay the freight both ways—you won't be out one cent. If you want to keep it, I'll guarantee to save you \$25 to \$50.

Get My Big 1913 Proposition NOW!

Four years ago I started working on the biggest, finest and most daring plan I've ever offered. Now I've got it perfected. I can't explain it here—there isn't room. But if you'll write me at once I'll tell you how you may get one of my 1913 Model Spreaders partly or entirely without its costing you one cent. I won't ask you to do any work—any soliciting or any canvassing. It's the fairest, cleanest, most amazingly generous, co-operative plan that you or anybody else ever heard of. Write me and I'll tell you all about it.

My Regular \$1 Book — "A Streak of Gold" — FREE

One of the most valuable books any farmer ever held in his hands. Explains fully, in plain language, how to make manure the greatest money crop on the farm, how to spread it, care for and use it. I'll send it free, also my 1913 Spreader Catalog and full details of my 1913 proposition. Send a letter or postal.

APPLE GROWING

The healthier the tree, the
better the fruit. The longer
trees are sprayed with
"SCALECIDE" the more
beautiful, healthful and
fruitful they become. "SCALECIDE" is the
acknowledged leader of all soluble oils—the only one
containing distinct fungicidal properties. "SCALE-
CIDE" will positively kill all soft-bodied sucking in-
sects without injury to the tree. Let us prove these
statements. Send today for free booklet "SCALE-
CIDE—the Tree Saver." Address B. G. PRATT
CO., Mfg. Chemists, 50 Church St., N. Y. City.

beginner. Tells a beginner's experiences in a way to help other beginners.
PRICE \$1.10 POSTPAID.

The A. I. Root Co., Medina, Ohio.

The Small Egg-Factory

If you are keeping a few hens in the back yard, or want to, you do not need or want 99 out of 100 poultry books that flood the country. **Q** You want something for **YOUR** needs, written especially for back-yard amateurs, whether beginners or experienced pullet owners.

There have been from time to time a few books written for you. All of them are now practically out-of-date. There is only one back-yard poultry authority that is up-to-the-minute, and that is our new booklet

“Egg Secrets”

J. M. Foster wrote “Egg Secrets.” He is the Egg King—the owner of the famous Rancocas Farm—and what he doesn't know about poultry isn't learnable. Mrs. Foster made an experiment with this back-yard egg factory, and she made a go of it. You ought to hear what she says about it. It's all in the book. Now, we say that *you* can do this very thing as sure as two and two make four.

Now, here's the fact:—The table scraps in an average family will furnish chickens with all their food except the grain—in return for these scraps and a little grain you will get eggs the year round—fine, clean, delicately flavored eggs whose history you know and which you can open without trepidation and eat with delight.

Then you needn't care whether eggs are thirty cents or eighty cents—you can have yours always, and *always fresh*, for practically nothing.

These are facts. Don't let any thing that you've heard, or some neighbor's experience sway you. Some people couldn't raise English sparrows. Bear in mind that there are many thousands of people who are running a back-yard egg factory successfully—who are eating their own fresh eggs daily while you are getting the cold-storage variety at exorbitant prices.

Stop Paying Outrageous Prices for Unspeakable Eggs

You needn't have a lot of chickens—you needn't have a big yard. You needn't worry about the roosters crowing and disturbing the neighborhood—for they are strictly barred in this plan. You eat them before they are old enough to be a nuisance. Just a few hens will suffice for an average family—less for a small one—and besides the waste scraps of meat and vegetables from your table you need to feed them only a grain ration. It's the easiest sort of thing when you've read the book and know thoroughly the principles of the thing.

Special money-back offer. “Egg Secrets” and Farm Journal--only \$1. Mail Coupon today

GUARANTEE

HONEY AND WAX FOR SALE

Raspberry-clover honey in new 60-lb. cans at 9 cts. Sample, 5 cts. J. D. HULL & BRO., Honesdale, Pa.

No. 2 fall comb honey, \$2.50 per case of 24 sections. QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Clover honey of finest quality, in new 60-lb. cans at 9 cts. per lb. J. P. MOORE, Morgan, Ky.

FOR SALE.—Finest quality of extracted honey. J. F. MOORE, Tiffin, O.

Finest extracted water-white alfalfa and amber alfalfa honey in 5, 10, and 60-lb. cans. Samples 10 cents. DADANT & SONS, Hamilton, Ill.

FOR SALE.—Finest quality clover and clover-bass-wood honey in 60-lb. cans. C. J. BALDRIDGE, Homestead Farm, Kendaia, N. Y.

FOR SALE.—White-clover and basswood honey in new 60-lb. square cans. Write for prices, and state how much wanted. L. S. GRIGGS, 711 Avon St., Flint, Mich.

We have just received a large shipment of extracted white-clover honey from a prominent producer. This honey has a very heavy body, and was well ripened before it was taken off the hives. We ship it, if preferred, in liquid form without extra charge, in new tin cans holding five gallons each, two cans in a case. Ask for a free sample of lot 81, and our price. We have some fine fall amber extracted. An early fall flow caught a producer before he could get his white honey off, so his crop had to be graded as amber. Free sample and the price for asking. Lot No. 69. THE A. I. ROOT CO., Medina, O.

HONEY AND WAX WANTED

WANTED.—Comb, extracted honey, and beeswax. R. A. BURNETT & CO., 173 So. Water St., Chicago.

WANTED.—Comb and extracted honey and beeswax. Write us. HILDRETH & SEGELKEN, New York.

What do you get for your honey? Would you be willing to produce a thoroughly ripe grade of honey and get one-half cent or more above market price? We do it, and market our own honey. We should like to hear from beekeepers in California and elsewhere who will supply us with this grade of honey, as our trade demands more honey than we can produce of this quality.

SPENCER APIARIES CO., Nordhoff, Cal.

Select thoroughbred Indian Runner ducks, white and fawn. Eggs, \$1.00 per dozen; \$7.00 per 100.
J. C. WHEELER, 921 Austin Boulevard, Oak Park, Ill.

Fawn and white Indian Runner duck eggs, \$1.00 per 11; \$7.00 per 100. Day-old ducklings, 25 cts. each. Mailing list free.
KENT JENNINGS, Mt. Gilead, O.

FOR SALE.—Pure White Indian Runner ducks, drakes and eggs. Pure-white eggs guaranteed. From duck laying 110 eggs in 120 days. Free copy of "The Indian Runner Duck Book" by Valentine with each order. APPLECROFT, South Manchester, Ct.

Pure Spencer Strain White Indian Runner ducks. Wonderful layers of large, pure-white eggs. Eggs, \$5.00 per 12, \$25.00 per 100. Unsatisfactory hatchings, regardless the cause, replaced at half price.
A. R. WILLIAMS, Winchester, Ind.

Pure-white I. R. ducks, foundation stock direct from Spencer flock, California. Grandest strain on earth. Lay large, pure-white eggs. American standard Fawn and White I. R. ducks. Grand breeding stock for sale. Write me your wants. I will start you with the best. Satisfaction guaranteed.
C. O. YOST, Box D, Rt. 4, Winchester, Ind.

Indian Runner Duck Eggs.—A golden opportunity to secure eggs from beautiful birds, and great egg-layers, at a moderate cost; eggs, 15, \$1.00; \$6.00 per 100; eggs from large rich red S. C. R. I. Reds, same price. "How to rear and produce an abundance of eggs from the Twentieth Century Egg-machine" goes with each order. Fertility and safe delivery absolutely guaranteed.
ROBT BIRD, Pinckneyville, Ill.

BEEKEEPERS DIRECTORY

Nutmeg Italian queens, leather color, after June 1, \$1.00.
A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies.
J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1913; beautiful, hustling, gentle workers. Send for price list.
E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.
H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.
QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

Convention Notices

The Pennsylvania State Beekeepers' Association will meet in Harrisburg, Feb. 25, 26. This will be an important meeting. The legislature will be in session. Every beekeeper should be present. A very interesting program will be served. Don't miss it.
Liverpool, Pa. H. C. KLINGER, Sec.

The Northern Michigan branch of the National Beekeepers' Association holds its next annual meeting at Traverse City, Mich., March 19 and 20, 1913. Headquarters and meeting place will be at Hotel Whiting. A good program will be prepared, and we hope for an excellent meeting. You are invited.
East Jordan, Mich. IRA D. BARTLETT, Sec.

The Jefferson and St. Lawrence Co. Beekeepers' Societies will hold a joint meeting in the Business Men's rooms, Ogdensburg, N. Y., Thursday and Friday, Feb. 20 and 21. These meetings are held under direction of the Bureau of Farmers' Institutes, New York State Department of Agriculture.

PROGRAM.

THURSDAY, 10:30 A. M.

Address of Welcome, F. C. Hutchins.
Response, A. A. French.
Reports or officers.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

DO NOT LET YOUR BEES STARVE.

We have been experimenting for several years back, and have finally succeeded in making a candy that can be given to bees during mid-winter that we believe to be fully the equal of combs, in large flat pie-plates, 2-lb. size. The "pies" can be laid upside down on top of the frames. The cushions can be put back in place, when the colony will be supplied with stores sufficient to take care of it for a month or two. This candy will not run down over the frames, nor daub the bees, and when placed directly over the cluster will be a guarantee against starvation. We can supply these pie-plates of candy, 2-lb. size, at 35 cts. apiece; 10 for \$3.00; 100 for \$25.00. We do not advise sending out a single cake by mail. We can, however, send a basket of four 2-lb. cakes by parcel post for \$1.25. Postage extra within 150 miles of Medina will be 46 cts.; 300 miles, 57; 600 miles, 68; 1000 miles, 79. If there should be sufficient demand for this candy we can have a supply at each of our branch offices and principal agencies. If you have colonies that are light in stores, and are liable to starve before they can be fed a liquid syrup in the spring, this special bee-candy for winter food will come in very handy. We are using hundreds of cakes of it.

BEES BY THE POUND TO SUPPLY WEAK OR DWINDLING COLONIES IN THE NORTH.

We have made arrangements whereby we can ship bees in pound packages during the month of March, from Appalachicola, Fla., to points in the North. Where the bees are en route longer than five days, and the weather is not severely cold, we can guarantee safe arrival. But in this connection it is but fair to say that bees can not be sent by parcel post—at least as we understand the ruling—and so we shall have to ship by express, at a rate and a half, or a half more than ordinary express. Prices of bees, until further notice, $\frac{1}{2}$ lb., without queen, \$2.00; 1 lb., \$3.00; 2 lbs., \$5.00; 3 lbs., \$6.00. The price of the queen will be extra. Untested queens, to go with bees, will be \$2.00; select untested, \$2.50; tested, \$3.00; select tested, \$4.00. To make up the cost of the package, add to it the cost of the queen. The express on a 1lb. package of bees from Appalachicola to extreme points in the North will not be more than 70 cents, and on a 2-lb., 90 cents. For less distances the expressage would be less. The express companies will soon make up a new schedule of rates; and when they do, it is safe to conclude that they will meet the new rates of parcel post. They have always met the postal rates before, and what they have done before they will do again.

We hope, before another issue, to have arrangements made so we can begin shipping to points in the middle West and far West. Announcements will be made later.

While our prices on bees may seem to be high, it should be remembered that we guarantee first-class pure Italian stock and safe arrival under the conditions named above.

SECOND-HAND FOUNDATION MILLS.

We have to offer the following list of foundation machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, $2\frac{1}{2}$ x 10-inch heavy hexagonal brood mill. An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0139, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0142, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, in fair shape. Price \$10.00.

No. 0152, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, extra good for regular-width super foundation. Price \$12.00.

No. 0153, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0154, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0156, $2\frac{1}{2}$ x 6 extra-thin-super mill, fair. Price \$10.00.

No. 0157, $2\frac{1}{2}$ x 6, thin-super mill, in good condition. Price \$12.00.

No. 0160, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, in good condition. Price \$12.00.

No. 0164, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, in fair condition. Price \$10.00.

No. 0165, $2\frac{1}{2}$ x 6 hexagonal extra-thin-super mill, in fair condition. Price \$11.00.

No. 0166, $2\frac{1}{2}$ x 6 hexagonal thin-super mill in extra good condition. Price \$14.00.

No. 0167, $2\frac{1}{2}$ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0176, $2\frac{1}{2}$ x 6 extra-thin-super mill in fair condition. Price \$12.00.

No. 0180, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, in fair condition. Price \$10.00.

No. 0182, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, very good condition. Price \$20.00.

No. 0183, $2\frac{1}{2}$ x 6 hexagonal thin-super mill, very good condition. Price \$14.00.

No. 0187, 2 x 10 round-cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0188, 2 x 10 round-cell medium-brood mill, in good condition. Price \$14.00.

No. 0189, $2\frac{1}{2}$ x 10 hexagonal medium-brood mill, in fine condition. Price \$18.00.

No. 0190, $2\frac{1}{2}$ x 10 hexagonal medium-brood mill, in good condition. Price \$18.00.

No. 0191, 2 x 10 round-cell Pelham mill in good condition for this kind of mill. The bases of the cells are not natural shape, but the walls are regular. Price \$7.00. Sample mailed free if interested.

No. 0193, $2\frac{1}{2}$ x 10 hexagonal medium-brood mill; very good condition. Price \$18.00.

No. 0195, $2\frac{1}{2}$ x 10 hexagonal medium-brood mill, in good condition. Price \$18.00.

No. 0197, $2\frac{1}{2}$ x 10 hexagonal medium-brood mill in very good condition. Price \$20.00.

No. 0199, $2\frac{1}{2}$ x 10 hexagonal medium-brood mill, in very good condition. Price \$20.00.

No. 0200, $2\frac{1}{2}$ x 10 hexagonal medium-brood mill, in good condition. Price \$18.00.

No. 0201, $2\frac{1}{2}$ x 12 hexagonal medium-brood mill in good condition. Price \$22.00.

No. 0202, $2\frac{1}{2}$ x 10 hexagonal medium-brood mill, in good condition. Price \$18.00.

The A. I. Root Co.:—

The first of last June I purchased of you a three-frame nucleus and an observation hive, and at that time you requested me to advise you what success I had with the outfit. My bees entered the super on the first of August, and up to the present time I have obtained 56 lbs. of comb honey, and the little chaps are still hard at work. Besides this I should judge there was from 30 to 40 lbs. of honey in the brood-chamber. It seems to me that this is a good showing. There is very little farming here—no buckwheat nor basswood, and we are on a peninsula not over $1\frac{1}{2}$ miles wide.

Woods Hole, Mass., Sept. 20. W. K. BUTLER.

ESTABLISHED 1891

TOEPPERWEIN & MAYFIELD CO.

(Incorporated)

Cor. Nolan and Cherry Sts.**San Antonio, Texas**

Factory and Warehouse.

To Our Friends and Patrons

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as all those engaged in the business.

Owing to the constantly increasing demand for comb foundation and beekeepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$100,000.00.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{3}{8}$ -inch frames, same as described in our catalog, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives.

Shortly before the death of Mr. Mayfield Mr. Udo Toepperwein sold his interest to Messrs. R. W. Hearne and B. L. Raborn, well-known business men of San Antonio. The retirement of the older members of the company will in no way change the policies of the new management except to increase materially the capital with the view of carrying a large stock of supplies. Mr. Morris, who has been practically the manager of the Toepperwein & Mayfield Co., continues with the new management.

It is the intention of the new management to increase materially the capital of the company, with the view of carrying a stock of supplies that will meet all the requirements of the trade. This will enable us to effect prompt shipments at all times, and thus avoid any delay and annoyance to customers on account of shortage of stock.

It will be our endeavor to accord our customers all possible courtesies and consideration in any matters that may arise. Mistakes will occur at times, as is only natural, and we only ask that they be brought to our attention so that they may be rectified. Our customers may be assured of the best quality of goods at as reasonable prices as are consistent with business methods.

Our new catalog on request. Address

TOEPPERWEIN & MAYFIELD CO., - San Antonio, Texas.

A Really Practical Car!

A Cartercar will answer every possible requirement you could make of a motor car. It is adapted for all kinds of driving—in all kinds of weather.

The control is by one lever—you have an unlimited number of speeds—and the Friction Transmission has eliminated all the usual troubles. Motor is cranked and lamps operated by electricity.

Your Cartercar will easily climb a 50 per cent grade—and will easily run through sand and mud which are impossible for any gear car. Then, too, this gearless transmission prevents all jerks and jars, which means the utmost comfort, and about twice the mileage from your tires. The Cartercar is simple, reliable and efficient—and these features you certainly want in your car. Write for catalog.

Bill Galloway Says: "I'll Give You 3 Months Power FREE"

I'll let you take any engine I've got and use it on your own farm for thirty, sixty

or even ninety days absolutely free. How's that for an offer? I'm going to give every man in the country who has been thinking of getting an engine a chance to try the Galloway absolutely, entirely at my risk. I want you to take a Galloway and let it work for you. Put it up against the hardest tests you can think of. Go around to your neighbors; ask them about their engines. Find out what their engines are doing, how much trouble they are giving and how much they cost.

Then go home and compare what they've told you with what you actually know about your Galloway. Take all the time you want to make up your mind. I won't hurry you. If a month isn't enough, let me know and I'll let you keep it a month or two longer. Then if you can't honestly say that you believe the Galloway is the best engine in the world at any price just send it right back to me. I'll pay the freight both ways. You won't be out a cent.

Keep the \$50 to \$300 You Save If you want to keep the Galloway I'll make you a price that not one manufacturer or dealer in America would even think of meeting. You keep the \$50 to \$300 that I save you right in your own pocket. I'll sell you a Galloway for just what it costs to make with only one small factory profit added. No wholesaler's, jobber's, dealer's, salesman's or any middleman's profit of any kind.

Free Service Bureau! The services of my staff of engine experts are always at your command free. They will tell you how to judge an engine, how to select the one best type for your purposes, how to handle and use it to your best advantage—in fact, they'll help you solve all your engine troubles without any cost or obligation whatever.

Get My 1913 Proposition The very best offer I have ever made is waiting for you. I want to tell you how you may get a genuine Galloway engine partly or entirely without cost. No canvassing -- no soliciting -- just the fairest and most liberal co-operative offer any body ever made.

FREE Engine Book Now don't wait—just send me a postal or letter now. I'll mail you my big Engine Book and full particulars of my wonderful 1913 Special Proposition FREE. Write me RIGHT NOW.

We carry Engines in stock at Chicago, Kansas City, Council Bluffs, Minneapolis and Winnipeg.

13.4 H. P. to 15 H. P.

The untimely death on May 30, 1911, of Mr. W. Z. Hutchinson, author of

Advanced Bee Culture

marked the passing of one of the most brilliant writers who have ever championed the cause of the honey-bee. . . . Perhaps no better tribute to this talented man could be given than that contained in the following paragraph from a testimonial article on Mr. Hutchinson's life by Prof. A. J. Cook, in *Gleanings*:

"No one could know him and his work without convincing proof that he stood in the very front ranks of our beekeeping fraternity. His quick intellect, coupled with his close attention to details, won for him, at the very start, phenomenal success as a queen-breeder. To this, apiculture owes its great good fortune in securing his life-long service in its development. He was temperamentally exact and methodical, transparently honest, and if I were to select one word to characterize our brother it would be genuineness. He was delightfully companionable, and always alert for any new idea or suggestion touching the interests of the work to which he was so entirely devoted. His quick apprehension, and terse clear-cut style as a writer, made him a most reliable exponent of all that was latest and best in the theory and practice of his beloved art."

Nearly 500 Subjects Pertinent to Modern Bee-keeping are Authoritatively Discussed

ADVANCED BEE CULTURE is a beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that the many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth. A volume whose appearance and unquestionable worth justify entitle it to a place in the library of every bee-keeper. No more important work on this fascinating subject has recently appeared.

Most fortunate for all beekeepers is the fact that Mr. Hutchinson's life was spared just beyond the point when he had completed his reading and correction of the editorial proofs of the new edition of **ADVANCED BEE CULTURE**. Only a few short days after an editorial by Mr. E. R. Root, editor of *Gleanings in Bee Culture*, who revised Mr. Hutchinson's book, had appeared, the call came, and this sterling, upright man, whom everybody loved, was taken home. Read what Mr. Root has to say of Mr. Hutchinson's book:

As a writer on bees Mr. Hutchinson has few equals. For clearness and accuracy of judgment he is second to none. His enthusiasm shines forth on every page. His selection of the new and useful from an extended discussion is intuitive. The last edition of "*Advanced Bee Culture*," as well as the new edition before, is made up of the best ideas of our best experts, properly classified and condensed by the master of the art of boiling down discussions. I do not hesitate to say that this is one of the most valuable books on bees that was ever put out; and while its title would indicate that it is designed only for the advanced beekeeper, yet I am sure that a large number of beginners in the business will find it exceedingly helpful and interesting, especially if they will take it up in connection with some other work like the "*A B C and X Y Z of Bee Culture*," or any text-book designed especially for the beginner class.

\$1.50 Buys a Two-dollar Value

ADVANCED BEE CULTURE costs \$1.00 per copy. *GLEANINGS IN BEE CULTURE* (semi-monthly)—known and read by beekeepers throughout the world—\$1.00 for an annual subscription. It is our pleasure, however, to offer this interesting and most useful combination—the book here described, and *GLEANINGS* one year, both for \$1.50. It is a value you will very seldom find—really it is a good \$2.00 worth for \$1.50.

Foreign postage, 60 cents extra; Canadian postage, 30 cents extra.

DO YOU LOVE SWEETS?

RALPH WALDO EMERSON DID

He said you can attain to royalty by loving sweets.

“He who knows what SWEETS are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man.”

“HOW to come at these?”

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*.

Want to know how?

Arcadia, Sound Beach, Conn.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, “a bee-man” and a naturalist.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION,
DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and en-

tirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, Feb. 22.

BLAKE-LEE CO.

INDIANAPOLIS.—Fancy white sells at 18 in ten-case lots; No. 1 white 1 ct. less; amber comb is in slow demand and at lower prices. Best extracted sells at 11 to 12 in five-gallon cans. There is an excessive demand for comb honey, but very little is now being offered by producers. Beeswax is in good demand, and producers are being paid 30 cts.

Indianapolis, Feb. 17.

WALTER S. POWDER.

CINCINNATI.—The demand for comb and extracted honey is light with a good supply. No. 1 white comb honey sells in large lots at \$3.60 per case of 24 sections. There is no demand for off grades. White extracted honey, in 60-pound cans, is selling from 9½ to 10; light amber in barrels, 7 to 7½; in 60-pound cans, 8 to 8½. Beeswax, fair demand, sells at \$33.00 per hundred. The above are our selling prices, not what we are paying.

Cincinnati, Feb. 22.

C. H. W. WEBER & CO.

KANSAS CITY.—The supply of both comb and extracted honey is large, the demand fair. We look for a better movement from now on. We quote No. 1 white comb, 24-section cases, \$3.10 to \$3.25; No. 2 ditto, \$3.00; No. 1 amber ditto, \$3.00; No. 2 ditto, \$2.50 to \$2.75; extracted white, per pound, 8 to 8½; extracted amber, 7 to 7½. Beeswax, 22 to 25.

An Active Season Just Ahead

A carload of perfectly new goods is just on hand from the factory. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for spring. Frames, and other inside fixtures too, should be put together now; and as this is a dull season with most of our customers, the work can be done now with no extra expense.

If you are wanting any special goods, orders ought to be in our hands within the next few days. Other cars will be coming from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

Our new catalog is out, and mailing nearly completed. If you are not on our mailing list, send us a postal-card request for this catalog.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line, and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder, the best in the market. Write for our catalog.

Honey reports continued from page 2.

CINCINNATI.—The market for honey has livened up considerably, and we are selling fancy double-decker comb honey at \$3.75 to \$4.00 a case; fancy extracted honey in 60-lb. cans at 9 to 10 cts. per lb., and amber extracted honey in barrels at from 6½ to 8 cts., according to the quantity and quality purchased. For choice bright yellow beeswax we are paying 30 delivered here; or if taken out in trade we allow 32.

Cincinnati, Feb. 20. THE FRED W. MUTH CO.

CHICAGO.—Comb honey has sold freely during this month, and stocks have been reduced; and if this demand keeps up during the coming month we are of the opinion that the yield of 1912 will be practically all consumed before that of 1913 is in evidence. We think the excellent quality of the honey has been the main factor in the large volume of sales, many retailers saying they have sold more honey this winter than they have for quite a long time, as people would come back for some more of the same kind they had before. Extracted is moving off steadily, and may clean up. Prices on comb have varied, and it is lower by 1 to 2 cts. per lb. than it was in September and October, and it is too late in the season now to expect any advance in price unless the crop is actually about exhausted. Beeswax remains steady at from 30 to 32, according to color and cleanliness.

Chicago, Feb. 17. R. A. BURNETT & CO.

ST. LOUIS.—Since ours of February 4, this market has ruled exceedingly dull on honey, especially the poor grades of extracted, which is quotable one-half cent lower. Comb honey is also neglected, and quotable at the former prevailing prices as follows: Fancy white comb honey, 16 to 17; No. 2, 15; light amber, 13 to 14; dark not wanted. Sales are now more or less made by the case, and we quote fancy white at \$3.65 to \$3.75; No. 2, \$3.40 to \$3.50; amber, \$2.75 to \$3.75, according to quality; dark, if sound and full weight, \$2.40 to \$2.50 per case. Broken, leaking, and honey not well filled, sells at much less. Extracted honey, Southern in barrels and half-barrels, sells at 6½ to 7 for light amber; dark, 6, in five-gallon cans; 7 for light amber, 6 to 6½ for dark. California, Utah, and Colorado honey is quotable at 9 to 9½ cents for very light amber or white, and 8½ for light amber in five-gallon cans. Beeswax is in good demand at 30 cents for prime; inferior and impure sells for less.

Can You HANDLE FORTY APIARIES?

READ THIS LETTER

Say, friend Tyrrell, you have besieged me with letters and cards from the request you made to your readers on page 479. Well, I never saw or heard of such a flood of mail. I never had any idea that you did have so many subscribers before, and, too, many of them write the best letters I believe I ever received. Well, it just did me good to look over them, and I wish you could have been here and gone over them with me.

And now I want to thank you for what you said, and I assure you that as soon as possible I will return the favor, not only to you but your many interesting readers, who have written so many good and cheering letters to me. I declare I don't know just how to express myself over the matter, but I must feel something as a great "big-hearted" fellow feels over a good old-fashioned hand-shaking at the close of a good meeting, when the good spirit is at its best ebb.

TOLEDO

"Griggs Saves You Freight"

By the way orders are coming in, it proves that the successful producers are not going to be caught napping. Every indication points to a good honey season which will soon be here.

We have anticipated the demand by getting in a larger stock of ROOT'S GOODS than we have ever carried; every thing new, and orders can be shipped promptly.

Start the season right by sending your orders to Toledo. Catalog free.

Beeswax wanted. Cash or in exchange for supplies

S. J. GRIGGS & CO. . . 26 North Erie Street . . TOLEDO, OHIO

"If Goods are Wanted Quick, Send to Pouder."

Many of my friends are calling my attention to the luxuriant sod of white clover which now covers our central States; and this feature, with the fact that bees went into winter quarters strong and with an abundance of wholesome stores, would indicate that this is going to be a piping good season for the wideawake bee-keeper. With these conditions in view I have, as usual, prepared myself with a very complete stock of the finest and latest equipments for those who are interested in the bee industry. Hives in all their different patterns and combinations; the Buckeye double-walled hive, Danzenbaker hives, regular dovetailed hives, and all equipped with supers of any design that may best suit your requirements. Sections, comb foundation, smokers, veils, and honey and wax extractors—everything required in the apiary; and the goods are here, so that you get prompt returns after placing your order here. To those who have not dealt here during the past twenty-four years I wish to explain that the goods handled are manufactured by The A. I. Root Co., and the kind that are in use by the most progressive everywhere, and my prices are the factory schedule, whether you require one hive or one hundred. If you've planned to place your order elsewhere I'd be grateful if you would submit a list of goods wanted for an estimate, and this would place you under no obligations whatever.

Many of the articles described in my catalog can be delivered by parcels post, and I am devoting special care to this line of business.

If you are in need of more finest honey for local demands I can supply you. Ask for my monthly quotations of the Indianapolis honey market.

I can use more beeswax on a cash or trade basis.

I should like to place my catalog in your hands.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

MARCH

The last month before the busy season for the beekeeper begins. Unless, with wise forethought, you have already anticipated your wants, you should place your order without delay. New goods by the carload are now coming in; and, though our service is at all times the best, we can serve you now with minimum delay and maximum satisfaction.

The new catalogs have arrived, and are being mailed. You will soon receive one if your name is on our trade list; otherwise you will be supplied on receipt of a postal-card request. Should you desire to order in the mean time, the 1912 catalog may be used. On cash orders in March, 1 per cent discount off catalog prices will be allowed.

Like the beekeeper whose letter follows, you will be pleased with PEIRCE SERVICE and ROOT QUALITY from OHIO'S BEE CENTER.

Mr. E. W. Peirce:—I want to thank you for prompt shipment of my order. It came in good shape.

Yours truly,
ALVA E. MOORE.

Marlinton, W. V., Feb. 22, 1913.

Mr. Moore also sends the name of a friend to whom he wishes the PEIRCE catalog sent. One will gladly be mailed to any beekeeping friend whose address you will be kind enough to give.

E. W. Peirce, Zanesville, O.
136 W. Main St.

How to Produce Extracted Honey

THIS is the title of a neatly printed, illustrated booklet, the second edition of which has just been published. Each operation in the process of extracted-honey production is explained in detail with photographic reproductions and drawings to make the text more plain. Beginning with the chapter on "Preparing Colonies for the Honey-flow," the booklet concludes with a description of "Packages for Extracted Honey." . . . Many helpful and valuable suggestions will be found within the 44 pages this booklet contains, and it is a pleasure to announce its addition to our Bee-keepers' 10-cent Library. Order by name or specify Number 25.

THE A. I. ROOT COMPANY

CHICAGO

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
Crystal City, Texas. C. W. Cox.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

Do You Want to Save

\$25.00 TO \$40.00

On Your New Buggy

Phelps says he'll save you \$25 to \$40 on a genuine Split Hickory. Is it worth a postal to find out? Is it worth a postal to see the 140 styles of vehicles and complete line of harness all shown in Phelps' new book. Is it worth a postal to learn the reasons why 167,000 other people bought

SPLIT HICKORY

vehicles? Phelps sells direct from his own factory—on 30 days' Free Road Test—2 years guarantee. You keep all the middle profits—you take no risk—everything is clearly photographed and accurately described and all guaranteed. Why not get Phelps' book so you can compare with others. Phelps pays postage if you write him a letter or postal. Just say "Send Book."

H. C. Phelps, Pres., The Ohio Carriage Mfg. Co.
Station 293 Columbus, Ohio

NO MORE RABBITS

If you want a cheap and safe method for keeping RABBITS and BORERS out of your orchard, paint your trees with "SULFOCID" the new concentrated sulphur compound. Easy to prepare and apply. One application lasts one year. "SULFOCID" solves the rabbit problem. Write today for booklet, "SULFOCID, Sure protection for rabbits and borers." Address B.G. Pratt Co., 50 Church St., N.Y.

Profit by Spraying

If You Grow Fruit or Make a Garden--

You should know all about spraying and fertilizing, about varieties and "inter-cropping." In the
garden you should plant the right thing at the right time in the right way. All these and many
more phases of fruit-growing, farming and gardening are treated in a thorough manner in

The Fruit Grower and Farmer—"The National Farm Magazine."

Each month's issue contains lots of dependable information for the man who
works the soil. Printed on good book paper and freely illustrated with pictures
from photographs. We think we publish the handsomest and most useful farm
paper in this country.

"Fruit Grower and Farmer" 3 Months and Dollar Guide Book **25c**

To acquaint you with our magazine we will send it 3 months for 25c. As a special
premium we will send a paper-bound copy of the Fruit Grower's Guide Book (cloth-bound
copies, \$1.00). A complete guide to fruit growing. Don't fail to secure this valuable book and
our paper for 3 months by sending your Quarter NOW. Sample copy free. Send names of friends.

THE FRUIT GROWER & FARMER, Box D, St. Joseph, Missouri

Double Your Profits

Plant trees and Bush Fruits in your chicken yards and reap double profits. Many of the most successful poultrymen do this and make more from the fruit than the poultry. The fruit is clear gain and the poultry thrive on the insects from the trees and bushes.

"Scarff's Fruit Catalog"

Offers special inducements. A reputation of over 25 years is back of every order. Our list is complete, fully describing the products of our 1100 acre Nursery and Seed Farms. Send for our free orchard tree catalog. Also describes our small fruit and farm seeds. Write to-day. It's free.

Send names and addresses of 5 Fruit Growers and get a fine currant bush free.

NEW YORK.—The market is practically bare of comb honey of all grades. Some few small odd lots are coming in as yet, and find ready sale at from 14 to 16 for white, and 11 to 13 for dark and amber, according to quality and style of package. The market for extracted honey has been very quiet during the past two months, and we do not see any indications for a better demand, as the supply is more than ample to meet the demand. California light-amber sage, which was reported to be of very short crop at the beginning of the season, and held at high figures, is being offered quite freely with no buyers. West Indian is arriving freely, with very little demand, and prices are declining right along the line. We quote California sage, light-amber, at 7½ to 8; California alfalfa, 6 to 6½, and West Indian at 73 to 75 cts. per gallon.

New York, Feb. 17. HILDRETH & SEGELKEN.

Classified Advertisements

Notices will be inserted in these classified columns at 25 cents per line. Advertisements intended for this department can not be less than two lines, and should not exceed five lines, and you must say you want your advertisement in the Classified Columns or we will not be responsible for errors.

HONEY AND WAX FOR SALE

FOR SALE.—Finest quality of extracted honey.
J. F. MOORE, Tiffin, Ohio.

No. 2 fall comb honey, \$2.50 per case of 24 sections. QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Finest extracted water-white alfalfa and amber alfalfa honey in 5, 10, and 60-lb. cans. Samples 10 cents. DADANT & SONS, Hamilton, Ill.

FOR SALE.—Finest quality clover and clover-bass-wood honey in 60-lb. cans. C. J. BALDRIDGE, Homestead Farm, Kendaia, N. Y.

We have just received a large shipment of extracted white-clover honey from a prominent producer. This honey has a very heavy body, and was well ripened before it was taken off the hives. We ship it, if preferred, in liquid form without extra charge, in new tin cans holding five gallons each, two cans in a case. Ask for free sample of lot 81, and our price. We have some fine fall amber extracted. An early fall flow caught a producer before he could get his white honey off, so his crop had to be graded as amber. Free sample and the price for asking. Lot No. 69. THE A. I. ROOT CO., Medina, O.

HONEY AND WAX WANTED

WANTED.—Comb, extracted honey, and beeswax. R. A. BURNETT & Co., 173 S. Water St., Chicago.

WANTED.—Comb and extracted honey and beeswax. Write us. HILDRETH & SEGELKEN, New York.

POSITION WANTED

Position wanted with beekeeper; have had some experience; age 21.
BEN OBEYARD, Rt. 2, Box 4, Flandreau, S. Da.

Situation wanted by an experienced beeman, 23 years of age, of good clean habits, doesn't use liquor or tobacco. Best of references furnished on application. Address AMOS HARKER, Cambridge, Iowa.

BEES AND QUEENS

Our queens will please you. Price \$1.00 each.
C. W. PHELPS & SON, Binghamton, N. Y.

FOR SALE.—50 to 300 colonies, eight-frame, good condition. E. F. ATWATER, Meridian, Idaho.

FOR SALE.—134 colonies Italian bees in chaff hives. M. ISBELL, 59 Mitchell St., Norwich, N. Y.

FOR SALE.—Three-banded Italian queens bred for honey, gentleness, and prolificness. One, \$1.00; 6 for \$5.00. WM. S. BARNETT, Barnett's, Va.

Do you wish to be treated right? Then send your orders for untested three-banded Italian queens to us—75 cts. each; \$4.25 for 6; \$8.00 per dozen. Safe arrival, and the Golden Rule for all our customers. THE GOLDEN RULE BEE CO., Riverside, Cal.

Golden Italian queens that produce golden bees, the brightest kind, gentle, and as good honey-gatherers as can be found. Each, \$1.00; six, \$5.00; tested, \$2.00; breeders, \$5.00 to \$10.00. J. B. BROCKWELL, Barnett's, Va.

No spring dwindling. Bees from the Land of Flowers. By express, safe arrival guaranteed. \$2.00 per half-pound. "A pound of bees in March is worth a swarm in June." EDWIN G. BALDWIN, DeLand, Fla.

Italian queens, untested, \$1.00; select tested, \$1.50. Bees by pound. Plans, "How to Introduce Queens," 15 cts.; "How to Increase," 15 cts.; or both, 25 cts. Descriptive list free. E. E. MOTT, Glenwood, Mich.

Golden and three-banded Italian, also Carniolan untested, 75 cts. each; 3 to 6, 70 cts.; 6 to 12, 65 cts. each. Tested, \$1.00; over 3, 90 cts. each. Bees per pound, \$1.25; nuclei, per frame, \$1.50. No disease here. Every thing guaranteed. C. B. BANKSTON, Buffalo, Leon Co., Tex.

There is a key to all business; and the key to successful honey production is "good" queens. We have them, and know how to raise them. Thirty-five years' experience. Three-banded Italians, 75 cts. each; \$4.25 for 6; \$8.00 per dozen. Safe arrival and satisfaction to everybody. We handle successfully the orders of the largest producers. THE RIALTO HONEY CO., Rialto, Cal.

FOR SALE.—Three-banded Italian queens and packages. Best honey-gatherers. Satisfaction or your money back. No disease. Ready about April 1. One untested queen, 75 cts.; 6 for \$4.25; 12 for \$8.00. After April 15, 1/2 lb. bees, \$1.00; 1 lb., \$1.50; good weight; f. o. b. here by express. Add price of queens if wanted. These are young bees, so will live longer than those you have wintered. W. D. ACHORD, Fitzpatrick, Bullock Co., Ala.

Try my famous strain of bees and queens, and be convinced that they are all I claim for them. For honey-gathering they have few equals, being bred strictly for business from the best strains that could be had, both queens and drones, as it is as important to have drones of the best as it is queens. Queens, Italian three-band, or Golden five-band, and Carniolans, bred in separate yards. Untested, 1, \$1.00; 6, \$5.00; 12, \$9.00; 25, \$17.50; 50, \$34.00; nuclei with the untested queen, 1 frame, \$2.50; 6 one-frame, \$15.00; two-frame, \$3.50; 6 two-frame, \$20.00; nuclei with tested queen, one-frame, \$3.00; 6, one-frame, \$17.40; two-frame, \$4.00; 6 two-frame, \$23.40. Satisfaction and safe arrival and prompt service guaranteed. D. E. BROTHERS, Attalla, Ala.

Summer Field Meeting. Date, location, and program to be announced.

September 13, Address, Burton N. Gates, Ph. D., State Inspector, Amherst, Mass.

October 11, Rights of Beekeepers, Arthur Monroe, Spencer, Mass.

November 8, Comb and Extracted Honey, A. Flansberg, Marlboro, Mass.

December 13, Value of Inspection, J. L. Byard, Inspector, Marlboro, Mass.

January 10, 1914, Annual Meeting. Election of officers. Reports of officers. General discussion of year's work.

AN OPPORTUNITY FOR BEEKEEPERS.

Beekeepers all over the country will be interested in an announcement of a beekeepers' day at the fifth annual farmers' week of the Massachusetts Agricultural College, on March 20. A program has been arranged which will prove attractive to any one interested in matters apicultural. The Hampshire, Hampden, and Franklin Beekeepers' Association will hold its annual meeting at 11:30, at which time W. M. Purrington, President of the Association, will speak on "Increase in the Apiary." At the same meeting E. F. Nichols will make his report as delegate to the National convention in Cincinnati. Lectures will also be given during the day by Irving W. Davis, Deputy Inspector of Apiaries; Dr. K. J. Franklin, Expert in Charge of Massachusetts cranberry investigations; Allen Latham, President of the Connecticut Beekeepers' Association; John L. Byard, Deputy Inspector of Apiaries, and Dr. B. N. Gates, of the Massachusetts Agricultural College. An opportunity will be given to visit and inspect the apiary building and the apicultural museum.

Beekeepers are invited to make demonstrations, and to display implements and products of the industry. If interested in this work, send for program to W. D. Hurd, Director of the Extension Service, Amherst, Mass.

FARMERS' WEEK, BEEKEEPERS' DAY.

The joint meeting of the Hampshire, Hampden, Franklin Beekeepers' Association Branch of the National Beekeepers' Association will be held March 20, 1913, in the Entomology Building, Massachusetts Agricultural College, Amherst, Mass.

This day is essentially for beekeepers. Come prepared to gain assistance in solving your problems, and to take part on the program. The entire beekeeping facilities at the College are at your disposal. Copies of this announcement will be sent to your friends upon request.

8:30 A. M., "Sac Brood, Pronounced a New Bee Disease in Relation to other Brood Diseases."—Irving W. Davis, Deputy Inspector of Apiaries.

9:30 A. M., "Value of Bees in Cranberry Culture as Proven by Experiments."—Dr. H. J. Franklin, Expert in Charge of Massachusetts cranberry investigations.

11:30 A. M., Annual meeting of the Hampshire, Hampden, Franklin Beekeepers' Association, President W. M. Purrington presiding.

"Increase in the Apiary."

Reports, regular business, election of officers, etc. "The National Convention, Cincinnati."—Report by Mr. E. M. Nichols, delegate.

1:30 P. M., Visit to the Apiary Building and Apicultural Museum of the Massachusetts Agricultural College.

2:30 P. M., "New Methods of Beekeepers; Wintering a Supply of Queens; Outyard Systems, etc."—Allen Latham, Norwichtown, Ct., President Connecticut Beekeepers' Association.

3:30 P. M., Addresses: "Bee-hunting as a Factor in Foul-brood Control."—John L. Byard, Deputy Inspector of Apiaries.

"More Bees and Better Beekeeping for Massachusetts."—Dr. B. N. Gates, Inspector of Apiaries.

4:30 P. M., the convention will be thrown open for addresses by prominent beekeepers and members.

5:30 P. M. (Draper Hall). Dinner for beekeepers. Private dining-room. Tickets 50 cts. Leave your name at the Extension Service Office.

Facilities are provided for the display of implements and products of the industry. Any beekeeper is invited to make demonstrations. It is advisable to announce your intentions to Dr. B. N. Gates, Amherst, Mass., in advance, in order that full provisions may be made for your convenience.

All interested in bees should attend.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

ALSIKE CLOVER SEED.

We are obliged to mark up the price of alsike clover from that recently offered, as we have sold out our stock and have to buy more on a higher market. If any of our readers have any surplus seed to offer we should be pleased to have offers with sample. At present we quote, bags included, peck, \$4.00; ½ bushel, \$7.50; bushel, \$14.50; two bushels, \$28.00.

MAPLE SUGAR AND SYRUP.

The disappointments of last season should not deter any one from placing an order for maple sugar or syrup this coming season. To-day, Feb. 20, the sugar-makers in this section begin tapping their trees, and there is every reason to look for a fair flow of sap this year. To those who are forehanded enough to anticipate their needs we will make the following prices subject to stock on hand at the time shipment is desired:

Single 1-gallon cans or six 1-gallon cans in a case, at \$1.25.

Two to ten cases of six 1-gallon cans, at \$1.15.

Larger quantities of 75 to 100 gallons, at \$1.10.

Pure rock-maple sugar in lots of 1 to 50 lbs., at 15 cts. per lb.

Pure rock-maple sugar in lots of 50 or more lbs. at 14 cts. per lb.

Orders will be filled in rotation, or as nearly as possible, depending on the size of the order. Our inspection will be much more rigid than formerly, so that you need have no fear of getting an off-grade of syrup. By the United States standard, 11 lbs. 2 1-5 oz. are required for a gallon of the fancy grade and the No. 1. For the second grade, 11 lbs. per gallon is required. Many of our readers will remember that Medina County secured the gold medal at the World's Columbian Exposition. Let your order come along as we shall undoubtedly have a fair supply by the time you read this notice.

SWEET-CLOVER SEED.

The demand for sweet-clover seed, especially the white, is brisk, and we have already sold more than half our stock of seed, and could have cleaned it all out, but have reserved some for our regular trade. If you are expecting to order, you had better get your order in while the supply lasts, as there is a very active demand. If any of our readers have any surplus to offer, let us hear from you, with sample.

We have a good supply of white, both annual and biennial. Most of the yellow offered by seedsmen is the annual variety, which is not to be compared with the biennial. The latter is very similar to the white; comes into bloom about two to three weeks earlier, and therefore prolongs the honey-flow that much. We quote:

	Price in lots of	1 lb.	10 lbs.	25	100
Melilotus alba, biennial...					
White sweet clover, hulled	24	\$2.20	\$5.25	\$20.00	
" " unhulled	17	1.50	3.50	13.00	
Melilotus officinalis, biennial					
Yellow sweet clover, hulled	28	2.60	6.25	24.00	
" " unhulled	21	1.90	4.50	17.00	
Annual yellow, hulled...	14	1.20	2.75	10.00	

Samples mailed free on request.

Kind Words from our Customers

The A. I. Root Co.:—

I never want to lose a single copy of GLEANINGS. I started last year with five stands of Italian bees: increased them to sixteen stands, and took off over a ton of alfalfa honey.

Oral, S. Da., Feb. 17.

CARMON FISHER.

The A. I. Root Co.:—

Honey crop this year, 5000 lbs. from 35 colonies, spring count, increasing to 60 colonies with plenty of stores for wintering; one-third comb honey and two-thirds extracted. Two colonies produced 250 lbs. each of extracted.

Stanton, N. J., Sept. 27.

L. K. COLE.

The A. I. Root Co.:—

May be you remember that you shipped me 3 lbs. bees and three queens on July 9 from Medina. I put them in my hives; and after a while I noted that one of the colonies was queenless, and I bought of you a select untested queen. I have fed my bees since July every day, and two of these nuclei are strong colonies, having drawn out 40 lbs. of honey, and they will winter well.

Pikeville, Ky., Sept. 22. GUSTAVE L. SCHMIDT.

THE LITTLE GIRL'S "SERMON," ETC.

Dear Bro. Root:—I have just read your article the second time in GLEANINGS for Dec. 15, and will say that it will be a great help to me. I always turn to your "Homes" department first when GLEANINGS is received, and I can not help believing that God has prospered you and your family for the great good that you are doing; and this little girl who wrote you this letter, I should love to take up in my arms and look in her angel face, as I am a great lover of children. This child will not see the fruits of this little seed that was dropped in fertile soil that will spread like a green bay tree until she reaches the kingdom of God; and you too, Bro. Root, some sweet day will see the fruits of your labors.

Gate City, Va., Dec. 30.

H. P. GROGAN.

ESTABLISHED 1891

TOEPPERWEIN & MAYFIELD CO.

(Incorporated)

Cor. Nolan and Cherry Sts.**San Antonio, Texas**

Factory and Warehouse.

To Our Friends and Patrons

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as all those engaged in the business.

Owing to the constantly increasing demand for comb foundation and beekeepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$100,000.00.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{3}{8}$ -inch frames, same as described in our catalog, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives.

Shortly before the death of Mr. Mayfield Mr. Udo Toepperwein sold his interest to Messrs. R. W. Hearne and B. L. Raborn, well-known business men of San Antonio. The retirement of the older members of the company will in no way change the policies of the new management except to increase materially the capital with the view of carrying a large stock of supplies. Mr. Morris, who has been practically the manager of the Toepperwein & Mayfield Co., continues with the new management.

It is the intention of the new management to increase materially the capital of the company, with the view of carrying a stock of supplies that will meet all the requirements of the trade. This will enable us to effect prompt shipments at all times, and thus avoid any delay and annoyance to customers on account of shortage of stock.

It will be our endeavor to accord our customers all possible courtesies and consideration in any matters that may arise. Mistakes will occur at times, as is only natural, and we only ask that they be brought to our attention so that they may be rectified. Our customers may be assured of the best quality of goods at as reasonable prices as are consistent with business methods.

Factory Prices for the Asking— on Genuine Witte Engines

**FREE
Engine
Book**

THE genuine Witte—conceded the best farm engine in America—now offered at actual wholesale prices. Yes, this is the engine that has lead the gasoline engine field for 25 years. Dealers have been getting the highest prices for the Witte. *Now* you can get one at actual factory price—what the dealer paid—and have the finest engine in your county.

Our Gas Well Saves You Many Dollars More

We do more than give you ordinary factory prices. We are the *only* manufacturers who have our own gas well. Power, testing, forge, foundry and heating fuels cost us nothing. *You* get the benefits. But you couldn't afford to own any other engine even if the Witte cost twice as much—because an average of 1 cent for every horse-power per hour *cuts gasoline bills in half*—pays for your engine in no time.

Every part *guaranteed 5 years—full rated horse power on minimum gasoline guaranteed too.* Built in all sizes from 1½ to 40 h. p., every one *tested to 10% over load.*

WRITE FOR 60 DAYS FREE TRIAL OFFER

and complete, direct, factory price proposition with catalog and special offer bulletin. We expose engine secrets in this bulletin that will startle you. Remember, it's your first chance at an engine of quality, standing and reputation at a small price. Mention size needed or work to be done. Write at once.

WITTE IRON WORKS CO.

1932 Oakland Ave.

"Professional" Poultrymen Don't Read This!

You will not be interested.

This advertisement is for

POULTRY AMATEURS

who have a few hens only—most likely only a back yard to keep them in—and who want a handbook designed for their particular needs.

To back-yard chicken owners we say "Do not waste time with the poultry books and booklets which are intended only for business poultrymen, as 90 per cent of them are. They are not meant for you, and will not give the facts you need. Get the only up-to-the-minute treatise for the non-professional owner of a few hens—which is our new booklet—

"Egg Secrets"

J. M. Foster wrote "Egg Secrets." He is the Egg King—the owner of the famous Rancocas Farm—and what he doesn't know about poultry isn't learnable. Mrs. Foster made an experiment with this back-yard egg factory, and she made a go of it. You ought to hear what she says about it. It's all in the book. Now, we say that you can do this very thing as sure as two and two make four.

Now, here's the fact:—The table scraps in an average family will furnish chickens with all their food except the grain—in return for these scraps and a little grain you will get eggs the year round—fine, clean, delicately flavored eggs whose history you know and which you can open without trepidation and eat with delight.

Then you needn't care whether eggs are thirty cents or eighty cents—you can have yours always, and *always fresh*, for practically nothing.

These are facts. Don't let any thing that you've heard, or some neighbor's experience sway you. Some people couldn't raise English sparrows. Bear in mind that there are many thousands of people who are running a back-yard egg factory successfully—who are eating their own fresh eggs daily while you are getting the cold-storage variety at exorbitant prices.

Stop Paying Outrageous Prices for unspeakable Eggs

You needn't have a lot of chickens—you needn't have a big yard. You needn't worry about the roosters crowing and disturbing the neighborhood—for they are strictly barred in this plan. You eat them before they are old enough to be a nuisance. Just a few hens will suffice for an average family—less for a small one—and besides the waste scraps of meat and vegetables from your table you need to feed them only a grain ration. It's the easiest sort of thing when you've read the book and know thoroughly the principles of the thing.

DO YOU LOVE SWEETS?

RALPH WALDO EMERSON DID

He said you can attain to royalty by loving sweets.

“He who knows what SWEETS . . . are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man.”

“HOW to come at these?”

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*.

Want to know how?

Send \$1.00 for a year's subscription to

The Guide to Nature
Arcadia, Sound Beach, Conn.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, “a bee-man” and a naturalist.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION,
DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the

wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, March 10.

BLAKE-LEE CO.

NEW YORK.—There are no new features to report as to the condition of the honey market. Trade is quiet, comb honey well exhausted, and prices ruling about the same as our last quotation.

New York, March 4. HILDRETH & SEGELKEN.

INDIANAPOLIS.—Fancy white sells at 18 in ten-case lots; No. 1 white 1 ct. less; amber comb is in slow demand and at lower prices. Best extracted sells at 11 to 12 in five-gallon cans. There is an excessive demand for comb honey, but very little is now being offered by producers. Beeswax is in good demand, and producers are being paid 30 cts.

Indianapolis, March 10. WALTER S. POWDER.

LIVERPOOL.—We quote retail sales of California honey at \$9.60 to \$17.40 per 100 lbs. Jamaican is slow trade at \$6.72 to \$7.68. Chilian is quiet. Of pile X, 30 barrels have been sold at \$8.64; pile 1, \$8.04 to \$8.16; pile 3, \$7.14; no pile, \$6.00. The market for Chilian beeswax is steady, 25 bags having been sold at \$34.32 to \$38.88 per 100 lbs.

Liverpool, Feb. 19.

TAYLOR & CO.

ST. LOUIS.—The honey market is very dull. There is barely any demand. Stocks, however, are not large and not burdensome. We quote fancy white comb honey by the case, \$3.75; No. 2, \$3.40 to \$3.50; amber, \$2.75 to \$3.25; dark, if sound, full weight, \$2.40 to \$2.50; Southern extracted in barrels, 6½ to 7; in five-gallon cans, 7 to 7½. California and other Western honey, at 9 to 9½ for white; light amber, 8 to 8½. Beeswax, 30 for prime.

St. Louis, March 5. R. HARTMANN PRODUCE CO.

An Active Season Just Ahead

A carload of perfectly new goods is just on hand from the factory. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for spring. Frames, and other inside fixtures too, should be put together now; and as this is a dull season with most of our customers, the work can be done now with no extra expense.

If you are wanting any special goods, orders ought to be in our hands within the next few days. Other cars will be coming from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

Our new catalog is out, and mailing completed. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line, and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder, the best in the market. Write for our catalog.

Honey reports continued from page 2.

DENVER.—We quote comb honey in a jobbing way at the following figures: No. 1, \$3.05; choice, \$2.90; No. 2, \$2.70. Extracted honey, white, 9; light amber, 8; strained, 6½ to 7. We pay 26 in cash and 28 in trade for clean yellow beeswax delivered here. THE COLORADO HONEY-PRODUCERS' ASSOCIATION.
Denver, March 10. FRANK RAUCHFUSS, Mgr.

ALBANY.—The honey market is very quiet here, there being no comb honey on the market. The crop was very small, and quality poor; principal complaint is candied honey, which is becoming a serious proposition. Extracted sells better than the dark and buckwheat grade, at 7½ to 8.
Albany, March 5. H. R. WRIGHT.

ZANESVILLE.—There is not much change in the honey situation since last report. Market is very quiet, but prices are about stationary. Best grades of white comb are quoted at 18 to 19 in one or two case lots; larger quantities at correspondingly lower prices. Best white extracted, 10 to 11. Producers receive for beeswax 28 cts. cash, 30 in trade. Wholesale market, 38 to 45, according to quantity and quality.
Zanesville, March 10. E. W. PEIRCE.

Kind Words from Our Customers.

The hives ordered from your firm came all right. Every thing came in good shape, just as ordered.
Carolina, R. I., Feb. 20. CYRUS E. KENYON.

Please insert my advertisement again for six times. The former one brought me a good number of inquiries. I am running my advertisement in five poultry journals, but have not had any inquiries from any of them. GLEANINGS has them all beat.
Berlin, Mich., Feb. 26. WALTER M. ADEMA.

I have been taking GLEANINGS, but have not had it since November. I am behind in my subscription, but I do not know how much. Please let me know how much it is, and I will remit, for I can not do without it. I am very much interested in bees. I have 87 hives at present, all in good condition. I did better last year than I ever did before. I got 194 lbs. from one hive. I averaged 133 lbs. per hive. I did not have 87 to start with. I have bought several since the season closed. I want 200 to start with this year.

I have read GLEANINGS with much interest. I enjoy reading Our Homes. We have no bee disease here in Tennessee.
Columbia, Tenn. J. H. DERRYBERRY.

BE THOU FAITHFUL UNTO DEATH, AND I WILL GIVE THEE A CROWN OF LIFE.

Mr. A. I. Root:—Often I have been moved to write a letter of encouragement and appreciation of your writings in GLEANINGS. Our Homes and temperance talks are read first. We find much good in them, as they seem so practicable and uplifting. When a small boy I remember when father would read to us at home out of religious papers, and how eager we were to listen when A. I. Root's writings were read.

Although now a little past the twenties, and in a home of our own, just launching out in life, as it were, we find Our Homes more helpful than ever. In my trade as electrician it helps me to be honest, trust in God, and gives me zeal and courage to stand for the right. We often get our meals at hotels in small towns, and there we see some of the evils of intemperance. Mr. Root, I believe God has still a task for you to perform; and that is, to unite the different temperance causes under one banner. Can we not, the Christian people of this land, with one united effort, and the help of God, overthrow and for ever abolish the rum traffic?

New Holland, Pa., Dec. 15. S. Z. MUSSELMAN.

A hearty amen, Bro. M., to your suggestion that all good people should unite (forgetting unimportant differences, and fight under one banner.

TOLEDO

"Griggs Saves You Freight"

By the way orders are coming in, it proves that the successful producers are not going to be caught napping. Every indication points to a good honey season which will soon be here.

We have anticipated the demand by getting in a larger stock of ROOT'S GOODS than we have ever carried; every thing new, and orders can be shipped promptly.

Start the season right by sending your orders to Toledo. Catalog free.

Beeswax wanted. Cash or in exchange for supplies

S. J. GRIGGS & CO. . . 26 North Erie Street . . TOLEDO, OHIO

"If Goods are wanted Quick, send to Pouder."

Bee Supplies Up to Date

EQUIPMENT. — Storeroom built expressly for the business; large concrete basement with just enough moisture to prevent breakage in sections and shrinkage in dovetailed corners of supers and hives. Electric lift brings up two tons of goods to first floor in thirty seconds for shipment. Does this appeal to you?

QUALITY. — Root goods at the factory schedule of prices, whether you require one hive or a hundred. This is the quality that I have handled for nearly a quarter of a century, and the kind that you can recommend to your visiting neighbors. I MIGHT have increased my profits for a SHORT TIME by handling other goods, but I would not have remained so long in the business.

GUARANTEE. — Many articles described in my catalog can now reach you by parcel post, and I assume all responsibility in safe arrival of goods. I have the very finest tight-seal glassware for putting up extracted honey, and I guarantee safe arrival—no breakage at purchaser's loss. I have waxed-paper honey-jars that are a decided success wherever they have been used.

MY CATALOG. — My catalog describes all of these things, and contains valuable information for those who are interested. I shall be pleased to show you how promptly I can get one into your hands if you will drop me a card.

BEESWAX. — Remember me when you have wax to offer, cash or trade, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

873 Massachusetts Avenue

MARCH

The last month before the busy season for the beekeeper begins. Unless, with wise forethought, you have already anticipated your wants, you should place your order without delay. New goods by the carload are now coming in; and, though our service is at all times the best, we can serve you now with minimum delay and maximum satisfaction.

The new catalogs have arrived, and are being mailed. You will soon receive one if your name is on our trade list; otherwise you will be supplied on receipt of a postal-card request. Should you desire to order in the mean time, the 1912 catalog may be used. On cash orders in March, 1 per cent discount off catalog prices will be allowed.

Like the beekeeper whose letter follows, you will be pleased with PEIRCE SERVICE and ROOT QUALITY from OHIO'S BEE CENTER.

Mr. E. W. Peirce:—I want to thank you for prompt shipment of my order. It came in good shape.

Yours truly,

ALVA E. MOORE.

Marlinton, W. V., Feb. 22, 1913.

Mr. Moore also sends the name of a friend to whom he wishes the PEIRCE catalog sent. One will gladly be mailed to any beekeeping friend whose address you will be kind enough to give.

E. W. Peirce, Zanesville, O.

10 - Advanced Bee Culture.....1 00

| Fifty Years Among the Bees. New edition. 1 00
By Dr. C. C. Miller. Dr. Miller is too well known among the bee-keeping fraternity to need any introduction. His book is charmingly written, and covers his experience in detail.

15 | Cook's Manual, cloth.....1 00

5 | Doolittle on Queen-rearing.....95

15 | Langstroth on the Honey Bee, Revised edition.....1 10

10 | Quinby's New Bee-keeping.....90

5 | British Bee-keeper's Guide-book, by Thomas William Cowan, England.....95

5 | The Honey-bee, by Thos. William Cowan.....95

10 | How to Keep Bees.....90

15 | Modern Bee-farm. By S. Simmins. New edition; cloth bound.....1 85

| Wax Craft, Cowan.....1 00

POPULAR BOOKS ON BEE CULTURE.

11 | The Bee People, Margaret W. Mosley.....1 40

11 | The Honey-makers, Margaret W. Mosley.....1 40

11 | Life of the Bee, Maeterlinck.....1 30

11 | The Swarm, Maeterlinck.....1 20

7 | The Bee-master of Warmlow, Edwards.....50

10 | Lore of the Honey-bee.....1 90

| Alexander's Writings on Practical Bee Culture.
By the late E. W. Alexander, who conducted the largest apary in the United States. A wonderfully interesting discussion of bee-keeping in its broadest phases. Any one can understand it: 35 chapters, 96 pages. Paper bound, 50 cts. postpaid.

| A Year's Work in an Out-apary.....

By G. M. Doolittle. Packed full of most valuable information ever given to bee-keepers. A practical and interesting book by a very successful apalrist. Sale has reached nearly 5000 copies; 60 pages, paper bound; 50 cts. postpaid.

| The Townsend Bee Book.....

By E. D. Townsend. Written by one of the most progressive, successful, and extensive bee-keepers in the U. S., this book has been in great demand from the day of its announcement. Tells how to make a start with bees, and will greatly benefit beginners and experienced bee-keepers; 90 pages, paper bound. 50 cts. postpaid.

| Bee-keeping by Twentieth-century Methods, by J. E. Hand.....50

The author shows not only how to control swarming, but how to treat foul brood without shaking, and discusses in a comprehensive way many other down-to-date apicultural problems and their solutions.

MISCELLANEOUS HAND-BOOKS.

5 | A B C of Carp Culture, by Geo. Finley.....25

7 | A B C of Potato Culture, Terry** New edition, revised & enlarged; paper, 50c; cloth, 75c, mail 85c. This is T. B. Terry's first and most masterly work. It has really made a revolution in potato-growing, and has been reprinted in several foreign languages. By getting the ground in proper condition to grow great crops of clover, and turning this under, Terry succeeded, not only in getting more potatoes, but even better ones, and in producing them at less expense also, than by any plan or system be-

Postage.]

[Price without postage

fore the time he began his experiments in 1885. The book has already passed through three editions of many thousands. It not only includes potato-growing in the United States, but in Bermuda, the Island of Jersey, and other warmer parts of the world where "new potatoes" are raised for the express purpose of getting the high prices in the cities during January, February, and March. The book also gives special attention to the different and best methods for preserving and keeping seed potatoes in the very best condition to plant in all these different localities.

5 | A B C of Strawberry Culture,** by T. B. Terry.. New edition, revised and enlarged; paper, 45c; cloth, 68c; by mail, 75c.

After Terry's potato-book had obtained such a kind reception from farmers, market-gardeners, and others, he was induced to give his plan of growing strawberries, as he did potatoes, by plowing under great crops of clover, and, like the potato-book, his writings gave a new impetus to strawberry-growing: in fact, some of his pupils declare that, aside from the picking, they can grow strawberries almost as cheaply per bushel as potatoes. By following Terry's teachings, thousands of people have not only been able to give their families but the whole wide world better strawberries, and more of them, than they ever saw before.

6 | Asparagus Culture.....40

6 | Alfalfa Culture.....40

| Barn Plans and Out-buildings*.....90

2 | Celery for Profit, by T. Greiner**.....25

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book.

10 | Fruit Harvesting, Storing, Marketing, etc.....75

It has been well said that it is an easier matter to grow stuff than to sell it at a proper price after it is grown; and many men fail, not because they are inexperienced in getting a crop, but because they do not know how to sell their crops to the best advantage. This is the first book of the kind we have had as an aid in selling. It not only tells all about picking, sorting, and packing, but gives all the best methods for storing for one or two days or a longer time. It also tells about evaporating and canning when there is a glut in the market. It discusses fruit packages and commission dealers, and even takes in cold storage. It is a new book of 250 pages, full of illustrations. Publisher's price, \$1.00.

| Farming with Green Manures, postpaid**.....90

This book was written several years ago; but since competent labor has got to be so expensive, and hard to get, many farmers are beginning to find they can turn under various green crops cheaper than to buy stable manure, and haul and spread it—cheaper, in fact, than they can buy fertilizers. This book mentions almost all plants used for plowing under, and gives the value compared with stable manure. Some of the claims seem extravagant, but we are at present getting good crops, and keeping up the fertility, by a similar treatment, on our ten-acre farm.

7 | Farm, Gardening, and Seed-growing**.....90

10 | Fuller's Grape Culturist**.....1 15

5 | Garden and Farm Topics, Henderson**.....60

12 | Gardening for Pleasure, Henderson**.....1 10

While "Gardening for Profit" is written with a view of making gardening PAY, it touches a good deal on the pleasure part, and "Gardening for Pleasure" takes up this matter of beautifying your homes and improving your grounds, without the special point in view of making money out of it. I think most of you will need this if you get "Gardening for Profit." This work has 246 pages and 134 illustrations. (Retail price \$2.00.)

12 | Gardening for Profit**.....1 10

This is a late revision of Peter Henderson's celebrated work. Nothing that has ever before been put in print has done so much toward making market-gardening a science and a fascinating industry. Peter Henderson stands at the head, without question, although we have many other books on these rural employments. If you can get but one book, let it be the above. It has 376 pages and 138 cuts. (Retail price \$2.00.)

8 | Gardening for Young and Old, Harris**.....90

This is Joseph Harris' best and happiest effort. Although it goes over the same ground occupied by Peter

Postage.]

[Price without postage

Henderson, it particularly emphasizes thorough cultivation of the soil in preparing your ground; and this matter of adapting it to young people as well as old is brought out in a most happy vein. If your children have any sort of fancy for gardening it will pay you to make them a present of this book. It has 187 pages and 46 engravings.

3 | Grasses and Clovers, with Notes on Forage Plants..... 20

This is by Henry A. Dreer, author of the book "Vegetables Under Glass" that has had such a large sale of late. This little book tells how six tons of grass has been grown to the acre, and gives much other valuable matter.

10 | Greenhouse Construction, by Prof. Taft**... 1 15

This book is of recent publication, and is as full and complete in regard to the building of all glass structures as is the next book in regard to their management. Any one who builds even a small structure for plant-growing under glass will save the value of the book by reading it carefully.

12 | Greenhouse Management, by Prof. Taft**..... 1 15

This book is a companion to Greenhouse Construction. It is clear up to the times, contains 400 pages and a great lot of beautiful half-tone engravings. A large part of it is devoted to growing vegetables under glass, especially Grand Rapids lettuce, as well as fruits and flowers. The publisher's price is \$1.50; but as we bought quite a lot of them we can make a special price as above.

5 | Gregory on Cabbages, paper*..... 20

5 | Gregory on Squashes, paper*..... 20

5 | Gregory on Onions, paper*..... 20

The above three books, by our friend Gregory, are all valuable. The book on squashes especially is good reading for almost anybody, whether they raise squashes or not. It strikes at the very foundation of success in almost any kind of business.

| Handbook for Lumbermen..... 05

5 | Home Pork-making; 125 pages, illustrated..... 40

I think it will pay well for everybody who keeps a pig to have this book. It tells all about the care of the pig, with lots of pictures describing cheap pens, appliances, all about butchering, the latest and most approved short cuts; all about making the pickle, barreling the meat, fixing a smoke-house (from the cheapest barrel up to the most approved arrangement); all about pig-troughs; how to keep them clean with little labor; recipes for cooking pork in every imaginable way, etc. Publisher's price is 50 cents, ours as above.

15 | How to Make the Garden Pay**..... 1 35

By T. Greiner. Those who are interested in hot-beds, cold-frames, cold green-houses, hothouses, or glass structures of any kind for the growth of plants, can not afford to be without the book. Publisher's price \$2.00.

10 | How to Keep Well and Live Long..... 90

The above book by T. B. Terry is, in my opinion, destined to relieve more pain, sickness, and death than any other book in the whole world that has ever come to my knowledge. This is pretty strong language, I admit; but since Mr. Terry commenced, years ago, to urge the importance of pure air, pure water, and a simple diet of good simple food in moderate quantities, the whole wide world, doctors included, seems to be gradually falling in with him. Of course, other good and wise men commenced a similar crusade for better health long before Terry did; but he seems to have a happy faculty of getting hold of people and keeping their attention. After you once start in with the book you will be pretty sure to read it to the end, and you will ever after be a better and a happier man or woman for having read it. We have a special low price for clubbing with GLEANINGS—that is, both for \$1.50. If you have already paid for GLEANINGS a year or more in advance you can have the book for 75 cents postpaid. Since it first came out, only a short time ago, we have sold nearly 1000 copies.

3 | Maple Sugar and the Sugar-bush**..... 25

5 | Manures; How to Make and How to Use Them; in paper covers..... 30

6 | The same in cloth covers..... 65

2 | Nut Cultivist, postpaid..... 1 25

3 | Onions for Profit**..... 40

Fully up to the times, and includes both the old onion culture and the new method. The book is fully illustrated, and written with all the enthusiasm and

Even if one is not particularly interested in the busi-

Postage.]

[Price without postage

ness, almost any person who picks up Greiner's books will like to read them through.

8 | Practical Floriculture, Henderson*..... 1 10

10 | Small-Fruit Cultivist, Fuller..... 75

2 | Experiments in Farming, By Waldo F. Brown. 08

This little book ought to be worth its cost for what is said on each of the four different subjects; and the chapter on cement floors may be worth many dollars to anybody who has to use cement for floors, walks, or anything else. In fact, if you follow the exceedingly plain directions you may save several dollars on one single job; and not only that, get a better cement floor than the average mason will make.

10 | Our Farming, by T. B. Terry**..... 75

| Same, paper cover, postpaid..... 50

In which he tells "how we have made a run-down farm bring both profit and pleasure."

If ordered by express or freight with other goods, 10c less.

10 | Talks on Manures*..... 1 35

By Joseph Harris. Written conversational style, which makes it very interesting reading. It covers the subject very completely; contains numerous analyses of manures and comparative tables. The use of technical language is avoided, which makes the book of greatest value to the practical farmer. A book of 366 pages, nicely bound in cloth.

10 | The Dollar Hen..... 90

The above book will be clubbed with GLEANINGS for one year at \$1.50; or if you have already subscribed a year or more in advance you can have the book postpaid for 75 cents.

My opinion is, that "The Dollar Hen" is not only one of the best books on poultry that we have at the present time, but it is worth nearly as much as a dozen other books. Perhaps this is extreme, but we have very few books that are strictly up-to-date, and still fewer that pitch right into the superstitions and humbugs now scattered all through our poultry books and journals.

5 | The New Rhubarb Culture**..... 40

Whenever apples are worth a dollar a bushel or more, winter-grown rhubarb should pay big. It does not require an expensive house nor costly appliances. Any sort of cellar where it will not freeze is all right for it; and the small amount of heat necessary to force the rhubarb costs very little. The book is nicely bound in cloth, full of illustrations, mostly photos from real work, 130 pages. Every market-gardener should have this book, for the lessons taught indirectly, in regard to forcing other crops besides rhubarb. Publisher's price 50c.

5 | Tile Drainage, by W. I. Chamberlain..... 35

Fully illustrated, containing every thing of importance clear up to the present date.

The single chapter on digging ditches, with the illustrations given by Prof. Chamberlain, should alone make the book worth what it costs, to every one who has occasion to lay ten rods or more of tile. There is as much science in digging as in doing almost any thing else; and by following the plan directed in the book, one man will often do as much as two men without this knowledge.

5 | Tomato Culture..... 35

In three parts. Part first.—By J. W. Day, of Crystal Springs, Miss., treats of tomato culture in the South, with some remarks by A. I. Root, adapting it to the North. Part second.—By D. Cummins, of Conneaut, O., treats of tomato culture especially for canning-factories. Part third.—By A. I. Root, treats of plant-growing for market, and high-pressure gardening in general.

3 | Winter Care of Horses and Cattle..... 25

This is friend Terry's second book in regard to farm matters; but it is so intimately connected with his potato-book that it reads almost like a sequel to it. If you have only a horse or a cow, I think it will pay you to invest in a book. It has 44 pages and 4 cuts.

8 | What to Do, and How to be Happy while Doing It..... 65

The above book, by A. I. Root, is a compilation of papers published in *Gleanings in Bee Culture*, in 1886, '7, and '8. It is intended to solve the problem of finding occupation for those scattered over our land out of employment. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit-culture, poultry-raising, etc. Illustrated, 188 pages, cloth.

8 | Same, paper covers..... 40

POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

ROOT'S BEEKEEPERS' SUPPLIES . . .

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequently letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation, this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1913.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

HONEY AND WAX FOR SALE

FOR SALE.—Finest quality of extracted honey.
J. F. MOORE, Tiffin, Ohio.

Blended white-clover honey in 60-lb. cans. Samples, 10 cts.
E. C. PIKE, St. Charles, Ill.

Finest extracted water-white alfalfa and amber alfalfa honey in 5, 10, and 60 lb. cans. Samples, 10 cents.
DADANT & SONS, Hamilton, Ill.

FOR SALE.—Finest quality clover and clover-bass-wood honey in 60-lb. cans. C. J. BALDRIDGE, Homestead Farm, Kendaia, N. Y.

We have just received a large shipment of extracted white-clover honey from a prominent producer. This honey has a very heavy body, and was well ripened before it was taken off the hives. We ship it, if preferred, in liquid form without extra charge, in new tin cans holding five gallons each, two cans in a case. Ask for free sample of lot 81, and our price. We have some fine fall amber extracted. An early fall flow caught a producer before he could get his white honey off, so his crop had to be graded as amber. Free sample and the price for asking. Lot No. 69.
THE A. I. ROOT CO., Medina, Ohio.

HONEY AND WAX WANTED

WANTED.—Comb, extracted honey, and beeswax.
R. A. BURNETT & CO., 173 So. Water St., Chicago.

Fine tested and select tested Italian queens of last season's rearing. Gentle three-banded stock that will increase your honey crop. Order now for spring delivery. Tested queens, \$2.00 each; selects, \$2.50. H. C. SHORT, Winchester, Ohio.

FOR SALE.—Moore's strain and golden Italian queens, untested, \$1.00; six, \$5.00; twelve, \$9.00. Carniolan, Banat, and Caucasian queens, select, \$1.25; six, \$6.00; twelve, \$10.00. Tested, any kind, \$1.50; six, \$8.00. Choice breeders, \$3.00. Circular free. W. H. RAILS, Orange, Cal.

Golden and three-banded Italian also Carniolan untested, 75 cts. each; 3 to 6, 70 cts.; 6 to 12, 65 cts. each. Tested, \$1.00; over 3, 90 cts. each. Bees per pound, \$1.25; nuclei, per frame, \$1.50. No disease here. Everything guaranteed. C. B. BANKSTON, Buffalo, Leon Co., Tex.

Bees in ½ and 1-lb. packages without queen, \$1.25 and \$2.00. These are young bees free from disease, and will greatly stimulate your weak colonies. We will make good any serious loss in transportation if the same is vouched for by your express agent. CHARLES C. SCHNEIDER, Dancy, Ala.

FOR SALE.—100 colonies of Italian and hybrid bees in standard ten-frame hives, \$5.00 per colony. J. F. RASCH, Marilla, N. Y.

Italian bees by the pound or in nuclei; ½ lb. bees, \$1.00; 1 lb. bees, \$1.75; 2 lbs., \$3.25; nuclei, \$1.25 per frame. Bees ready April 1. Write for prices on queens in small or large lots, also bees in carload lots. Carload lots ready May 1. ARVIN, Nusbaum Co., Meldrim, Ga.

There is a key to all business; and the key to successful honey production is "good" queens. We have them, and know how to raise them. Thirty-five years' experience. Three-banded Italians, 75 cts. each; \$4.25 for 6; \$8.00 per dozen. Safe arrival and satisfaction to everybody. We handle successfully the orders of the largest producers. THE RIALTO HONEY CO., Rialto, Cal.

FOR SALE.—Three-banded Italian queens and packages. Best honey-gatherers. Satisfaction or your money back. No disease. Ready about April 1. One untested queen, 75 cts.; 6 for \$4.25; 12 for \$8.00. After April 15, ½ lb. bees, \$1.00; 1 lb., \$1.50; good weight; f. o. b. here by express. Add price of queens if wanted. These are young bees, so will live longer than those you have wintered. W. D. ACHORD, Fitzpatrick, Bullock Co., Ala.

REAL ESTATE

Home of 10 acres, unlimited bee and poultry range—good market; healthiest locality in Texas; \$3000. If you mean business, apply to A. F. Z., Box 115, Llano, Texas.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

SWEET-CLOVER SEED.

The demand for sweet-clover seed, especially the white, is brisk, and we have already sold more than half our stock of seed, and could have cleaned it all out, but have reserved some for our regular trade. If you are expecting to order, you had better get your order in while the supply lasts, as there is a very active demand. If any of our readers have any surplus to offer, let us hear from you, with sample.

We have a good supply of white, both annual and biennial. Most of the yellow offered by seedsmen is the annual variety, which is not to be compared with the biennial. The latter is very similar to the white; comes into bloom about two or three weeks earlier, and therefore prolongs the honey-flow that much. We quote:

	Price in lots of	1 lb.	10 lbs	25	100
Mellilotus alba. biennial....					
White sweet clover, hulled	24	\$2.20	\$6.25	\$20.00	
" " unhulled	17	1.50	3.50	13.00	
Mellilotus officinalis. biennial					
Yellow sweet clover, hulled	28	2.60	6.25	24.00	
" " unhulled	21	1.90	4.50	17.00	
Annual yellow, hulled.....	14	1.20	2.75	10.00	

Samples mailed free on request.

MAPLE SUGAR AND SYRUP.

The disappointments of last season should not deter any one from placing an order for maple sugar or syrup this coming season. To-day, Feb. 20, the sugar-makers in this section begin tapping their trees, and there is every reason to look for a fair

flow of sap this year. To those who are forehanded enough to anticipate their needs we will make the following prices subject to stock on hand at the time shipment is desired:

Single 1-gallon cans or six-gallon cans in a case, at \$1.25.

Two to ten cases of six 1-gallon cans, at \$1.15.

Larger quantities of 75 to 100 gallons at \$1.10.

Pure rock-maple sugar in lots of 1 to 50 lbs., at 15 cts. per lb.

Pure rock-maple sugar in lots of 50 or more lbs. at 14 cts. per lb.

Orders will be filled in rotation or as nearly as possible, depending on the size of the order. Our inspection will be much more rigid than formerly, so that you need have no fear of getting an off-grade of syrup. By the United States standard, 11 lbs. 2 1-5 oz. are required for a gallon of the fancy grade and the No. 1. For the second grade, 11 lbs. per gallon is required. Many of our readers will remember that Medina County secured the gold medal at the World's Columbian Exposition. Let your order come along, as we shall undoubtedly have a fair supply by the time you read this notice.

Convention Notices

WORCESTER COUNTY BEEKEEPERS' ASSOCIATION.

Meetings held on the second Saturday of each month, except July and August, at 2 P. M., at Horticultural Hall, Worcester, Mass.

April 12, Building Up for Work, Arthur C. Miller, State Inspector, Providence, R. I.

May 10, Swarming and Requeening, Allan Laitham, Norwich, Ct.

June 14, Address, Wilfrid Wheeler, Concord, Mass., Secretary State Board of Agriculture.

Summer Field Meeting. Date, location, and program to be announced.

September 13, Address, Burton N. Gates, Ph. D., State Inspector, Amherst, Mass.

October 11, Rights of Beekeepers, Arthur Monroe, Spencer, Mass.

November 8, Comb and Extracted Honey, A. Flansberg, Marlboro, Mass.

December 13, Value of Inspection, J. L. Byard, Inspector, Marlboro, Mass.

January 10, 1914, Annual Meeting. Election of officers. Reports of officers. General discussion of year's work.

First annual convention of the Northern Michigan Branch National Beekeepers' Association will meet at Traverse City, Mich., Wednesday and Thursday, March 19 and 20, 1913. Headquarters and place of sessions at Hotel Whiting, where special rates have been given us.

OFFICERS.

President, C. F. Smith, Cheboygan, Mich.; Vice-president, Samuel D. Chapman, Mancelona, Mich.; Secretary-Treasurer, Ira D. Bartlett, East Jordan, Mich.

This is the first meeting of our association as a branch of the National Beekeepers' Association. We want it to be a success; and to make it so requires a goodly attendance of enthusiastic followers of our beloved pursuit.

These gatherings are but once each year, and I am sure you all can afford to be there. In fact, you can not well afford not to attend; so, come out, brother and sister beekeepers, and let us have a rousing meeting. Bring along some of the family or an interested friend, if possible.

You will note that we have some very liberal prizes offered for display of apianian products—first, second, and third prizes offered. I wish every one attending would bring along at least something. It makes a nice display, creates enthusiasm, and you are pretty sure of a prize of some sort if your article is at all worthy. Of course the best wins out; but you never know what you can do until you try. Don't forget the dates. IRA D. BARTLETT, Sec.

PROGRAM.

WEDNESDAY, 1 P. M.

Opening remarks, C. F. Smith.

Secretary-Treasurer's report.

Appointment of committees.

For the good of the association.

Election of officers.

Selling Honey by House-to-house Canvass, F. B. Cavanagh.

Co-operative Ideas for Michigan Apiarists, E. E. Coveyou.

Question-box.

Foul-brood report, E. B. Tyrrell, State Inspector of Apiaries.

Talk on Foul-brood legislation, E. M. Hunt.

Illustrated lecture on beekeeping and fruit-growing in Western Michigan, Western Michigan Development Bureau.

THURSDAY, 8:30.

National affairs; also soft candy for bee feed, E. D. Townsend.

Reminiscences of the supply business, A. G. Woodman.

Getting all the honey from the cappings, its disposition, and wax craft, Ira D. Bartlett.

How I disposed of my 1912 crop of comb honey, George Jaquays.

Question-box.

THURSDAY, 1 P. M.

Open session until train time.

PRIZES.

BEST 5 SECTIONS OF COMB HONEY.

1. \$4.00 in bee supplies, presented by M. H. Hunt & Son, Lansing.
2. \$2.00 in bee supplies, M. H. Hunt & Son.
3. Advanced bee-veil, A. G. Woodman Co., Grand Rapids.

BEST SINGLE SECTION OF COMB HONEY.

1. Dewey foundation-fastener, W. T. Falconer Mfg. Co., Falconer, N. Y.
2. *Beekeepers' Review*, National Beekeepers' Association.

BEST FIVE POUNDS EXTRACTED HONEY.

1. 1000 No. 1 sections, G. W. Lewis Co., Watertown, Wis.
2. 500 sections, A. G. Woodman Co., Grand Rapids, Mich.
3. *Beekeepers' Review*, National Beekeepers' Association.

BEST FIVE POUNDS CANDIED EXTRACTED HONEY.

1. Protection hive, A. G. Woodman Co., Grand Rapids.
2. 2 lbs. light brood foundation, W. T. Falconer Mfg. Co., Falconer, N. Y.
3. *American Bee Journal*, C. P. Dadant, Hamilton, Ill.

BEST, PUREST, AND CLEANEST SAMPLE FIVE-POUND BEESWAX.

1. 1 Hatch wax-press, A. I. Root Co., Medina, Ohio.
2. Light super foundation, W. T. Falconer Mfg. Co., Falconer, N. Y.
3. *American Bee Journal*, C. P. Dadant, Hamilton, Ill.

In judging the above, the color, body, flavor, and package will be considered. Do not put your name on the products entered, but enter it with the secretary, so that impartial judging may be assured.

I was surprised to see the number of answers I received to the small advertisement that I had in your journal of Feb. 1. I am receiving letters yet. Altamont, N. Y., March 1. PAUL QUAY.

I received the A B C and X Y Z of Bee Culture, and I am very much pleased with it. I think that, with careful reading and study, one can hardly fail in undertaking to keep bees. I am much pleased with the book; and if one did not wish to keep bees it is very interesting to study their ways. I also receive GLEANINGS every two weeks, and there is much in it one can learn. I am sure I appreciate your kindness very much in sending me the papers. Wolfe Island, Ont., Feb. 24. S. L. LANGON.

ESTABLISHED 1891

TOEPPERWEIN & MAYFIELD CO.

(Incorporated)

Cor. Nolan and Cherry Sts.

San Antonio, Texas

Factory and Warehouse.

To Our Friends and Patrons

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as those engaged in the business.

Owing to the constantly increasing demand for comb foundation and beekeepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$100,000.00.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{3}{8}$ -inch frames, same as described in our catalog, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives.

Shortly before the death of Mr. Mayfield Mr. Udo Toepperwein sold his interest to Messrs. R. W. Hearne and B. L. Raborn, well-known business men of San Antonio. The retirement of the older members of the company will in no way change the policies of the new management except to increase materially the capital with the view of carrying a large stock of supplies. Mr. Morris, who has been practically the manager of the Toepperwein & Mayfield Co., continues with the new management.

It is the intention of the new management to increase materially the capital of the company, with the view of carrying a stock of supplies that will meet all the requirements of the trade. This will enable us to effect prompt shipments at all times, and thus avoid any delay and annoyance to customers on account of shortage of stock.

It will be our endeavor to accord our customers all possible courtesies and consideration in any matters that may arise. Mistakes will occur at times, as is only natural, and we only ask that they be brought to our attention so that they may be rectified. Our customers may be assured of the best quality of goods at as reasonable prices as are consistent with business methods.

Don't Take a Shot Gun to Kill a Gape Worm!

You are not likely to make just that mistake in caring for your chicks, but you are making the same kind of a mistake if you start keeping a few chickens without

"Egg Secrets"

You are using for a simple job, a piece of machinery twenty times too big.

"EGG SECRETS" is a booklet written especially and exclusively for the owner of a few hens—most likely a beginner. It is at present the **ONLY** reliable and up-to-the-minute handbook for back-yard chicken raisers.

Don't waste your time on the hundreds of poultry books and papers that are for professional poultrymen only. They are not written for you. They will not tell you what you want.

J. M. Foster wrote "Egg Secrets." He is the Egg King—the owner of the famous Rancocas Farm—and what he doesn't know about poultry isn't learnable. Mrs. Foster made an experiment with this back-yard egg factory, and she made a go of it. You ought to hear what she says about it. It's all in the book. Now, we say that *you* can do this very thing as sure as two and two make four.

Now, here's the fact:—The table scraps in an average family will furnish chickens with all their food except the grain—in return for these scraps and a little grain you will get eggs the year round—fine, clean, delicately flavored eggs whose history you know and which you can open without trepidation, and eat with delight. *Then* you needn't care whether eggs are thirty cents or eighty cents—you can have yours always, and *always fresh*, for practically nothing.

These are facts. Don't let any thing that you've heard, or some neighbor's experience sway you. Some people couldn't raise English sparrows. Bear in mind that there are many thousands of people who *are* running back-yard egg factories successfully—who are eating their own fresh eggs daily while you are getting the cold-storage variety at exorbitant prices.

Stop Paying Outrageous Prices for unspeakable Eggs

You needn't have a lot of chickens—you needn't have a big yard. You needn't worry about the roosters crowing and disturbing the neighborhood—for they are strictly barred in this plan. You eat them before they are old enough to be a nuisance. Just a few hens will suffice for an average family—less for a small one—and besides the waste scraps of meat and vegetables from your table you need to feed them only a grain ration. It's the easiest sort of thing when you've read the book and know thoroughly the principles of the thing.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, "a bee-man" and a naturalist.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION,
DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—Fancy and No. 1 white comb honey, 16 to 17; fancy white extracted 12 to 13. Beeswax, 30.

Boston, March 18.

BLAKE-LEE CO.

DENVER.—We quote comb honey in a jobbing way at the following figures: No. 1, \$3.05; choice, \$2.90; No. 2, \$2.70, per case of 24 sections. Extracted honey, white, 9; light amber, 8; strained, 6½ to 7. We pay 28 cts. in cash and 30 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION.

Denver, March 18. FRANK RAUCHFUSS, Mgr.

CINCINNATI.—The demand for both extracted and comb honey is very good, and we are selling fancy double-decker comb honey at \$3.75 to \$4.00 a case; fancy extracted honey in 60-lb. cans, at 9 to 10; amber extracted in barrels, 6½ to 8, according to the quality and quantity purchased. For choice bright yellow beeswax we are paying from 28 to 30 cts. a lb., and if taken out in trade, 2 cts. per lb. more.

Cincinnati, March 20. THE FRED W. MUTH CO.

LIVERPOOL.—We quote set California honey at \$9.60 to \$10.20, and \$11.04 to \$12.00 for liquid. Retail sales are at the latter figure. Thirty kegs of Jamaican sold at \$6.72 to \$7.20. There have been no sales of Chilian on spot. Some 250 barrels of March and April shipment sold at \$6.24, O. I. F. continent. New-crop basis pile 3. Of beeswax, 30 bags of Chilian sold at \$35.88 per cwt. One ton, March and April shipment, sold at \$34.22 per cwt., C. I. F.

Liverpool, March 1.

An Active Season Just Ahead

A carload of perfectly new goods is just on hand from the factory, and another car will be on the way to us in a few days. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for spring. Frames, and other inside fixtures too, should be put together now.

If you are wanting any special goods, orders should be made at once. Other cars will be coming from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

The mailing of our new catalog is completed. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerable larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line, and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder—the best in the market. Write for our catalog.

Honey reports continued from page 2.

KANSAS CITY.—The supply of comb honey is very light, demand good. The supply of extracted is good, demand light. We quote No. 1 white comb, 24 sections, \$3.25 per case; No. 2 ditto, \$3.00; No. 1 amber comb, ditto, \$3.00; No. 2 ditto, \$2.75; extracted white, per lb., 8 to 8½; extracted amber, 7 to 7½; beeswax, 22 to 25.

C. C. CLEMONS PRODUCE CO.
Kansas City, Mo., March 19.

CHICAGO.—The supply of comb honey on this market is very light at this writing. All of the better grades have been marketed. Indeed, there is very little of any kind now offered. Prices range from 16 to 17 for the best grades, and the amber grades from 13 to 14, with the fancy light amber bringing 15. There remains quite a liberal supply of extracted honey, but it is being gradually reduced. Prices for the white clover and lindens range from 9 to 10; other white honeys 8 to 9, with the amber grades having a range of from 6 to 9, according to source, body, and flavor. There is a demand for sage honey, and what little is obtainable sells readily. Beeswax is steady at from 30 to 32, according to color and cleanliness.

Chicago, Ill., March 17. R. A. BURNETT & CO.

ST. LOUIS.—Since our last, of March 5, there has been barely any change noticeable in the honey market, and there is by no means any improvement in the prices or the demand. The quotations which we give to-day are more or less nominal. We quote fancy white comb honey at 16 to 17; No. 2 white, 15; light amber 13 to 14; by the case, fancy white brings \$3.65 to \$3.75; No. 2, \$3.40 to \$3.50; amber, \$2.75 to \$3.25, according to quality. Dark or broken honey is almost unsalable, no matter what concessions are made. Extracted Southern in barrels and half-barrels is quotable at 6½ to 7 for light amber; in 5-gallon cans at 7 to 7½; California, Utah, and Colorado honey, white, brings 9 to 9½; light amber, 8½, all in 5-gallon cans. Beeswax is in good demand at 30 cents for prime. Inferior and impure sells for less.

READ THIS LETTER

Say, friend Tyrrell, you have besieged me with letters and cards from the request you made to your readers on page 479. Well, I never saw or heard of such a flood of mail. I never had any idea that you did have so many subscribers before, and, too, many of them write the best letters I believe I ever received. Well, it just did me good to look over them, and I wish you could have been here and gone over them with me.

And now I want to thank you for what you said, and I assure you that as soon as possible I will return the favor, not only to you but your many interesting readers, who have written so many good and cheering letters to me. I declare I don't know just how to express myself over the matter, but I must feel something as a great "big-hearted" fellow feels over a good old-fashioned hand-shaking at the close of a good meeting, when the good spirit is at its best ebb.

"Griggs Saves Your Freight"

TOLEDO

"Griggs Saves Your Freight"

We have made arrangements with a large Southern breeder to furnish us with BEES and QUEENS, and orders will receive our prompt attention commencing April 1. First come, first served. Be first.

ORDER BEE-SUPPLIES NOW.—Large car of new goods on the way to fill the rush of early orders coming in. Send your orders now.

POULTRY FEEDS AT WHOLESALE.—Write for special prices of feed to be shipped with your order of bee-supplies. Cut out the middle man.

BEESWAX.—We can use five tons of good first-class wax. Send yours in now. Cash or in trade. Free catalog. Ask for one.

S. J. GRIGGS & CO. . . 26 North Erie Street . . TOLEDO, OHIO

"If Goods are wanted Quick, send to Pouder."

Bee Supplies Up to Date

EQUIPMENT.—Storeroom built expressly for the business; large concrete basement with just enough moisture to prevent breakage in sections and shrinkage in dovetailed corners of supers and hives. Electric lift brings up two tons of goods to first floor in thirty seconds for shipment. Does this appeal to you?

QUALITY.—Root goods at the factory schedule of prices, whether you require one hive or a hundred. This is the quality that I have handled for nearly a quarter of a century, and the kind that you can recommend to your visiting neighbors. I MIGHT have increased my profits for a SHORT TIME by handling other goods, but I would not have remained so long in the business.

GUARANTEE.—Many articles described in my catalog can now reach you by parcel post, and I assume all responsibility in safe arrival of goods. I have the very finest tight-seal glassware for putting up extracted honey, and I guarantee safe arrival—no breakage at purchaser's loss. I have waxed-paper honey-jars that are a decided success wherever they have been used.

MY CATALOG.—My catalog describes all of these things, and contains valuable information for those who are interested. I shall be pleased to show you how promptly I can get one into your hands if you will drop me a card.

BEESWAX.—Remember me when you have wax to offer, cash or trade, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.
873 Massachusetts Avenue

APRIL

The busy season for the beekeeper now begins. Unless, with wise forethought, you have already anticipated your wants, you should place your order without delay. New goods by the carload are now coming in; and, though our service is at all times the best, we can serve you now with minimum delay and maximum satisfaction.

The new catalogs are being mailed. You will soon receive one if your name is on our trade list; otherwise you will be supplied on receipt of a postal-card request. Should you desire to order in the mean time, the 1913 catalog may be used.

Like the beekeeper whose letter follows, you will be pleased with PEIRCE SERVICE and ROOT QUALITY from OHIO'S BEE CENTER.

Mr. E. W. Peirce:—I want to thank you for prompt shipment of my order. It came in good shape.

Yours truly,

ALVA E. MOORE.

Marlinton, W. V., Feb. 22, 1913.

Mr. Moore also sends the name of a friend to whom he wishes the PEIRCE catalog sent. One will gladly be mailed to any beekeeping friend whose address you will be kind enough to give.

How to Produce Extracted Honey

THIS is the title of a neatly printed, illustrated booklet, the second edition of which has just been published. Each operation in the process of extracted-honey production is explained in detail with photographic reproductions and drawings to make the text more plain. Beginning with the chapter on "Preparing Colonies for the Honey-flow," the booklet concludes with a description of "Packages for Extracted Honey." . . . Many helpful and valuable suggestions will be found within the 44 pages this booklet contains, and it is a pleasure to announce its addition to our Bee-keepers' 10-cent Library. Order by name or specify Number 25.

THE A. I. ROOT COMPANY

MEDINA, OHIO

CHICAGO

Nearly 500 Subjects Pertinent to Modern Bee-keeping are Authoritatively Discussed

ADVANCED BEE CULTURE is a beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that the many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth. A volume whose appearance and unquestionable worth justify its title to a place in the library of every beekeeper. No more important work on this fascinating subject has recently appeared.

The untimely death on May 30, 1911, of Mr. W. Z. Hutchinson, author of

Advanced Bee Culture

marked the passing of one of the most brilliant writers who have ever championed the cause of the honey-bee. . . . Perhaps no better tribute to this talented man could be given than that contained in the following paragraph from a testimonial article on Mr. Hutchinson's life by Prof. A. J. Cook, in *Gleanings*:

"No one could know him and his work without convincing proof that he stood in the very front ranks of our beekeeping fraternity. His quick intellect, coupled with his close attention to details, won for him, at the very start, phenomenal success as a queen-breeder. To this, apiculture owes its great good fortune in securing his life-long service in its development. He was temperamentally exact and methodical, transparently honest, and if I were to select one word to characterize our brother it would be genuineness. He was delightfully companionable, and always alert for any new idea or suggestion touching the interests of the work to which he was so entirely devoted. His quick apprehension, and terse clear-cut style as a writer, made him a most reliable exponent of all that was latest and best in the theory and practice of his beloved art."

Most fortunate for all beekeepers is the fact that Mr. Hutchinson's life was spared just beyond the point when he had completed his reading and correction of the editorial proofs of the new edition of *ADVANCED BEE CULTURE*. Only a few short days after an editorial by Mr. E. R. Root, editor of *Gleanings in Bee Culture*, who revised Mr. Hutchinson's book, had appeared, the call came, and this sterling, upright man, whom everybody loved, was taken home. Read what Mr. Root has to say of Mr. Hutchinson's book:

As a writer on bees Mr. Hutchinson has few equals. For clearness and accuracy of judgment he is second to none. His enthusiasm shines forth on every page. His selection of the new and useful from an extended discussion is intuitive. The last edition of "Advanced Bee Culture," as well as the new edition before, is made up of the best ideas of our best experts, properly classified and condensed by the master of the art of boiling down discussions. I do not hesitate to say that this is one of the most valuable books on bees that was ever put out; and while its title would indicate that it is designed only for the advanced beekeeper, yet I am sure that a large number of beginners in the business will find it exceedingly helpful and interesting, especially if they will take it up in connection with some other work like the "A B C and X Y Z of Bee Culture," or any text-book designed especially for the beginner class.

\$1.50 Buys a Two-dollar Value

ADVANCED BEE CULTURE costs \$1.00 per copy. *GLEANINGS IN BEE CULTURE* (semi-monthly)—known and read by beekeepers throughout the world—\$1.00 for an annual subscription. It is our pleasure, however, to offer this interesting and most useful combination—the book here described, and *GLEANINGS*, one year, both for \$1.50. It is a value you will very seldom find—really it is a good \$2.00 worth for \$1.50.

Foreign postage, 60 cents extra; Canadian postage, 30 cents extra.

Notice! Queens!

Ready to Mail April 1

Three-band Italians only, at the following prices: Untested, 90 cts. each; 12 for \$9.00; 100 for \$65.00. Tested, \$1.00 each; 12 for \$10.00. I have a few fine breeders at \$5.00 each.

On all queens purchased of me I guarantee them to give entire satisfaction. I use the best-known methods of rearing queens. My original stock was from Root's strain and other prominent breeders, and I keep adding imported blood to my apiaries.

I hold 92 first, 45 second, and 2 third prizes on my bees and queens and products of my apiaries. This speaks for itself. The best possible to obtain. My three-banders carried off first prize again at Dallas and Waco last fall.

I will have from 500 to 1000 mating-nuclei. I also sell nuclei. If interested write for circular and price list describing my bees and queens. It is free.

Galloway's Cow Book FREE!

Write today—right NOW for a copy of the most valuable money-making book on practical dairying that has ever been published. No theories—every single statement in this book is the result of actual experience by practical, successful men. Tells how to breed up a herd; select and care for the herd bull; how to feed; how to pick out a heavy milking cow and a heavy milking heifer; gives complete plans for modern dairy stables of all sizes and prices, besides a thousand and one other subjects, every one of which means dollars to you. This book is regularly priced at \$1.25. I'll send it FREE if you write me at once.

Get My Great Separator Offer, Too!
90 Days' Trial FREE!

Besides, I want to tell you about the great 90-day free trial offer I am making on the new Galloway Sanitary Separator—the most wonderful separator ever placed on the market! It's the latest and greatest production of my great factories—puts every other separator in the world twenty years behind the times. I don't ask you to take my word. Take the separator, use it three months—then, if you think you can get along without it, ship it back and I'll pay freight charges both ways.

Special 1913 Offer—If you write at once I'll tell you in a personal letter how you may get one of my new separators either partly or entirely free. No canvassing. No soliciting.

Send NOW! Don't wait—Send a letter or postal for this valuable free book and my great separator offer—TODAY!

PAINT WITHOUT OIL

**Remarkable Discovery that
Cuts Down the Cost of Paint
Seventy-five Per Cent.**

**A Free Trial Package is Mailed to Every
One Who Writes.**

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

HONEY AND WAX FOR SALE

Raspberry-clover honey in new 60-lb. cans at 9 cts. Same, 5 cts. J. D. HULL & BRO., Honesdale, Pa.

FOR SALE.—Finest quality clover and clover-bass-wood honey in 60-lb. cans. C. J. BALDRIDGE, Homestead Farm, Kendaia, N. Y.

We have just received a large shipment of extracted white-clover honey from a prominent producer. This honey has a very heavy body, and was well ripened before it was taken off the hives. We ship it, if preferred, in liquid form without extra charge, in new tin cans holding five gallons each, two cans in a case. Ask for free sample of lot 81, and our price. We have some fine fall amber extracted. An early fall flow caught a producer before he could get his white honey off, so his crop had to be graded as amber. Free sample and the price for asking. Lot No. 69. THE A. I. ROOT CO., Medina, Ohio.

Golden and three-banded Italian, also Carniolan untested, 75 cts. each; 3 to 6, 70 cts.; 6 to 12, 65 cts. each. Tested, \$1.00; over 3, 90 cts. each. Bees per pound, \$1.25; nuclei per frame, \$1.50. No disease here. Every thing guaranteed.

C. B. BANKSTON, Buffalo, Leon Co., Texas.

Bees in ½ and 1 lb. packages without queen, \$1.25 and \$2.00. These are young bees, free from disease, and will greatly stimulate your weak colonies. We will make good any serious loss in transportation if the same is vouched for by your express agent. CHARLES C. SCHNEIDER, Dancy, Ala.

Italian bees by the pound or in nuclei; ½ lb. bees, \$1.00; 1 lb. bees, \$1.75; 2 lbs., \$3.25; nuclei, \$1.25 per frame. Bees ready April 1. Write for prices on queens in small or large lots, also bees in carload lots. Carload lots ready May 1.

ARVIN, Nusbaum Co., Meldrim, Ga.

We will require all our 2000 colonies this spring. We offer the one-year-old queens, removed from these hives, at 40 cents each, any quantity, Italian stock delivered any time before June 1. Untested queens, this year's breeding, 60 cents each, delivery guaranteed. Book orders now.

SPENCER APIARIES Co., Nordhoff, Cal.

FOR SALE.—Swarms! Swarms! ½ lb. young bees with untested Italian queen, shipped as 1½ lbs., \$1.75; 1 lb. young bees with untested Italian queen, shipped as 2½ lbs., \$2.25. F. O. B. here; 6, 10 cents less each. This is the best way to increase and improve your bees. Safe arrival and satisfaction guaranteed. Circular free.

W. D. ACHORD, Fitzpatrick, Alabama.

Three-banded Italian queens and bees of superior red-clover strains. No other races in my apiaries; 15 years a breeder. After May 1, untested queen, \$1.00; tested, \$1.50; best breeder, \$5.00; two-frame nucleus, \$2.50. Full colony in ten-frame dovetailed or Danz. hive, \$9.00. Add price of queens wanted with nuclei and colonies. Better book orders now. Circular free. J. W. LEIB, S. Ohio Ave., Columbus, O.

FOR SALE.—Three-banded Italian queens and packages. Best honey-gatherers. Satisfaction or your money back. No disease. Ready about April 1. One untested queen, 75 cts.; 6 for \$4.25; 12 for \$8.00. After April 15, ½ lb. bees, \$1.00; 1 lb., \$1.50; good weight; f. o. b. here by express. Add price of queens if wanted. These are young bees, so will live longer than those you have wintered.

W. D. ACHORD, Fitzpatrick, Bullock Co., Ala.

Try my famous strain of bees and queens, and be convinced that they are all I claim for them. For honey-gathering they have few equals, being bred strictly for business from the best strains that could be had, both queens and drones, as it is as important to have drones of the best as it is queens. Queens, Italian three-band, or Golden five-band, and Carniolans, bred in separate yards. Untested, 1, \$1.00; 6, \$5.00; 12, \$9.00; 25, \$17.50; 50, \$34.00. Nuclei with the untested queen, one-frame, \$2.50; 6 one-frame, \$15.00; two-frame, \$3.50; 6 two-frame, \$20.00. Nuclei with tested queen, one-frame, \$3.00; 6 one-frame, \$17.40; two-frame, \$4.00; 6 two-frame, \$23.40. Satisfaction and safe arrival and prompt service guaranteed.

D. E. BROTHERS, Attalla, Ala.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

Convention Notices

WORCESTER COUNTY BEEKEEPERS' ASSOCIATION.

Meetings held on the second Saturday of each month, except July and August, at 2 P. M., at Horticultural Hall, Worcester, Mass.

April 12, Building Up for Work, Arthur C. Miller, State Inspector, Providence, R. I.

May 10, Swarming and Requeening, Allan Latham, Norwich, Ct.

June 14, Address, Wilfrid Wheeler, Concord, Mass., Secretary State Board of Agriculture.

Summer Field Meeting. Date, location, and program to be announced.

September 13, Address, Burton N. Gates, Ph. D., State Inspector, Amherst, Mass.

October 11, Rights of Beekeepers, Arthur Monroe, Spencer, Mass.

November 8, Comb and Extracted Honey, A. Flansberg, Marlboro, Mass.

December 13, Value of Inspection, J. L. Byard, Inspector, Marlboro, Mass.

January 10, 1914, Annual meeting. Election of officers. Reports of officers. General discussion of year's work.

Honey reports continued from page 2.

SCHENECTADY.—There is a limited demand for both comb and extracted honey; but there is very little to offer, especially of comb; and a fancy article would bring 15 to 16 cts. in a small way. Light extracted brings 8 to 9; amber, 7½ to 8. No dark to offer.

Schenectady, March 18. CHAS. MACCULLOCH.

INDIANAPOLIS.—Fancy white comb is selling at 18 cents per pound; No. 1 white, one cent less. Amber is in slow demand, and at lower prices. Supply of fancy white seems to be limited, and none is offered by producers. Best extracted sells at 11 to 12 in five-gallon cans. Beeswax is in good demand, and producers are being paid 30 cents per pound. Indianapolis, March 17. WALTER S. POWDER.

CINCINNATI.—The demand for comb and extracted honey is light, with a good supply. No. 1 white comb honey sells in large lots at \$3.60 per case of 24 sections. There is no demand for off grades. White extracted honey in 60-pounds cans is selling from 9½ to 10; light amber in barrels, 7 to 7½; in 60-pound cans, 8 to 8½. Beeswax is in fair demand; sells at \$33.00 per hundred. The above is our selling prices, not what we are paying.

Cincinnati, March 18. C. H. W. WEBER & Co.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

SECOND-HAND FIVE-GALLON CANS.

We have accumulated about a carload of good second-hand cans from which honey has been emptied and not washed, guaranteed to be without rust inside, and in good condition to use for amber honey for baking purposes. Price \$3.50 for ten cases of two cans each; \$7.50 for 25 cases; 100 cases or more at 25 cts. per case.

BUCKWHEAT SEED.

We have a good stock of buckwheat for seed, both Japanese and silverhull, which we offer while it lasts at 40 cts. a peck; 75 cts. per half-bushel; \$1.25 per bushel; \$2.25 for two bushels, bags included. Toward seedling time, a few weeks later, this price will doubtless be advanced. If you plan to sow this year you had better lay in a supply of seed when it may be had.

BEESEWAX WANTED.

Our large stock of beeswax is greatly reduced by recent orders for comb foundation, and we are in need of a further supply. Until further notice we will pay 30 cts. cash or \$2 in trade, delivered here, for good average wax. This is the best price we have offered in print for several years, and may not last long. If you have any wax to sell, get it off to us without delay, and be sure to mark the shipment so we can identify it when it arrives. Write, giving gross, tare, and net weight shipped.

MAPLE SUGAR AND SYRUP.

The weather this spring has been again unfavorable, and this makes the third poor syrup year. Some producers estimate the crop will be about 30 to 65 per cent of an average year. To-day, March 24, the season is about over, and we hope to ship orders from date at the following prices:

Single 1-gallon cans, or a case of 6 cans, \$1.25 per gal.
Two to ten cases of six one-gallon cans, 1.20 ..
Larger quantities, 1.15 ..
One to 100 lbs. maple sugar, .16 per lb.
100 lbs. and upward, .15 ..

BEEHIVES OF CALIFORNIA REDWOOD.

We have made up part of a carload of California redwood into hives, both eight-frame and ten-frame, with supers and covers of the same wood. We shall be pleased to furnish them to any who would like to try them in comparison with pine. In Arizona and parts of California they prefer hives made of redwood, claiming they will not shrink or change their shape as much as pine. Manufacturers of incubators are using redwood almost entirely, finding it most suitable for the purpose. An incubator is a very trying place for lumber of any kind; and if it works well there it ought to be excellent for hives. So far they are in stock at Medina only. If samples find favor we may use more of this kind of lumber in hives. It is as light in weight as pine, but red in color.

SWEET-CLOVER SEED.

As we go to press we are oversold on white-sweet-clover seed. Our stock, both hulled and unhulled, is entirely exhausted. We have upward of a ton of hulled seed engaged in California; but it may not arrive here for several weeks. We may also find some other lots. Until we do we can not name a price, and will accept orders subject to supply available and the best price we are able to make. Seed-houses are asking much higher prices than we have been selling at. We will try to supply some at no higher price than we are quoting on the yellow biennial. We still have a good supply of this, as well as of the annual yellow.

This blooms one to three weeks earlier than the white, and by many is considered fully as good, if not better. It is not as well known or as widely distributed as the white.

	1 lb.	10 lbs.	25 lbs.	100 lbs.
Hulled yellow biennial, .28	\$2.60	\$6.25	\$24.00	
Unhulled, .21	1.90	4.50	17.00	
Hulled yellow annual, .14	1.20	2.75	10.00

ESTABLISHED 1891

TOEPPERWEIN & MAYFIELD CO.

(Incorporated)

Cor. Nolan and Cherry Sts.**San Antonio, Texas**

Factory and Warehouse.

To Our Friends and Patrons

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as those engaged in the business.

Owing to the constantly increasing demand for comb foundation and beekeepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$100,000.00.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{3}{8}$ -inch frames, same as described in our catalog, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives.

Shortly before the death of Mr. Mayfield Mr. Udo Toepperwein sold his interest to Messrs. R. W. Hearne and B. L. Raborn, well-known business men of San Antonio. The retirement of the older members of the company will in no way change the policies of the new management except to increase materially the capital with the view of carrying a large stock of supplies. Mr. Morris, who has been practically the manager of the Toepperwein & Mayfield Co., continues with the new management.

It is the intention of the new management to increase materially the capital of the company, with the view of carrying a stock of supplies that will meet all the requirements of the trade. This will enable us to effect prompt shipments at all times, and thus avoid any delay and annoyance to customers on account of shortage of stock.

It will be our endeavor to accord our customers all possible courtesies and consideration in any matters that may arise. Mistakes will occur at times, as is only natural, and we only ask that they be brought to our attention so that they may be rectified. Our customers may be assured of the best quality of goods at as reasonable prices as are consistent with business methods.

Our new catalog on request. Address

Gleanings in Bee Culture

. . . . AND THE

Weekly Inter Ocean and Farmer

Both a Full . .
Year for Only **\$1.25**

**All the News of the World and Home
Only 25 cts. More than the Price of Gleanings Alone**

The Weekly INTER OCEAN and FARMER

is truly a Great Weekly Paper, and is the only Weekly published by a Chicago Daily. Thus the WEEKLY INTER OCEAN AND FARMER'S special advantages in securing and printing important world's news are clearly obvious.

The World's Greatest Live Stock, Grain, and Produce Markets are in Chicago, and are most fully and accurately reported by THE WEEKLY INTER OCEAN AND FARMER.

When you add the special features of its own various attractive departments, such as Home Health Club, Lost and Found Poems, Chess and Checkers; Field, Farm, Garden, and Veterinary Topics; Complications, Modes and Pattern Department, Sunday School Lessons, etc., you will realize and appreciate the big money's worth given in each issue of **The Weekly Inter Ocean and Farmer** at its subscription price of \$1.00.

**These Features, together with a Special Magazine Department
Make up the Leading Farm, Home, and News Paper of the West**

OUR OFFER	{	The Price of the Weekly Inter Ocean and Farmer is \$1.00 a Yr.
		The Price of Gleanings in Bee Culture is 1.00 a Yr.
		The Two Papers each one year will cost only . . 1.25 a Yr.

N. B.—This special arrangement with The Weekly Inter Ocean and Farmer is for a limited time only. Subscribers to the Weekly Inter Ocean and Farmer are assured that no papers will be sent after their subscriptions expire unless their subscriptions are renewed by cash payments.

ROOT'S BEEKEEPERS' SUPPLIES . . .

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequently letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation, this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1913.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

OUR RATE for the Combination, \$1.50

Send Your Order for the Combination to

The A. I. Root Company, Medina, Ohio

"falcon" Hives, Supers, Sections Frames, Foundation, etc. Everything for the Beekeeper.

How's your supply of supers? Don't let swarming season catch you without a supply. If you haven't enough for the coming season it would be a good plan to place your order now. It isn't very pleasant to get caught in the rush without supers; and every day that you lose means dollars in honey lost.

Eight-frame in the Flat in lots of

	1	5	10
No. 1 super,	75c	\$3.50	\$6.80
No. 2 super,	55c	2.50	4.80

The "Falcon" No. 1 super holds slotted section-holders, wood separators slotted both edges, follower, springs, 4¼x4¼x1½ beeway sections, inch-wide foundation starters, and nails. The No. 2 is the same as No. 1 without sections and foundation starters.

Ten-frame in the Flat in Lots of

	1	5	10
No. 1 super,	80c	\$3.75	\$7.30
No. 2 super,	60c	2.75	5.30

The price of supers holding 4x5x1½, 4¼x1½, 3½x5x1½ plain sections is the same as the 4¼x1½ style. When ordering, specify style of sections.

DO YOU LOVE SWEETS?

RALPH WALDO EMERSON DID

He said you can attain to royalty by loving sweets.

"He who knows what SWEETS . . . are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man."

"HOW to come at these?"

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*.

Want to know how?

Send \$1.00 for a year's subscription to

**The Guide to Nature
Arcadia, Sound Beach, Conn.**

It is edited by Edward F. Bigelow, a sweets extractor—in other words, "a bee-man" and a naturalist.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from tractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well combed by all other means except the centrifugal strained. It may be put up in cans that previously have contained honey.

NEW YORK.—We have nothing new to report. There is very little comb honey around, and we do not expect any shipments from now on of any consequence. Prices rule as formerly. We may say the same as to extracted. Our market is quiet on all grades. There is no change in prices. Beeswax is steady at 31.

New York, April 5. HILDETH & SEGELKEN.

SCHENECTADY.—We have to report a very quiet market; but little stock on hand; bad roads and high water interfering with what might be sent forward. One producer writes us that he was obliged to pay five dollars to have nine cases of extracted honey drawn to a railroad station, a distance of only six miles, on account of the almost impassable condition of highways. No change in prices.

Schenectady, April 5. CHAS. MACCULLOCK.

ST. LOUIS.—Since our last, of March 19, the honey market is precisely the same, and we repeat the quotations as follows: Fancy white comb honey, 16 to 17; No. 2 white, 15; light amber, 13 to 14. By the case, fancy white sells at \$3.65 to \$3.75; No. 2, \$3.40 to \$3.50; amber, \$2.75 to \$3.25, according to quality. Dark or broken honey is almost unsalable, no matter what concessions are made. Extracted Southern in barrels and half-barrels is quotable at 6½ to 7 for light amber; in five-gallon cans, 7 to 7½; California, Utah, and Colorado honey, white, 9 to 9½; light amber, 8½, all in five-gallon cans. Beeswax is in good demand at 31 for prime. Inferior and impure sells for less.

St. Louis, April 5. R. HARTMANN PRODUCE CO.

30 DISTRIBUTING HOUSES FOR LEWIS BEEWARE

An Active Season Just Ahead

A carload of perfectly new goods is just on hand from the factory, and another car will be on the way to us in a few days. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for spring. Frames, and other inside fixtures too, should be put together now.

If you are wanting any special goods, orders should be made at once. Other cars will be coming from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

The mailing of our new catalog is completed. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerable larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line, and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder—the best in the market. Write for our catalog.

Honey reports continued from page 2.

INDIANAPOLIS.—Fancy white comb is selling at 18 cents per pound; No. 1 white, one cent less. Amber is in slow demand, and at lower prices. Supply of fancy white seems to be limited, and none is offered by producers. Best extracted sells at 11 to 12 in five-gallon cans. Beeswax is in good demand, and producers are being paid 30 cents per pound. Indianapolis, April 9. WALTER S. POWDER.

DENVER.—We quote comb honey in a jobbing way at the following figures: No. 1, \$3.05; choice, \$2.90; No. 2, \$2.70, per case of 24 sections. Extracted honey, white, 9; light amber, 8; strained, 6½ to 7. We pay 28 cts. in cash, and 30 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION.
Denver, April 8. FRANK RAUCHFUSS, Mgr.

ZANESVILLE.—Flood conditions in Ohio and bordering States have paralyzed business in general, the honey business included; consequently quotations are of little meaning or value. Producers still have a little of the old crop to offer. While comb is pretty well cleaned up, there seems to be an oversupply of extracted. Nominally, best grades of white comb should bring 18 to 19; white extracted, 10 to 11. For beeswax, producers are offered 30 cts. in cash, 32 in trade.

Zanesville, April 4. EDMUND W. PEIRCE.

BUFFALO.—Demand for both extracted and comb honey is very slow in this market; very little in the hands of jobbers. I think the price is too high to make a free movement. I think the price is too high all be sold before the new crop is ready for market. We quote fancy white comb honey, 17 to 18; choice ditto, 16 to 17; No. 1 ditto, 15 to 16; No. 2 ditto, 13 to 14; dark ditto, 12 to 15; No. 1 white extracted, 9 to 10; amber ditto, 6 to 7; dark ditto, 8 to 9; beeswax, 27 to 28.

Buffalo, April 5. W. C. TOWNSEND.

THE BEEWARE BRAND MEANS SUCCESS INSURANCE

Send for Annual Catalog which will tell you who is your nearest Distributer. G. B. Lewis Company, Watertown, Wis.

"Griggs Saves Your Freight" **TOLEDO** "Griggs Saves Your Freight"

We have made arrangements with a large Southern breeder to furnish us with BEES and QUEENS, and orders will receive our prompt attention commencing April 1. First come, first served. Be first.

ORDER BEE-SUPPLIES NOW.—Large car of new goods on the way to fill the rush of early orders coming in. Send your orders now.

POULTRY FEEDS AT WHOLESALE.—Write for special prices of feed to be shipped with your order of bee-supplies. Cut out the middle man.

BEE-SWAX.—We can use five tons of good first-class wax. Send yours in now. Cash or in trade. Free catalog. Ask for one.

S. J. GRIGGS & CO. . . 26 North Erle Street . . TOLEDO, OHIO

"If Goods are wanted Quick, send to Pouder."

Bee Supplies Up to Date

EQUIPMENT.—Storeroom built expressly for the business; large concrete basement with just enough moisture to prevent breakage in sections and shrinkage in dovetailed corners of supers and hives. Electric lift brings up two tons of goods to first floor in thirty seconds for shipment. Does this appeal to you?

QUALITY.—Root goods at the factory schedule of prices, whether you require one hive or a hundred. This is the quality that I have handled for nearly a quarter of a century, and the kind that you can recommend to your visiting neighbors. I MIGHT have increased my profits for a SHORT TIME by handling other goods, but I would not have remained so long in the business.

GUARANTEE.—Many articles described in my catalog can now reach you by parcel post, and I assume all responsibility in safe arrival of goods. I have the very finest tight-seal glassware for putting up extracted honey, and I guarantee safe arrival—no breakage at purchaser's loss. I have waxed-paper honey-jars that are a decided success wherever they have been used.

MY CATALOG.—My catalog describes all of these things, and contains valuable information for those who are interested. I shall be pleased to show you how promptly I can get one into your hands if you will drop me a card.

BEE SWAX.—Remember me when you have wax to offer, cash or trade, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.
873 Massachusetts Avenue

Flooded Stock!

Owing to the recent floods in Zanesville my stock of bee supplies has been somewhat damaged by water, and I am obliged to move the same at once. As the water stood on the stock but a comparatively short time, the condition of the material is not at all bad; but I am prepared, nevertheless, to offer some very decided bargains in order to move it all this month, and make room for new stock already ordered from the factory. I will have ready for mailing within a few days a list of damaged stock with its condition fully described, and the discounts I can make on the same. Write for this list at once if you want to buy some otherwise good stock at reduced prices. You will save money by so doing, and help me at a time when I need your help.

As I had a carload of goods ordered before the flood, and as the factory is helping me out with direct shipments, all orders are being cared for promptly, and being filled with standard undamaged stock without delay.

Damaged Stock at Reduced Prices
Regular Stock at Catalog Prices

136 W. Main St.

A KIND WORD FOR THE HOME PAPERS.
Mr. A. I. Root.—The richest thing in GLEANINGS for Nov. 15 was the wail of C. P. Kimball, on page 9. He wants you to stick to bees, more bees, all bees, nothing but bees. I infer he doesn't like something in the Home Department. Oh dear! Why couldn't he read GLEANINGS as far as Our Homes, and then stop? My opinion is, he couldn't stop then. He just had to read Our Homes, either because he liked it or because he didn't like it. But there was no need of his coming back at you for trying to make this world better. Now, Mr. Root, I will give you fair warning that, if you ever drop Our Homes, I will drop GLEANINGS. I seldom read the bee part of your paper, but always read every thing else. I am not a church member, and don't go to church; but I think if your advice were followed, and the reforms you advocate were adopted, this would be quite a heavenly world.

Cleveland's "Golden-rule" police department is a good one too. The idea of dumping their undesirable citizens into their neighboring cities and towns! Their conception of the "golden rule" must be badly "frazzled."

Boca Raton, Fla., Nov. 26. F. H. CHESEBRO.

PHLEPS' FACTORIES NOT TOUCHED BY BIG FLOOD.
One of the biggest and oldest industries in the State of Ohio, The Ohio Carriage Mfg. Co., makers of the famous Split Hickory vehicles, escaped all damage from the flood. The general havoc created in some parts of Columbus has rapidly given way to the regular order. The Ohio Carriage Factories and others happily located were entirely out of reach, and far removed from the troubled side of the city. Their business is progressing without interruption, and the railroads are taking prompt care of all shipments.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, checking the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE. By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 THE BEEKEEPER AND FRUIT-GROWER. A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 CATALOG OF BEEKEEPERS' SUPPLIES. Our complete catalog will be mailed free to any address on request.
- 7 SPRING MANAGEMENT OF BEES. A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oftentimes perplexing matter. Price 10 cts.
- 8 HABITS OF THE HONEYBEE. By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 HOW TO KEEP BEES. A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 THE A B C OF BEE CULTURE. A complete encyclopedia of bees, of 576 pages, fully illustrated, \$2.00 postpaid; half leather, \$2.75.
- 11 GLEANINGS IN BEE CULTURE. A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 BACK-YARD BEEKEEPING. Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 THE BUCKEYE BEEHIVE, or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 ADVANCED BEE CULTURE. A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

BEEKEEPERS

Your busy season is close at hand. Get wise, and place your orders with the supply dealer who will save you money and serve you best with Root's quality sections, frames, foundation, smokers, extractors, etc. I can serve you now without delay. My 1913 catalog tells you all about these things; besides, it contains a lot of information to those interested in bees. Special attention given to the breeding of three-banded Italian bees and queens. Catalog free.

EARL M. NICHOLS

Lyonsville, Massachusetts

ATTENTION!

Very important to all beekeepers all over the world who desire to improve their native or mixed strains of bees!

THE DIRECT EXPORTATION FROM CARNIOLA OF THE GRAY-BANDED ALPINE BEE, which until now was conducted by the Imperial Royal Agricultural Ass'n of Carniola, the undersigned will, IN THE FUTURE, MANAGE ON HIS OWN ACCOUNT. JOHANN STRGAR, Witsch.

P. O. Wochsiner Feistriz, Upper Carniola (Krain), Austria.

Owner of 58 Honors awarded to him at various apicultural exhibitions for his achievements as a breeder of the best strain of Carniolans and producer of apicultural products. ALL QUEENS TAKEN FROM FULL COLONIES, AND NOT OVER ONE YEAR OLD. Mailed postage free. Dead select tested queens will be replaced if returned in 24 hours after arrival, except when they arrive in such a state in South America or Australia. Dead select untested queens can not be replaced. Send remittance per Intern. Money Order with order. Safe arrival of nuclei and hives not guaranteed. Orders of this kind must be accompanied by freight expenses. The safest transport of stock is in Carniolan box hives. After arrival or later the combs can be cut out to fit any frame. Prices of select tested queens: March, April, May, \$5.00; June, July, Aug., Sept., Oct., \$3.50. Select untested queens: June, July, Aug., \$2.00. Carniolan box hives with 4 to 5 lbs. of bees, select tested queen, brood combs, honey, \$1.00, on board R. R. station Wochsiner Feistriz. Write English for complete Price List and new Booklet (which will be mailed postage free) under above address.

CO-OPERATION means buying right and selling right. We are a co-operative association, and sell the best bee-supplies obtainable at the right prices. It will pay Western beekeepers to send for our illustrated catalog.

The Colorado Honey Producers' Assn., Denver, Colo.

How to Keep Bees

BY ANNA BOTSFORD COMSTOCK

This is an excellent book for the beginner. Nothing better. We cordially recommend it to all who are learning beekeeping by their own effort. Having commenced beekeeping three times, the talented author is in a position to furnish the right kind of advice. You can not go wrong in getting this book. It is charmingly written and easily understood. Price \$1.10 postpaid.

THE A. I. ROOT COMPANY, MEDINA, OHIO.

Honey reports continued from page 2.

CHICAGO.—There is no change of any importance in the market since our last report. Of course the volume of business is gradually growing less; but the comb honey seems to be exhausted, or nearly so. Chicago, April 7. R. A. BURNETT & CO.

LIVERPOOL.—Chilean honey, retail sales at late rates. Business is limited by small supplies—\$6.12, c. i. f., being asked for average pile 3; April-May shipment, buyer's ideas, \$5.88. A moderate trade has been done in New Zealand honey at \$10.80, and in Jamaican at \$6.72 to \$7.20, and stocks are now cleared. Small sales of the best Californian have been made at \$11.04; \$9.96 to \$11.04 is quoted. For Chilean beeswax the market is firm. Spot stocks have been cleared at \$39.48 to \$40.38 per cwt. Four tons have been sold at \$41.88 per March-April shipment.

Liverpool, April 2.

TAYLOR & CO.

Better Queens

I have had 17 years' experience rearing queens, and am, this year, rearing all the queens for the Shely-Murry Bee Co. from the best stock obtainable. In addition to supplying our own yards with all the young queens wanted, I shall offer for sale a few at the following prices—three-banded Italians:

Untested: 90c; 6 for \$5.00; 12 for \$9.00; 100 for \$65.00.

Tested: \$1.00; 6 for \$5.50; 12 for \$10.00; 100 for \$75.00.

Select Tested: \$1.50; 6 for \$8.00; 12 for \$15.00.

A few fine breeders at \$5.00 each. Prices of nuclei upon application.

H. D. Murry

Manager Shely-Murry Bee Co.

Mathis, Texas

BREEDING QUEENS . .

Can be sent out any time after May 1. We have a choice lot of Italian queens at \$2.50, \$5.00, and \$10. No untested queens before July. Send for circular.

Doolittle & Clark, Marietta, N. Y.
Onondaga County

Our HAND-MOORE STRAIN 3-BAND ITALIANS

Are the best honey-gatherers. They spoil our white-clover honey by mixing it with red-clover. Record tongue reach 23-100 of an inch. Breed strictly for business. Untested, 75c; 12 for \$8.00; 50 for \$25.00.

LATSHAW HONEY COMPANY
CARLISLE, INDIANA

PHARR'S QUEENS. . . .

We desire to thank our former patrons, and ask that, when you are in need of Golden or three-banded Italians, you send your order to us and receive fair treatment. Tested, \$1.50; untested, \$1.00. For prices on large quantities write us. . . . Breeders, \$3.00 to \$5.00.

W. H. LAWS

is again ready to fill your orders for queens the present season. Law's Red-clover Italians are as good as can be had.

One firm who bought over 1100 queens from me in 1912 says, "Your queens are very satisfactory." We are booking orders now, and we are going to do our level best to maj! all queens by return mail when so ordered. My bees are absolutely clean and free from all disease.

Queens sent out under the usual guarantees. Prices: Single queen, \$1; six for \$5. Breeding queens, none better, each, \$5.

W. H. LAWS, BEEVILLE, BEE COUNTY, TEXAS

Taylor's Three-banded Italian Queens

are now Ready to go by Return Mail

We have hundreds of fine testimonials about our queens. Untested, \$1.00 each or \$9.00 a doz. Tested, \$1.25 each or \$14.00 a doz. Select tested, \$1.50 each or \$16.00 a doz. Breeders, the very best, from \$3.00 to \$5.00 each. No better queens raised. Send all orders to

J. W. Taylor & Son, Beeville, Texas

ITALIAN QUEENS--NORTHERN BRED

Superior winterers; descriptive list free. Bees by the pound. Untested, \$1.00; select tested, \$1.50. Plans "How to Introduce Queens," 15c; "How to Increase," 15c; both for 25c.

E. E. MOTT, Glenwood, Mich.

SPRING IS HERE

and soon the bees will be flying, breeding, and increasing in strength. . . Swarming will then take place. . . Are you prepared for the increase? . . Be forehanded, and have your hives all ready. . . We carry a large line of hives and other goods. Our catalog for 1913 is now ready for mailing. A copy will be sent you on request.

THE A. I. ROOT CO., SYRACUSE, N. Y.

POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

Elk Grove, Cal.

The Most Economical Motorcycle Ever Made

ON July 3rd, 1908, the Harley-Davidson established a new world's record for economy, traveling 50 miles over give and take country roads on one quart and one ounce of gasoline.

Despite continued repeated efforts to break this record, it has never been even equalled by any other make of machine. In addition to its economy, the

HARLEY-DAVIDSON

has many desirable exclusive features, among which are the **Ful-Floteing Seat** and **Free-Wheel Control**. These two combined features have, unquestionably, made the Harley-Davidson the most comfortable motorcycle. Local Harley-Davidson dealers everywhere have machines on display. Call and see them or write for our new catalog.

BEESWAX WANTED!

Recent demand for comb foundation has been good, and our stock of beeswax is running low. We offer for good average quality and prompt shipment 30 cts. per lb. cash, or 32 in trade, delivered at Medina. Shipments from the Pacific coast should be in barrels or boxes. From other Western points, pack in double bags to get the most favorable rate. Be sure to mark the shipment so it can be identified when it arrives, and send us a shipping receipt with a statement of gross, tare, and net weight shipped. This is important as it gives us something to check so as to determine whether any has been lost in transit.

HONEY AND WAX FOR SALE

Spanish-needle honey, blended; quality the finest; 60-lb. tins, or liquefied in pails of any size.

F. B. CAVANAGH, Hebron, Ind.

Fancy clover honey in one-gallon cans. One, \$1.50; two, \$1.45 each.

GEO. SHIBER, Randolph, N. Y.

FOR SALE.—Finest quality clover and clover-bass-wood honey in 60-lb. cans. C. J. BALDRIDGE,

Homestead Farm, Kendaia, N. Y.

FOR SALE.—Two dozen 60-lb. cans of clover honey, 7½ cents per lb. Samples on application.

J. RIDLEY, Stevensville, Mont.

We have on hand a large shipment of extracted white-clover honey from a prominent producer. This honey has a very heavy body, and was well ripened before it was taken off the hives. We ship it, if preferred, in liquid form without extra charge, in new tin cans holding five gallons each, two cans in a case. Ask for free sample of lot 81, and our price. We have some fine fall amber extracted. An early fall flow caught a producer before he could get his white honey off, so his crop had to be graded as amber. Free sample and the price for asking. Lot No. 69. THE A. I. ROOT CO., Medina, Ohio.

ARVIN, Nusbaum Co., Meltrim, Ga.

FOR SALE.—Swarms! Swarms! ½ lb. young bees with untested Italian queens, shipped as 1½ lbs., \$1.75; 1 lb. young bees with untested Italian queen, shipped as 2½ lbs., \$2.25, F. O. B. here; 6, 10 cts. less each. This is the best way to increase and improve your bees. Safe arrival and satisfaction guaranteed. Circular free.

W. D. ACHORD, Fitzpatrick, Alabama.

There is a key to all business; and the key to successful honey-production is "good" queens. We have them, and know how to raise them. Thirty-five years' experience. Three-banded Italians, 75 cts. each; \$4.25 for 6; \$8.00 per dozen. Safe arrival and satisfaction to everybody. We handle successfully the orders of the largest producers.

THE RIALTO HONEY CO., Rialto, Cal.

FOR SALE.—Three-banded Italian queens and packages. Best honey-gatherers. Satisfaction or your money back. No disease. Ready about April 1. One untested queen, 75 cts.; 6 for \$4.25; 12 for \$8.00. After April 15, ½ lb. bees, \$1.00; 1 lb., \$1.50; good weight; f. o. b. here by express. Add price of queens if wanted. These are young bees, so will live longer than those you have wintered.

W. D. ACHORD, Fitzpatrick, Bullock Co., Ala.

We will require all our 2000 colonies this spring with young queens, bred from our best home and imported Italian stock. We offer the year-old queens, removed from these hives, at 40 cts. each; untested queens, this year's breeding, 60 cts. each. Special reduced prices for 100 or more, either old or young. We breed for business, not looks. No disease; delivery guaranteed. Book orders now to insure early delivery. SPENCER APIARIES CO., Nordhoff, Cal.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

Our subscribers, when planning to place orders, will do well to inquire whether or not our advertisers can supply queens on the dates desired. Mr. F. Hughes, Gillet, Ark., writes us under date of April 4 that he is booked full for spring delivery.

1913 EDITION OF A B C AND X Y Z OF BEE CULTURE.

We are just completing the first copies of the latest edition of fifteen thousand, and hope to be sending them out before the first of May. The revision of this edition has been more thorough than any previous one, and it is from an entirely new face of type, and the size increased to over 750 pages. The price is also raised to \$2.00 postpaid, or \$2.75 for the half-leather edition. We still have a few copies of the 1910 edition for sale at the old price, \$1.50 postpaid, or \$1.25 with other goods not prepaid.

LECTURES ON BEEKEEPING.

We have arranged to continue the lectures on our roof at 10 Vine St., Philadelphia, on Tuesdays and Fridays from 11 to 12 o'clock, during May and June. Tuesdays will be devoted to instructions for beginners, handling bees, taking swarms, preparing for the honey-flow, etc. Fridays will be for advanced beekeepers, the scientific side of the transformation of nectar, the formation of wax, with some instructions as to the bacteriological side of foul brood, its contagion, etc. Kindly note that the hour is 11 to 12, on both Tuesday and Friday.

Up to the time of going to press we have had comparatively few reports of serious loss to beekeepers or supply-dealers in Ohio from the recent floods, although there have undoubtedly been many individual losses not yet reported. The most serious loss to supply dealers' stock is probably that reported by E. W. Peirce, Zanesville, whose announcement is found on page 9. Mr. Peirce, writing us on April 2, said that the water reached a point 16 feet higher than any previous record, the crest of the flood coming within three feet of the ceiling of the second floor. Mr. Peirce says: "As yet I am unable to make any thing like an accurate estimate of the loss. Provisionally the last carload order was not in, and the stock was the lowest for several years." Advice received in the last few days from Mr. Peirce indicate that he is now able to take care of business promptly, and his many friends and customers will do him a favor by sending along their orders as usual.

SWEET-CLOVER SEED.

So far as we can learn, the supply of white-sweet-clover seed, either hulled or unhulled, is exhausted, excepting two moderate-sized lots in the hands of seed-dealers, which is being held at very firm prices. We can offer hulled imported seed from New York in lots of 100 lbs. or more, or hulled domestic seed from Lawrence, Kan., subject to previous sale and supply on hand, at \$28.00 per 100 lbs. The supply is so limited that you will need to speak quickly if you secure any of it. A number who have ordered the white sweet clover, which we have been unable to supply for several weeks, have consented to take the yellow biennial, of which we still have a fair stock on hand. From all that we can learn, we believe you will make no mistake in trying this variety. For all purposes it is considered by many who have tried it fully equal to the white. We will supply the seed, while it lasts, at the same old price at which we have been selling.

	1 lb.	10 lb.	25 lb.	100 lb.
Hulled yellow biennial,	.28	\$2.60	\$6.25	\$24.00
Unhulled yellow biennial,	.21	1.90	4.50	17.00
Hulled yellow annual,	.14	1.20	2.75	10.00

The A B C and X Y Z of Bee Culture came to hand. I want to say the information I got by reading about swarming, uniting, transferring, feeding for winter and stimulation, are alone worth the price of the book, not saying any thing further on the other subjects it contains. You certainly have given the book the right name, as it gives you just what you want from start to finish.

FRANK LANGOHE.

Columbia City, Ind., March 5.

ESTABLISHED 1891

TOEPPERWEIN & MAYFIELD CO.

(Incorporated)

Cor. Nolan and Cherry Sts.**San Antonio, Texas**

Factory and Warehouse.

To Our Friends and Patrons

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as all those engaged in the business.

Owing to the constantly increasing demand for comb foundation and beekeepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$100,000.00.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{3}{8}$ -inch frames, same as described in our catalog, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives..

Shortly before the death of Mr. Mayfield, Mr. Udo Toepperwein sold his interest to Messrs. R. W. Hearne and B. L. Raborn, well-known business men of San Antonio. The retirement of the older members of the company will in no way change the policies of the new management except to increase materially the capital with the view of carrying a large stock of supplies. Mr. Morris, who has been practically the manager of the Toepperwein & Mayfield Co., continues with the new management.

It is the intention of the new management to increase materially the capital of the company, with the view of carrying a stock of supplies that will meet all the requirements of the trade. This will enable us to effect prompt shipments at all times, and thus avoid any delay and annoyance to customers on account of shortage of stock.

It will be our endeavor to accord our customers all possible courtesies and consideration in any matters that may arise. Mistakes will occur at times, as is only natural, and we only ask that they be brought to our attention so that they may be rectified. Our customers may be assured of the best quality of goods at as reasonable prices as are consistent with business methods.

Our new catalog on request. Address

TOEPPERWEIN & MAYFIELD CO., - San Antonio, Texa

ROOT'S BEEKEEPERS' SUPPLIES . . .

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequently letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation, this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1913.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

Cartercar

Offered
in Four
Excellent
Models

Model 5A Touring Car, Fully Equipped, **\$1700**

You Have Worked for Your Money; Let Your Money Work for You.

Make your bank account get out and hustle for the things worth while in life. Make it buy for you and your family the many pleasures of a **Cartercar**. This is an investment that will reap something more than sordid interest.

Imagine some of the many enjoyments you would be able to get from a **Friction-driven Cartercar**. A spin into town, long drives in the cool of the evening, the social possibilities for the young folks, and certain transportation for the children in bad weather—all reflect the dignity of a successful man.

Don't be frightened by the much talked of "after cost" of an auto-

mobile. If it is a **Cartercar** you don't need to worry about the repair bills. They will be few and far between.

The Friction-transmission is just the thing to climb hills and plough through bad roads with. No chance of putting your machine in the repair shop if you want to ascend a steep grade or ride on an unimproved road.

Cartercar is presented in four splendid models: Model 5A Touring Car \$1700, Model 5B Roadster \$1600, Model 5C Colonial Coupe \$1900, Model 5D \$2000. All models include Electric starting and Lighting and in their full equipment.

DO YOU LOVE SWEETS?

RALPH WALDO EMERSON DID

He said you can attain to royalty by loving sweets.

“He who knows what SWEETS . . . are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man.”

“HOW to come at these?”

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*.

Want to know how?

The Guide to Nature
Arcadia, Sound Beach, Conn.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, “a bee-man” and a naturalist.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—Fancy and No. 1 white comb, 16 to 17; fancy white, 11 to 12. Beeswax, 30.
Boston, April 19. **BLAKE-LEE CO.**

ALBANY.—The honey market is very quiet, being between seasons. No comb honey—only extracted on the market, and that is in slow demand. Beeswax, 30 to 32.
Albany, April 18. **H. R. WRIGHT.**

COLUMBUS.—Our market is very dull on comb honey. Plenty of Colorado and Eastern honey to supply all demand. Fancy white comb, 17 to 18; No. 1, $16\frac{1}{2}$ to 17; No. 2, \$2.25 per case of 24 sections.

Columbus, April 16. **THE EVANS & TURNER CO.**

DENVER.—We quote comb honey in a jobbing way at the following figures: No. 1, \$3.05; fancy, \$3.15 per case of 24 sections; extracted honey, white, 9; light amber, 8; strained, 6½ to 7. We pay 28 cts. in cash and 30 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION,
Denver, April 16. **FRANK RAUCHFUSS, Mgr.**

CINCINNATI.—There is a fair supply of comb honey on the market, and we are selling our fancy double-decker comb honey at \$3.75 to \$4.00 a case; fancy extracted honey, in 60-lb. cans, at 9 to 10 cts. per lb. and amber extracted honey in barrels at 6½ to 8, according to the quality and quantity purchased. For choice bright yellow beeswax we are paying 28 to 30 cts. delivered here; and if taken out in trade, 2 cts. per lb. more.

Cincinnati, April 17. **THE FRED W. MUTH CO.**

An Active Season is Here

A carload of perfectly new goods is just on hand from the factory, and another car is expected any day, and the factory has booked us for four cars. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for swarms. Frames, and other inside fixtures too, should be put together now.

If you are wanting any special goods, orders should be made at once. Other cars are coming regularly from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

The mailing of our new catalog was completed some time ago. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder—the best in the market. Write for our catalog.

Honey reports continued from page 2.

KANSAS CITY.—The supply of comb honey is entirely exhausted. We still have some demand. The supply of extracted honey is light—demand also light. We quote extracted white, 8 to 8½; extracted amber, 7 to 7½; beeswax, 25 to 28.

C. C. CLEMONS PRODUCE CO.

Kansas City, April 17.

SCHENECTADY.—We have had a few small shipments of comb honey from producers who have not succeeded in closing out all their own crop; and, on account of the maple-sugar yield being very small, it meets with ready sale at fair prices. But little is doing in extracted.

Schenectady, April 7. CHAS. MACCULLOCH.

INDIANAPOLIS.—Market is now practically bare of fancy white comb honey. No. 1 white is selling at 16 to 17; amber comb is in slow demand, and at varied prices. Best extracted sells at from 11 to 12 in five-gallon cans, according to quantity. Beeswax is in good demand, and producers are being paid 30 cents cash or 32 in trade.

Indianapolis, April 16. WALTER S. POWDER.

CHICAGO.—Comb honey has cleaned up, this market being practically bare at this time. But that is not the case with the alfalfa and sweet-clover grades. Fancy comb brings 17 to 18, with other grades from 1 to 5 cts. per lb. less. Extracted clover and lindens bring 9 to 10; other white honeys, 7½ to 9. Beeswax, 31 to 32.

Chicago, April 17. R. A. BURNETT & CO.

BUFFALO.—Our market has nothing new to report; receipts are very light. We think about all the comb honey has been sent in. Prices are steady, but selling slow. We quote fancy white comb honey, 17 to 18; choice, 16 to 17; No. 1 ditto, 15 to 16; No. 2, 13 to 14; no dark offered. No. 1 white extracted brings 9 to 10; no dark or amber is offered. Beeswax, 27 to 28.

Buffalo, April 18. W. C. TOWNSEND.

NEW YORK.—We have really nothing to report of any consequence. A few little lots of comb honey still are arriving, but not to cut any figure. If in good condition, it will bring about the same price as in our last quotation; but where some lots are beginning to show signs of crystallization they will have to be sold at a much lower figure. Extracted honey, all grades, is very quiet. While the stock is not heavy, there are shipments coming in right along from the West Indies—more than enough to supply the demand. No change in prices. Beeswax is steady at 30 to 32, according to quality.

New York, April 18. HILDRETH & SEGELKEN.

Convenient Banking

Banking by Mail is the most convenient method of transacting financial affairs.

You can deposit your savings with the Savings Deposit Bank Company of Medina by sending Money Order, Check, Draft, or Currency in Registered Letter, and they will reach us safely.

The money is protected by the United States Postal authorities until it arrives, and is then safeguarded by this strong successful bank.

We pay 4 per cent compound interest on savings accounts of \$1.00 or more.

Further information furnished upon request.

The SAVINGS DEPOSIT BANK COMPANY

Medina, Ohio

Under the Supervision of the State of Ohio

CINCINNATI.—The market on comb honey is in good demand with a fair supply. No. 1 white sells at \$3.65 per case of 24 sections wholesale, and \$4.00 per case retail. There is no demand for off grades. Light extracted honey in 60-pound cans, 8 to 8½. White extracted honey in 60-pound cans, 9 to 10. Beeswax is selling at \$34.00 per 100 pounds. The above are our selling prices, not what we are paying. Cincinnati, April 18. C. H. W. WEBER & Co.

CROP REPORT BLANKS

will be sent to every subscriber of the "Review" in proper time, and the crop conditions as given by these reports will be published later.

BRINGING BUYER AND SELLER TOGETHER

for the sale of your honey crop will be another work that will be carried on the same as last year.

CANS AND GLASS PACKAGES

will be furnished the subscribers by the "National" the same as last year. We may have better prices.

TOLEDO

"Griggs Saves Your Freight"

We have made arrangements with a large Southern breeder to furnish us with BEES and QUEENS, and orders will receive our prompt attention commencing April 1. First come, first served. Be first.

ORDER BEE-SUPPLIES NOW.—Large car of new goods on the way to fill the rush of early orders coming in. Send your orders now.

POULTRY FEEDS AT WHOLESALE—Write for special prices of feed to be shipped with your order of bee-supplies. Cut out the middle man.

BEE-SWAX.—We can use five tons of good first-class wax. Send yours in now. Cash or in trade. Free catalog. Ask for one.

S. J. GRIGGS & CO. . . 26 North Erle Street . . TOLEDO, OHIO

"If Goods are wanted Quick, send to Pouder."

Bee Supplies Up to Date

EQUIPMENT. — Storeroom built expressly for the business; large concrete basement with just enough moisture to prevent breakage in sections and shrinkage in dovetailed corners of supers and hives. Electric lift brings up two tons of goods to first floor in thirty seconds for shipment. Does this appeal to you?

QUALITY. — Root goods at the factory schedule of prices, whether you require one hive or a hundred. This is the quality that I have handled for nearly a quarter of a century, and the kind that you can recommend to your visiting neighbors. I MIGHT have increased my profits for a SHORT TIME by handling other goods, but I would not have remained so long in the business.

GUARANTEE. — Many articles described in my catalog can now reach you by parcel post, and I assume all responsibility in safe arrival of goods. I have the very finest tight-seal glassware for putting up extracted honey, and I guarantee safe arrival—no breakage at purchaser's loss. I have waxed-paper honey-jars that are a decided success wherever they have been used.

MY CATALOG. — My catalog describes all of these things, and contains valuable information for those who are interested. I shall be pleased to show you how promptly I can get one into your hands if you will drop me a card.

BEESWAX. — Remember me when you have wax to offer, cash or trade, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.
873 Massachusetts Avenue

Out of the Flood!

I desire to announce to my bee-keeping friends that I have secured a fine new location, and am already shipping small lots of goods, and expect to have a carload of choice fresh stock direct from the factory in my warehouse by the time this number of GLEANINGS reaches its readers. I expect to be able to furnish promptly as usual all regular goods from Zanesville, and with the resumption of service by the railroad and express companies, as well as the electric lines and parcel post, I am now able to give prompt deliveries of new stock from Zanesville.

If any one seeks a bargain in damaged stock, write for prices. Otherwise new stock will invariably be furnished. A continuance of your patronage is solicited.

E. W. Peirce, Zanesville, O.

So 6th St., Airdome Theater Bldg.

Mr. Successful Honey-producer:

Have you a son to learn your methods and policies, and to take over eventually the responsibility of your business when you wish to be relieved of it? If not, please give a healthy, ambitious young college man the opportunity he craves. Just let me write to you, anyhow.

P. C. G., Box 3442,

SPECIAL NOTICES

TO ADVERTISERS OF BEES AND QUEENS.

The following is addressed mainly to present or prospective advertisers of GLEANINGS IN BEE CULTURE who seek customers among the readers of our columns; and while it is addressed especially to those who wish to advertise bees or queens, it may apply in some respects to other advertisers as well. It is prepared in this form so that any one who receives it may understand that its application is general, and that he alone is not made the subject of special requirements or conditions not required or imposed on others.

The supplying of queen-bees, and to a less extent bees in colonies or nuclei or pound packages, is attended with a good many difficulties not readily understood by those who have not actually had one or more seasons' experience in this trade. To explain this, let us relate from our own experience as queen-breeders, and from the correspondence which reaches us both from our advertising friends and from subscribers to GLEANINGS who have ordered bees and queens from our advertisers or elsewhere.

At the beginning of a season a queen-breeder may have on hand a fairly good stock of queens; but having been reared very late the previous fall he has not had time to test. Another breeder may have on hand a quantity of tested queens, or perhaps a pretty liberal proportion of select tested or a number of good breeding queens, worth anywhere from \$5.00 to \$10.00. Now, unless the advertiser is very explicit as to the stock on hand, and as to the probable dates when he will be able to begin deliveries, customers may be disappointed greatly in not being able to get the grade of queen wanted from a certain advertiser or on the date expected, and too much care can not be taken to make the advertising clear and explicit. A number of new advertisers every year get into serious difficulty because their facilities for raising queens being limited, and the price quoted too low for safety, they receive orders early in the season which they expect to be able to fill shortly, and accept the money for the same, hoping to supply the stock within a reasonable time. Unfavorable weather may ensue, and they find themselves unable to fulfill their plans, and their customers are indignant and demand their money returned. A good deal of this trouble, which often assumes pretty serious aspects, could be avoided by more care in the wording of the advertisements, occasionally by taking more space. We therefore caution our advertisers to be explicit in their promises as to grades and quantities, and dates when deliveries can be made; and we caution our readers to understand these things before placing orders. It is amazing to learn that beekeepers will order queens from points one or two thousand or more miles away in lots of fifty or a hundred or more, cash with order, without knowing these things. The compliment is appreciated by the publishers of GLEANINGS, showing the confidence in which our advertisers are held; but, at the same time, where a small breeder will occasionally make very low prices to establish himself in the trade, careful discrimination should be made in the placing of large orders between the breeder with very limited experience or facilities, and those who have had years of experience and ample facilities for handling large orders. It would be unfair for the publishers to refuse space to a small but worthy queen-breeder simply because his output is very limited, for he may have some very fine stock, and it may be a decided advantage to those who are wanting only a few queens to get them from a small breeder at a moderate price. On the other hand, among the small breeders are occasionally found those who either are unprincipled or so inexperienced that they are not worthy of the confidence of our readers; and to make a distinction between these we require of all advertisers the most definite and explicit information in regard to their plans. We must know of every one securing space in our columns how large a yard he has from which he expects to raise queens; what breeding stock he has; when he expects to begin deliveries; and, more than all this, we must have reliable information as to the character of the advertiser; whether he will properly take care of orders placed in his hands, and promise to return promptly on request funds which have been placed in his hands for certain orders. Unless this information is fully supplied we shall decline the use of our columns to any one unwilling or unable to furnish it.

Notice! Queens by Return Mail, from Caraway's Prize Winning Stock.

Three-banded Italians only, at the following prices: Untested, 90 cts. each; 12 for \$9.00; 100 for \$65.00. Tested, \$1.00 each; 12 for \$10.00. I have a few fine breeders at \$5.00 each.

Two hundred two-frame nuclei: One for \$3.00; ten for \$27.50. For larger number, write for price. Also bees by the pound. One pound for \$1.50; 10 one-pound packages for \$12.50. Add to the above the price of the queen or queens desired. I guarantee nuclei and bees by the pound to arrive in fair condition within a radius of 1250 miles. Positively no disease in my apiaries.

On all queens purchased of me I guarantee them to give entire satisfaction. I use the best-known methods of rearing queens. My original stock was from Root's strain and other prominent breeders, and I keep adding imported blood to by apiaries.

I hold 92 first, 45 second, and 2 third prizes on my bees and queens and products of my apiaries. This speaks for itself. The best possible to obtain. My three-banders carried off first prize again at Dallas and Waco last fall.

I will have from 500 to 1000 mating-nuclei. I also sell nuclei. If interested write for circular and price list describing my bees and queens. It is free.

B. M. Caraway, Mathis, Texas

BREEDING QUEENS . .

Can be sent out any time after May 1. We have a choice lot of Italian queens at \$2.50, \$5.00, and \$10. No untested queens before July. Send for circular.

Doolittle & Clark, Marietta, N. Y.
Onondaga County

Queens reared scientifically from breeders perfected by years of elimination of all undesirable traits, are far better and more prolific than the ones hatched from a natural swarm of supersedure cells. We have the famous Moore strain of Italians, and are giving every care to the perfection of cells and mating. We have never had any disease in or near our apiary. If you are interested, write us for booklet. Untested queens, 75 cts.; dozen, \$8.00.

WALLIN & CORLIS, Brooksville, Ky.

PHARR'S QUEENS.

We desire to thank our former patrons, and ask that, when you are in need of Golden or three-banded Italians, you send your order to us and receive fair treatment. Tested, \$1.50; untested, \$1.00. For prices on large quantities write us. . . . Breeders, \$3.00 to \$5.00.

New Century Queen Rearing Co.
Berclair, Texas

W. H. LAWS

is again ready to fill your orders for queens the present season. Law's Red-clover Italians are as good as can be had.

One firm who bought over 1100 queens from me in 1912 says, "Your queens are very satisfactory." We are booking orders now, and we are going to do our level best to mail all queens by return mail when so ordered. My bees are absolutely clean and free from all disease.

Queens sent out under the usual guarantees. Prices: Single queen, \$1; six for \$5. Breeding queens, none better, each, \$5.

W. H. LAWS, BEEVILLE, BEE COUNTY, TEXAS

Taylor's Three-banded Italian Queens

are now Ready to go by Return Mail

We have hundreds of fine testimonials about our queens. Untested, \$1.00 each or \$9.00 a doz. Tested, \$1.25 each or \$14.00 a doz. Select tested, \$1.50 each or \$16.00 a doz. Breeders, the very best, from \$3.00 to \$5.00 each. No better queens raised. Send all orders to

Factory Prices for the Asking— on Genuine Witte Engines

**FREE
Engine
Book**

THE genuine Witte—conceded the best farm engine in America—now offered at actual wholesale prices. Yes, this is the engine that has lead the gasoline engine field for 25 years. Dealers have been getting the highest prices for the Witte. Now you can get one at actual factory price—what the dealer paid—and have the finest engine in your county.

Our Gas Well Saves You Many Dollars More

We do more than give you ordinary factory prices. We are the *only* manufacturers who have our own gas well. Power, testing, forge, foundry and heating fuels cost us nothing. You get the benefits. But you couldn't afford to own any other engine even if the Witte cost twice as much—because an average of 1 cent for every horse-power per hour *cuts gasoline bills in half*—rays for your engine in no time.

Every part *guaranteed 5 years—full rated horse power on minimum gasoline guaranteed too.* Built in all sizes from 1½ to 40 h. p., every one tested to 10% over load.

WRITE FOR 60 DAYS FREE TRIAL OFFER

and complete, direct, factory price proposition with catalog and special offer bulletin. We expose engine secrets in this bulletin that will startle you. BEESWAX WANTED!

Recent demand for comb foundation has been good, and our stock of beeswax is running low. We offer for good average quality and prompt shipment 30 cts. per lb. cash, or 32 in trade, delivered at Medina. Shipments from the Pacific coast should be in barrels or boxes. From other Western points, pack in double bags to get the most favorable rate. Be sure to mark the shipment so it can be identified when it arrives, and send us a shipping receipt with a statement of gross, tare, and net weight shipped. This is important as it gives us something to check so as to determine whether any has been lost in transit.

B. here; 6, 10 cts. less each. This is the best way to increase and improve your bees. Safe arrival and satisfaction guaranteed. Circular free.
W. D. ACHORD, Fitzpatrick, Alabama.

Murray's famous North Carolina bred Italian queens (red clovers) for sale again. As good as the best; no foul brood. They are as good honey-gatherers as can be obtained, and as gentle, and winter as well. Select untested, \$9 per doz.; untested, \$8 per doz.; tested, \$1.25; select tested, \$1.50; extra select tested, \$2; breeders, \$3 and \$5.
H. B. MURRAY, Queen-breeder, Liberty, N. C.

Three-banded Italian queens and bees. Untested queen, 75 cts. each; six, \$4.25; twelve, \$8.00; tested, \$1.25 each; six, \$7.00; twelve, \$12.00. For select queens add 25 cts. each to the above prices. Nuclei without queens, one-frame, \$1.75; two-frame, \$3.00; three-frame, \$3.50. For nuclei in quantity lots, and bees by the pound write for prices and circular.
ROBT B. SPICER, Wharton, N. J.

FOR SALE.—Three-banded Italian queens and packages. Best honey-gatherers. Satisfaction or your money back. No disease. Ready about April 1. One untested queen, 75 cts.; 6 for \$4.25; 12 for \$8.00. After April 15, ½ lb. bees, \$1.00; 1 lb., \$1.50; good weight; f. o. b. here by express. Add price of queens if wanted. These are young bees, so will live longer than those you have wintered.
W. D. ACHORD, Fitzpatrick, Bullock Co. Ala.

There is a key to all business; and the key to successful honey-production is "good" queens. We have them, and know how to raise them. Thirty-five years' experience. Three-banded Italians, 75 cts. each; \$4.25 for 6; \$8.00 per dozen. Safe arrival and satisfaction to everybody. We handle successfully the orders of the largest producers.

THE RIALTO HONEY CO., Rialto, Cal.

We will requeen all our 2000 colonies this spring with young queens, bred from our best home and imported Italian stock. We offer the year-old queens, removed from these hives, at 40 cts. each. Untested queens, this year's breeding, 60 cts. each. Special reduced prices for 100 or more, either old or young. We breed for business, not looks. No disease; delivery guaranteed. Book orders now to insure early delivery.

SPENCEE APIARIES, Nordhoff, Cal.

Try my famous strain of bees and queens, and be convinced that they are all I claim for them. For honey-gathering they have few equals, being bred strictly for business from the best strains that could be had, both queens and drones, as it is as important to have drones of the best as it is queens. Queens, Italian three-band, or Golden five-band, and Carniolans, bred in separate yards. Untested, 1, \$1.00; 6, \$5.00; 12, \$9.00; 25, \$17.50; 50, \$34.00. Nuclei, with the untested queen, one-frame, \$2.50; 6 one-frame, \$15.00; two-frame, \$3.50; 6 two-frame, \$20.00. Nuclei with tested queen, one-frame, \$3.00; 6 one-frame, \$17.40; two-frame, \$4.00; 6 two-frame, \$23.40. Satisfaction and safe arrival and prompt service guaranteed.

D. E. BROTHERS, Attalla, Ala.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

SECOND-HAND CANS.

We have a call for a carload of second-hand 60-lb. cans, which we recently offered, but we have some over a car, and can still supply a few hundred cases at \$3.50 for 10; \$7.50 for 25, or \$25.00 per 100. There are two cans to a case. They have screw caps, are free from rust inside, and boxes are repaired where needed, and in good condition.

BUCKWHEAT SEED.

We have a good stock of choice buckwheat for seed, both silverhull and Japanese. The season for sowing is rapidly approaching. Our price for seed, while present supply lasts, is 40 cts. per peck; 75 cts. for ½ bushel; \$1.25 per bushel; \$2.25 for two bushels, bag included in each case. If you plan to sow any, and are not provided with seed, you had better send your order while the seed is available.

LECTURES ON BEEKEEPING.

We have arranged to continue the lectures on our roof at 10 Vine St., Philadelphia, on Tuesdays and Fridays from 11 to 12 o'clock, during May and June. Tuesdays will be devoted to instructions for beginners, handling bees, taking swarms, preparing for the honey-flow, etc. Fridays will be for advanced beekeepers, the scientific side of the transformation of nectar, the formation of wax, with some instructions as to the bacteriological side of foul brood, its contagion etc. Kindly note that the hour is 11 to 12, on both Tuesday and Friday.

SWEET-CLOVER SEED.

We are now provided with a limited quantity of white-sweet-clover seed, both hulled and unhulled, which we offer, subject to previous sale, at the prices given in table below. We still have a fair supply of the yellow, both hulled and unhulled. We are sowing four acres of ground with the biennial yellow, and hope to be in position to report from experience as to the merits of this variety as compared with the white.

	Price in lots of	1 lb.	10 lbs	25	100
Melilotus alba, biennial....					
White sweet clover, hulled	32	\$3.00	\$7.25	\$28.00	
" " unhulled	22	2.00	4.75	18.00	
Melilotus officinalis, biennial					
Yellow sweet clover, hulled	28	2.60	6.25	24.00	
" " unhulled	21	1.90	4.50	17.00	
Annual yellow, hulled....	14	1.20	2.75	10.00	

Samples mailed free on request.

Kind Words from our Customers

Enclosed please find \$1.00, for which send me GLEANINGS for another year. I wouldn't miss a copy for any thing. In one of your recent numbers I read where a man in this State did not want a "journal devoted to how one man thought the world ought to be run," but I think it is devoted to the way the "majority of people want it to be run." I welcome your paper every two weeks, and am interested in the Home department.

Worcester, Mass.

GEORGE H. HOSMER.

A KIND WORD FROM FAR-OFF BRITISH COLUMBIA.

[We let the writer of the following story tell it in his own quaint phraseology.—A. I. R.]

Mr. A. I. Root:—This is first my letter to you. I am trying to write English. I am a foreigner.

I find we shall read what is good, and never shall we say in this world we have not time to read, and especially when we come to be of old age.

In your writing in GLEANINGS you are very severe on big able-bodied man abegging.

I been thinking what will replace you in your journal in your good Home talk when you be here no more, or when you come to die. In my own hearth you been always to me as model man. When young you first make a start by working for your daily bread; and now in your old age it is right for every man when he come to old age to be sure to belong to the Lord Jesus Christ.

I am now sure for Christ. I feel glad I find the Lord our God is with us; and he is too holy to be with sinners.

I am trying now every day to live righteous before him.

I am a reader of your journal, and can not write good English. I learn a little writing from reading, and reading I learn by myself. I keep bees now to make money, and I like bees much, I must say, for pleasure.

Elwina, B. C., Canada, Nov. 13.

H. KACER.

ESTABLISHED 1891

TOEPPERWEIN & MAYFIELD CO.

(Incorporated)

Cor. Nolan and Cherry Sts.**San Antonio, Texas**

Factory and Warehouse.

To Our Friends and Patrons

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as all those engaged in the business.

Owing to the constantly increasing demand for comb foundation and beekeepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$100,000.00.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{3}{8}$ -inch frames, same as described in our catalog, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives..

Shortly before the death of Mr. Mayfield, Mr. Udo Toepperwein sold his interest to Messrs. R. W. Hearne and B. L. Raborn, well-known business men of San Antonio. The retirement of the older members of the company will in no way change the policies of the new management except to increase materially the capital with the view of carrying a large stock of supplies. Mr. Morris, who has been practically the manager of the Toepperwein & Mayfield Co., continues with the new management.

It is the intention of the new management to increase materially the capital of the company, with the view of carrying a stock of supplies that will meet all the requirements of the trade. This will enable us to effect prompt shipments at all times, and thus avoid any delay and annoyance to customers on account of shortage of stock.

It will be our endeavor to accord our customers all possible courtesies and consideration in any matters that may arise. Mistakes will occur at times, as is only natural, and we only ask that they be brought to our attention so that they may be rectified. Our customers may be assured of the best quality of goods at as reasonable prices as are consistent with business methods.

Our new catalog on request. Address

TOEPPERWEIN & MAYFIELD CO., - San Antonio, Texas.

ROOT'S BEEKEEPERS' SUPPLIES . . .

"You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequently letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation, this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1913.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

\$1700

Take the Wheel Yourself

Don't be one of those fellows who always sits back and looks on. Who, when he sees a friend with his family out enjoying the many delights of a **CARTERCAR**, sighs and says, "How nice!"

Be a **DOER** yourself.

Don't let that nightmare of all prospective buyers—"After Cost"—keep you from getting all those pleasures.

If you only knew how seldom a **CARTERCAR** owner is forced to lay his machine up for repairs, how little cause he has to be concerned with the tire-upkeep problem because **Friction-transmission** lengthens their service, then you wouldn't hang back.

If you could see **CARTERCAR** owners repairing and adjusting their own cars with perfect satisfaction, you would then realize why the **GEARLESS-TRANSMISSION** car is in such demand.

If there was only some way of making you realize that all this talk about women driving the **CARTERCAR** without trouble is the truth, and that hill climbing and bad-roads touring are easy with a **CARTERCAR**, you would lose no time getting in line.

You admit that the price—\$1700 for a fully equipped Touring Car, and \$1600 for a Roadster—is reasonable enough; why then let a silly myth about the enormous cost of maintenance scare you away?

Look into the **CARTERCAR** from every angle and be sure that it is the one and only car for you.

DO YOU LOVE SWEETS?

RALPH WALDO EMERSON DID

He said you can attain to royalty by loving sweets.

“He who knows what SWEETS are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man.”

“HOW to come at these?”

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*.

Want to know how?

Arcadia, Sound Beach, Conn.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, “a bee-man” and a naturalist.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight, will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—Fancy and No. 1 white comb, 16 to 17; fancy white, 11 to 12. Beeswax, 30.
Boston, May 6. **BLAKE-LEE CO.**

CHICAGO.—The honey market is nominal at this time, with unchanged condition from our last quotations.

Chicago, May 2. **R. A. BURNETT & CO.**

INDIANAPOLIS.—Market is now practically bare of fancy white comb honey. No. 1 white is selling at 16 to 17; amber comb is in slow demand, and at varied prices. Best extracted sells at from 11 to 12 in five-gallon cans, according to quantity. Beeswax is in good demand, and producers are being paid 30 cents cash or 32 in trade.

Indianapolis, May 5. **WALTER S. POUER.**

ST. LOUIS.—We have no change to report in our honey market. There is barely any demand for comb honey nor for extracted, and the quotations which we give are nominal. We quote fancy white comb honey at 16 to 17; No. 2 white at 15; light amber, 13 to 14; by the case, fancy white comb honey, \$3.65 to \$3.75; No. 2 white, \$3.25 to \$3.40; amber, \$2.75 to \$3.10, according to quality. Dark and broken honey are unsalable at any price, as there is no demand for such. Extracted honey, Southern, in barrels and half-barrels, choice light amber, brings 6½ cents; dark, 6; in five-gallon cans, one-half cent higher. This is only for the better grades, as dark honey is not wanted. California, Utah, and Colorado honey, white, brings 9 to 9½ cents. Light amber, 8½, all in five-gallon cans. Beeswax is in good demand at 31; inferior and impure sells for less.

St. Louis, May 2. **R. HARTMANN PRODUCE CO.**

204 Walnut Street

Cincinnati, Ohio

An Active Season is Here

A carload of perfectly new goods is just on hand from the factory, and another car is expected any day, and the factory has booked us for four cars. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for swarms. Frames, and other inside fixtures too, should be put together now.

If you are wanting any special goods, orders should be made at once. Other cars are coming regularly from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

The mailing of our new catalog was completed some time ago. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder—the best in the market. Write for our catalog.

"Griggs Saves Your Freight"

TOLEDO

"Griggs Saves Your Freight"

is the place all successful beemen have their eyes on now. Proof is the way orders are streaming in here from all over the United States.

PROMPTNESS, LOW FREIGHT, and BEST PRICES are our motto. Satisfaction guaranteed. Think of it! our large **THREE-STORY WAREHOUSE**, right in the heart of the **CITY**, only 5 city blocks from ten of the largest **TRUNK RAILROAD SYSTEMS** in the world, and each trying to beat the other in prompt deliveries, gives us service no other agent enjoys. Even the **FACTORY** itself can't give such railroad service. This, all coupled with practical beemen to handle orders, insures against errors in packing.

WE HANDLE ROOT'S GOODS EXCLUSIVELY, and our warehouse is loaded from cellar to garret. Delays here in waiting for goods to arrive are very infrequent. Write for **SPECIAL PRICES IN QUANTITIES**, sending us a list of your wants. Free catalog for the asking. **BEEWAX** always wanted.

CHICKEN FEED OF ALL KINDS, at jobbers' prices. Car a week.

S. J. GRIGGS & CO., - 26 NORTH ERIE STREET, - TOLEDO, OHIO.
"Griggs is always on the job."

"If Goods are wanted Quick, send to Pouder."

Bee Supplies Up to Date

EQUIPMENT.—Storeroom built expressly for the business; large concrete basement with just enough moisture to prevent breakage in sections and shrinkage in dovetailed corners of supers and hives. Electric lift brings up two tons of goods to first floor in thirty seconds for shipment. Does this appeal to you?

QUALITY.—Root goods at the factory schedule of prices, whether you require one hive or a hundred. This is the quality that I have handled for nearly a quarter of a century, and the kind that you can recommend to your visiting neighbors. I MIGHT have increased my profits for a SHORT TIME by handling other goods, but I would not have remained so long in the business.

GUARANTEE.—Many articles described in my catalog can now reach you by parcel post, and I assume all responsibility in safe arrival of goods. I have the very finest tight-seal glassware for putting up extracted honey, and I guarantee safe arrival—no breakage at purchaser's loss. I have waxed-paper honey-jars that are a decided success wherever they have been used.

MY CATALOG.—My catalog describes all of these things, and contains valuable information for those who are interested. I shall be pleased to show you how promptly I can get one into your hands if you will drop me a card.

BEE SWAX.—Remember me when you have wax to offer, cash or trade, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.
873 Massachusetts Avenue

Notice to Beekeepers

Though my stock suffered severe injury in the flood, I shall be able to continue in business. A carload of brand-new goods is on the way, the railroads are again accepting and delivering freight, and you need not hesitate to send your orders here. Any thing temporarily out of stock will be sent direct from the factory where such orders will receive preferred attention.

My new location, in the Airdome building on South Sixth Street, is even more accessible than the old, and affords improved facilities for the prompt handling of orders.

The damaged stock here has been disposed of with the exception of a few odds and ends. I have been too busy to compile a list, but if you will name any item you can use in slightly damaged ware, it will be supplied if possible.

I take this opportunity to express my appreciation of the liberal patronage accorded me hitherto, and of the many kind expressions of sympathy from my friends.

E. W. Peirce, Zanesville, O.

Airdome Bldg., South Sixth St.

BEEKEEPERS

Your busy season is close at hand. Get wise, and place your orders with the supply dealer who will save you money and serve you best with Root's quality sections, frames, foundation, smokers, extractors, etc. I can serve you now without delay. My 1913 catalog tells you all about these things; besides, it contains a lot of information to those interested in bees. Special attention given to the breeding of three-banded Italian bees and queens. Catalog free.

EARL M. NICHOLS

Lyonsville, Massachusetts

Pure Golden Italian Queens

Better than Last Year

Mated, \$1.00; select mated, \$1.50; select tested, \$3.00; breeders as high as \$50.00. Send for booklet and get the best. My breeders produced over 200 pounds of surplus each last year. Try them and see what they will do for you.

Bees by the Pound

**Safe arrival guaranteed to any point
within five days from Medina, Ohio.**

We have finally perfected our pound packages so that we are now able to ship bees without combs to almost any point in the United States and nearby points in Canada without danger of transmitting bee disease of any sort. Half a pound of bees is nearly the equivalent of a two-frame nucleus; one pound, to three frames; two pounds, to six frames; three pounds, to an ordinary colony such as may be sent by express. The express on these pound packages is only about a quarter of the express on the equivalent value of bees when they are sent on combs. We shall be ready to ship bees in pound lots from Medina, with 600 colonies to draw from, by the first of June, at the following prices, without queens: Half-pound package, \$2.00; pound package, \$3.00; two-pound package, \$5.00; three-pound package, \$6.00.

Through July, and on throughout the season, the prices without queens will rule as follows: Half-pound package, \$1.00; pound package, \$1.50; two-pound package, \$2.50; three-pound package, \$3.00.

If you want queens with the pound packages, add the price of the queen selected to the price of the bees.

Express on half a pound of bees with queen, within 300 miles of Medina, will be approximately: One pound, 38 cts.; two pounds, 45 cts.; three pounds, 57 cts.

NOTE.—We can not ship bees by parcel post other than a queen-bee and a dozen or so attendants.

We have so perfected our cages for shipping bees in pound lots that we now feel for the first time that we can guarantee safe arrival at the prices named above, where bees are not on the road more than five days. As a general thing they will go through in good condition, even when out more than six days; but for the present, at least, we do not feel like assuming a greater limit than five days. Our guarantee means that, if bees fail to go through alive, or if they go through in bad order, we will either replace the shipment or send enough more bees to make up for the loss at our own expense, or refund the money. Orders will be filled in rotation after the first of June. Send in your orders now, and thus insure early delivery.

In addition we guarantee to give full measure of bees by weight. Half a pound will contain from 2200 to 2500 bees, and larger packages in proportion.

PRICES OF QUEENS.

Untested.....	June, \$1.50;	July to October, \$1.00.
Select untested.....	June, 1.75;	July to October, 1.25.
Tested.....	June, 2.50;	July to October, 2.00.
Select tested.....	June, 3.50;	July to October, 3.00.

Untested Home-bred Queens in Quantity Lots in August and September.—During August and September we are prepared to name very low prices on large quantities for requeening. Prices depend on supply available, and quoted on application.

Send all orders to the home office of The A. I. Root Co., Medina, Ohio. Orders from the extreme South will be filled from Florida and Texas; those in the extreme West, from California.

N. B.—To get the price of a package of bees and a queen, add the price of the queen selected to the price of the package.

ATTENTION!

Very important to all beekeepers all over the world who
desire to improve their native or mixed strains of bees!

THE DIRECT EXPORTATION FROM CARNIOLA OF THE
GRAY-BANDED ALPINE BEE, which until now was conducted
by the Imperial Royal Agricultural Ass'n of Carniola, the
undersigned will, IN THE FUTURE, MANAGE ON HIS OWN
ACCOUNT.

JOHANN STYGAR, Wittnach,

P. O. Wocheiner Feistritz, Upper Carniola (Krain), Austria.
Owner of 58 Honors awarded to him at various apicultural
exhibitions for his achievements as a breeder of the best
strain of Carniolans and producer of apicultural products.

ALL QUEENS TAKEN FROM FULL COLONIES, AND NOT
OVER ONE YEAR OLD. Mailed postage free. Dead select
tested queens will be replaced if returned in 24 hours after
arrival, except when they arrive in such a state in South
America or Australia. Dead select untested queens can not be
replaced. Send remittance per Intern. Money Order with
order. Safe arrival of nuclei and hives not guaranteed. Or-
ders of this kind must be accompanied by freight expenses.
The safest transport of stock is in Carniolan box hives. After
arrival or later the combs can be cut out to fit any frame.
Prices of select tested queens: March, April, May, \$5.00; June,
July, Aug., Sept., Oct., \$3.50. Select untested queens: June,
July, Aug., \$2.00. Carniolan box hives with 4 to 5 lbs. of bees,
select tested queen, brood, combs, honey, \$7.00, on board R. R.
station Wocheiner Feistritz. Write English for complete Price
List and new Booklet (which will be mailed postage free)
under above address.

CO-OPERATION means buying right and selling right.
We are a co-operative association,
and sell the best bee-supplies obtainable at the right
prices. It will pay Western beekeepers to send for our
illustrated catalog.

PHARR'S QUEENS.

We desire to thank our former patrons, and ask that,
when you are in need of Golden or three-banded Ital-
ians, you send your order to us and receive fair treat-
ment. Tested, \$1.50; untested, \$1.00. For prices on
large quantities write us. . . Breeders, \$3.00 to \$5.00.

New Century Queen Rearing Co.
Berclair, Texas

QUEENS AND BEES

An improved superior strain of Italians is what
QUIRIN RAISES. Our stock is Northern bred and
hardy—all stock being wintered on summer stands.

We sent fifty nuclei to J. D. Nixon, of Lafarge, Wis.,
and July 20th (of same year) he wrote us saying they
did just splendid, as at that date they had already filled
their supers, and that he would have to extract them.
We have files of similar testimonials.

Prices before July:	1	6	12
Select queens	\$ 1 00	\$ 5 00	\$ 9 00
Tested queens	1 50	8 00	15 00
Select tested queens	2 00	10 00	18 00
Breeders	4 00		
Golden breeders	6 00		
Two-comb nuclei, no queen ..	2 50	14 00	25 00
Three-comb nuclei, no queen ..	3 50	20 00	35 00
Colonies on 8-frames, no queen	6 00	30 00	
One pound bees, no queen ..	2 00	10 00	
Half pound bees, no queen	1 50	7 00	

Add price of queen wanted with bees. Bees by the
pound, nuclei, and colonies; if wanted before June 1,
add 25 per cent. QUEENS NOW READY. Safe delivery
and pure mating guaranteed. Over 50 years a breeder.

queens the present season. Law's Red-
clover Italians are as good as can be had.

One firm who bought over 1100 queens
from me in 1912 says, "Your queens are
very satisfactory." We are booking or-
ders now, and we are going to do our
level best to mail all queens by return
mail when so ordered. My bees are abso-
lutely clean and free from all disease.

Queens sent out under the usual guaran-
tees. Prices: Single queen, \$1; six for \$5.
Breeding queens, none better, each, \$5.

W. H. LAWS, BEEVILLE, BEE COUNTY, TEXAS

Taylor's Three-banded Italian Queens

are now Ready to go by Return Mail

POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

Elk Grove, Cal.

BEESWAX WANTED!

Recent demand for comb foundation has been good, and our stock of beeswax is running low. We offer for good average quality and prompt shipment 30 cts. per lb. cash, or 32 in trade, delivered at Medina. Shipments from the Pacific coast should be in barrels or boxes. From other Western points, pack in double bags to get the most favorable rate. Be sure to mark the shipment so it can be identified when it arrives, and send us a shipping receipt with a statement of gross, tare, and net weight shipped. This is important as it gives us something to check so as to determine whether any has been lost in transit.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, check-
ing the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE. By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 THE BEEKEEPER AND FRUIT-GROWER. A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 CATALOG OF BEEKEEPERS' SUPPLIES. Our complete catalog will be mailed free to any address on request.
- 7 SPRING MANAGEMENT OF BEES. A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oft-times perplexing matter. Price 10 cts.
- 8 HABITS OF THE HONEYBEE. By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 HOW TO KEEP BEES. A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 THE A B C OF BEE CULTURE. A complete encyclopedia of bees, of 576 pages, fully illustrated, \$2.00 postpaid; half leather, \$2.75.
- 11 GLEANINGS IN BEE CULTURE. A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 BACK-YARD BEEKEEPING. Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 THE BUCKEYE BEEHIVE, or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 ADVANCED BEE CULTURE. A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

B. here; 6, 10 cts. less each. This is the best way to increase and improve your bees. Safe arrival and satisfaction guaranteed. Circular free.

W. D. ACHORD, Fitzpatrick, Alabama.

Murray's famous North Carolina bred Italian queens (red clovers) for sale again. As good as the best; no foul brood. They are as good honey-gatherers as can be obtained, and as gentle, and winter as well. Select untested, \$9 per doz.; untested, \$8 per doz.; tested, \$1.25; select tested, \$1.50; extra select tested, \$2; breeders, \$3 and \$5.

H. B. MURRAY, Queen-breeder, Liberty, N. C.

FOR SALE.—Three-banded Italian queens and packages. Best honey-gatherers. Satisfaction or your money back. No disease. Ready about April 1. One untested queen, 75 cts.; 6 for \$4.25; 12 for \$8.00. After April 15, $\frac{1}{2}$ lb. bees, \$1.00; 1 lb., \$1.50; good weight; 1 o. b. here by express. Add price of queens if wanted. These are young bees, so will live longer than those you have wintered.

W. D. ACHORD, Fitzpatrick, Bullock Co., Ala.

There is a key to all business; and the key to successful honey-production is "good" queens. We have them, and know how to raise them. Thirty-five years' experience. Three-banded Italians. 75 cts. each; \$4.25 for 6; \$8.00 per dozen. Safe arrival and satisfaction to everybody. We handle successfully the orders of the largest producers.

THE RIALTO HONEY CO., Rialto, Cal.

FOR SALE.— $\frac{1}{2}$ lb. bees, \$1.00; 1 lb. bees, \$1.50. Add price of queen to each package Italian or Carniolan, \$1.00.

Rosedale Apiaries,
J. B. MARSHALL, Big Bend, La.

We will requeen our 2000 colonies this year with young queens bred from our best home and imported Italian stock. We offer the prolific year-old queens, removed from these hives, at 40 cts. each, \$4.20 per dozen; \$30.00 per 100. Untested queens, this year's rearing, 60 cts. each; \$6.50 per dozen; \$50 per 100. We breed for business, not looks. No disease; delivery guaranteed.

SPENCER APIARIES Co., Nordhoff, Cal.

SPECIAL NOTICES

By OUR BUSINESS MANAGER

SECOND-HAND CANS.

We have for sale a carload or more of second-hand 60-lb. cans, which we can supply at \$3.50 for 10; \$7.50 for 25, or \$25.00 per 100. There are two cans to a case. They have screw caps, are free from rust inside, and boxes are repaired where needed, and in good condition. A bargain to use for honey used in the baking trade.

BUCKWHEAT SEED.

We have a good stock of choice buckwheat for seed, both silverhull and Japanese. The season for sowing is rapidly approaching. Our price for seed, while present supply lasts, is 40 cts. per peck; 75 cts. for $\frac{1}{2}$ bushel; \$1.25 per bushel; \$2.25 for two bushels, bag included in each case. If you plan to sow any, and are not provided with seed, you had better send your order while the seed is available.

LECTURES ON BEEKEEPING.

We have arranged to continue the lectures on our roof at 10 Vine St., Philadelphia, on Tuesdays and Fridays from 11 to 12 o'clock, during May and June. Tuesdays will be devoted to instructions for beginners, handling bees, taking swarms, preparing for the honey-flow, etc. Fridays will be for advanced beekeepers, the scientific side of the transformation of nectar, the formation of wax, with some instructions as to the bacteriological side of foul brood, its contagion, etc. Kindly note that the hour is 11 to 12, on both Tuesday and Friday.

SWEET-CLOVER SEED.

We are now provided with a limited quantity of white-sweet-clover seed, both hulled and unhulled, which we offer, subject to previous sale, at the prices given in table below. We still have a fair supply of the yellow, both hulled and unhulled. We are sowing four acres of ground with the biennial yellow, and hope to be in position to report from experience as to the merits of this variety as compared with the white.

Price in lots of	1 lb.	10 lb.	25 lb.	100 lb.
Melilotus alba, biennial..				
White sweet clover, hulled	32	\$3.00	\$7.25	\$28.00
unhulled	22	2.00	4.75	18.00
Melilotus officinalis, biennial				
Yellow sweet clover, hulled	28	2.60	6.25	24.00
unhulled	21	1.90	4.50	17.00
Annual yellow, hulled....	14	1.20	2.75	10.00

Samples mailed free on request.

SWEET CLOVER AND ALFALFA MIXED.

We have just received a shipment of seed from California, which we bought for hulled white sweet clover. The U. S. government seed expert pronounces it 28 per cent white sweet clover and about 72 per cent alfalfa, with a few weed seeds in it. We offer it for 20 cts. per lb.; \$1.80 for 10 lbs.; \$16.80 per 100 lbs., bags included. We shall be pleased to submit samples if interested.

SECOND-HAND FOUNDATION MILLS.

We have to offer the following list of foundation machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, $2\frac{1}{2} \times 10$ -inch heavy hexagonal brood mill. An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0139, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0142, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in fair shape. Price \$10.00.

No. 0153, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0154, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0156, $2\frac{1}{2} \times 6$ extra-thin-super mill, fair. Price \$10.00.

No. 0157, $2\frac{1}{2} \times 6$ thin-super mill, in good condition. Price \$12.00.

No. 0160, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in good condition. Price \$12.00.

No. 0165, $2\frac{1}{2} \times 6$ hexagonal extra-thin-super mill, in fair condition. Price \$11.00.

No. 0166, $2\frac{1}{2} \times 6$ hexagonal thin-super mill in extra good condition. Price \$14.00.

No. 0167, $2\frac{1}{2} \times 6$ hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0176, $2\frac{1}{2} \times 6$ extra-thin-super mill in fair condition. Price \$12.00.

No. 0180, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in fair condition. Price \$10.00.

No. 0182, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, very good condition. Price \$20.00.

No. 0183, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, very good condition. Price \$14.00.

No. 187, 2×10 round-cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0188, 2×10 round-cell medium-brood mill, in good condition. Price \$14.00.

No. 0191, 2×10 round-cell Pelham mill in good condition for this kind of mill. The bases of the cells are not natural shape, but the walls are regular. Price \$7.00. Sample mailed free if interested.

No. 0204, 2×10 round cell medium brood mill, very good. Price \$15.00.

SPECIAL NOTICES

A. I. ROOT

SPRAYING AND SPRAYING MACHINERY, ETC.

I am just reminded that in my write-ups of the big crops of celery and tomatoes that are grown down near my Florida home I neglected to mention the importance of spraying. Once in a while somebody comes down from the North and undertakes to grow celery as it is generally done up here, paying little or no attention to proper spraying at the proper time, and when his crop all of a sudden goes to pieces from blight or something of that sort he goes back on Florida. Every truck-grower provides himself with a good apparatus—or at least the successful ones do—and the matter is attended to promptly. If I am correct about it, neighbor Root sprays even his strawberries—of course before the fruit is formed. I confess I am not very well posted about recent developments in spraying here in the North; but I believe that first-class apples that sell at gilt-edged prices are out of the question unless the spraying is attended to at the proper time and in the proper manner. You may recall that, when I made a visit to that big fruit-orchard in New Jersey, belonging to the Repp Bros., they challenged me to find a wormy apple in their hundred acres or more. I thought that surely some of the apples on the ground would show wormy cores, and I examined such apples in different places, but I did not find a wormy one. The good prices they get for their fruit is with the understanding that they never sell a wormy apple. The experiment stations of the different States are sending out bulletins; and the Department of Agriculture at Washington also furnishes information free of charge. Our advertisers, The E. C. Brown Co., Rochester, N. Y., also furnish a free book on spraying. You had better get it and become posted if you are not already.

Inclosed find \$3.00 for A B C and X Y Z of Bee Culture, and pay for GLEANINGS for the next year. Don't ever stop it, as I think a lot of GLEANINGS; and may God bless Mr. Root.

Eureka, Cal., April 2.

SPECIAL SALE!

Root's Goods Below Our Cost

Beekeepers will change their minds and use different kinds of supers all of a sudden. Our trade used, before section-supers, shipping cases, etc., while now nearly every beekeeper in our locality produces bulk comb honey, which, consequently, leaves us with a big stock of section supers on hand, which we are willing to sell very cheap just to dispose of them. They are all in the original packages, just as we received them from the factory, and there is absolutely nothing the matter with them, only we have hardly any more sale for them in our locality.

70 2 I-8.....	.37 each	60 2 P-8.....	.37 each
25 4 I-8.....	.50 each	100 4 I-10.....	.55 each
65 4 S-8.....	.50 each	80 2 I-10.....	.40 each
40 2 S-8.....	.37 each	35 4 S-10.....	.55 each
40 4 P-8.....	.50 each	75 2 S-10.....	.45 each
10,000 4 x 5 x 1 $\frac{3}{8}$ plain sections, 100 for .55; 300 for \$2.00; 1000 for \$3.70.

HONEY-CANS

As in previous seasons, we have prepared a very large and complete stock of honey-cans in our warehouse, ready for immediate shipment to you. Our honey-cans this season are the product of the largest independent can-manufacturing company in the United States, and are warranted to be the best grade possible to procure. Every can and case is fully guaranteed to give absolute satisfaction. The boxes are of the very best material that can be obtained for packing honey-cans, being strong and substantial, and securely nailed with cement-coated nails.

Prices quoted on application. Full line of Root's Beekeepers' Supplies always on hand.

PRINTYPE

Receives the Plaudits of the Public

Vigilant Protector of People's Eyesight Hailed as a Benefactor by Many Thousands of Enthusiastic Admirers. "Officer Printype" Responds with Becoming Modesty.

Officer Printype says: "I am overwhelmed by the ovation which has greeted my appearance in your midst. I am simply doing my sworn duty in ridding the Business and Financial Districts of the Bad Characters that for years have made Typewriters a menace to your eyesight. I have mercilessly exposed and relentlessly pursued these dangerous Typewriter Types, which are responsible for more cases of Defective Vision than all other causes combined.

"Report direct to my Headquarters, in the Oliver Typewriter Building, Chicago, any machine whose type is violating the Optical Law and I'll have the offender haled before the Court of Public Opinion."

Printype — OLIVER Typewriter

Printype is owned and controlled exclusively by The Oliver Typewriter Company

America rings with praise and applause for Printype. This superb new typewriter type has attracted more attention than any typewriter innovation brought out in recent years.

Hundreds of thousands of people have seen this new type and wondered what it was that made Printype Correspondence seem like a spoken message. There's virility, strength and charm in Printype correspondence. There's refinement and "class" and style.

Not because of its novelty—it's inherent in the type!

A Vast Improvement

Printype is designed in shaded letters and numerals, like the type in which books and magazines are printed. It is book type transformed and adapted to modern typewriter requirements.

This radical departure from the old style "outline" letters makes it possible to produce on *The Oliver Typewriter*, a page of manuscript as clear and attractive as that of the finest book. The Oliver is the first and only typewriter that successfully prints print!

The Primary Reason

Printype resulted from our discovery that "outline" type, with its sameness, due to absence of shading, was harmful to the eyes.

The Silent Test

For months, without any advertising, we put hundreds of Printype Oliver Typewriters into actual service, in many diverse lines of business. We wanted the public's verdict. It came in a burst of admiration and a flood of orders that proved Printype a brilliant success.

Printype letters, wherever seen, excited the keenest interest. Business men who received their first Printype letter almost invariably answered, post haste—"Where did you get that type?" Thus Printype captured the country without firing a single shot.

Price Not Advanced

The Printype Oliver Typewriter sells for \$100. You can pay at the rate of 17 cents a day. The "Printyper" is our latest and best model. The new type adds 25 per cent to the value, but not one cent to the price. A small cash payment brings the machine. (248)

Send Printype Coupon Now!

If you or any one in whom you are interested contemplate going to a Business College, write us first and we will, without charge, supply you with some very valuable information on the subject.

The Oliver Typewriter Company,
116 Prospect St., Cleveland, Ohio.

Don't Take Our Word for It!

Make sure that the **Cartercar** is all we say it is merely by questioning an owner. Be positive that the **Friction-transmission** offers the greatest Durability values by inquiring of the man who has climbed the hills and plowed through mud and sand with his **Cartercar**.

Let him tell you how he stops and starts his car, at will, with never a thought about gear-stripping. How, because of the simplicity of his **Cartercar** he isn't compelled to foot a staggering **repair bill** every once in a while. His satisfaction on being able to adjust almost everything which ever gets out of whack on his **Cartercar**.

Permit a **Cartercar** proprietor to explain why he doesn't

have to sit up nights worrying about the tire problem, because the wear and tear of sudden starting and stopping is done away with by the **Gearless-Transmission**.

Get him to tell you what a pleasure his **Cartercar** has been to his wife and the rest of the family. How through its simplicity his wife was able to drive it safely in no time.

In short, induce him to tell why the **Cartercar** is, and has been, for eleven years the choice of those who appreciate the highest standards of motor car construction.

The Touring Car sells for \$1700 and the Roadster for \$1600.

HOW FAR CAN A BEE SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think!

The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

ITALIAN BEES AND QUEENS

Extra fine, warranted, tested queen, \$1.00; untested, 75 cts.; three-frame nucleus, with queen, \$2.75. Full colonies in eight-frame Dovetailed hives, \$5.50. Try me for rush order.

J. L. FAJEN, . . . STOVER, MISSOURI

Queens reared scientifically from breeders perfected by years of elimination of all undesirable traits, are far better and more prolific than the ones hatched from a natural swarm of supersedure cells. We have the famous Moore strain of Italians, and are giving every care to the perfection of cells and mating. We have never had any disease in or near our apiary. If you are interested, write us for booklet. Untested queens, 75 cts.; dozen, \$8.00.

WALLIN & CORLIS, Brooksville, Ky.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

BOSTON.—Fancy and No. 1 white comb, 16 to 17; fancy white, 11 to 12. Beeswax, 30.
Boston, May 17. **BLAKE-LEE CO.**

KANSAS CITY.—Our market is bare of comb honey; good demand; supply of extracted is fair, light demand. We quote extracted white, per pound, 8 to 8½; extracted amber, 7 to 7½. Beeswax, 25 to 28.
C. C. CLEMONS PRODUCE CO.
Kansas City, Mo., May 21.

DENVER.—No more comb honey to offer. We quote extracted honey in a jobbing way at the following figures: White, 9; light amber, 8; strained, 6¾ to 7. We pay 28 cts. per lb. in cash and 30 in trade for clean yellow beeswax delivered here.
THE COLORADO HONEY-PRODUCERS' ASSOCIATION,
FRANK RAUCHFUSS, Manager.

INDIANAPOLIS.—Market is now practically bare of fancy white comb honey. No. 1 white is selling at 16 to 17; amber comb is in slow demand, and at varied prices. Best extracted sells at from 11 to 12 in five-gallon cans, according to quantity. Beeswax is in good demand, and producers are being paid 30 cents cash or 32 in trade.
Indianapolis, May 17. **WALTER S. POWDER.**

ZANESVILLE.—A little of last season's honey is still offered, though it is presumed this is now pretty well cleaned up. While the demand is not brisk, some sales are being made right along on comb and on extracted honey in glass packages, there being few calls for the extracted in tin. No. 1 to fancy white-clover comb brings 18 to 19; extracted, 10 to 12. For beeswax, producers are now offered 30 cts. in cash, and 32 in exchange for bee-supplies.
Zanesville, May 17. **EDMUND W. PEIRCE.**

CINCINNATI.—There is a fair supply of comb honey on the market, and we are selling our fancy double-decker comb honey at \$3.75 to \$4.00 per case; fancy extracted honey in 60-lb. cans at 9 to 10, and amber extracted honey in barrels at 6½ to 8, according to the quality and quantity purchased. For choice bright yellow beeswax we are paying 28 to 30 cts. delivered here; and if taken out in trade we allow 2 cts. per lb. more.

Cincinnati, May 23. **THE FRED W. MUTH CO.**

CHICAGO.—The market has cleaned up quite well on extracted honey during the past month, and prices remain about the same as in our previous quotation. The clover and linden brings 9 to 10 per lb. when in every sense perfect. Other white honeys 8 to 9 per lb.; amber grades from 7 to 8 per lb. No. 1 to fancy white comb honey 17 to 18 per lb. Other grades from 1 to 5 per lb. less, with very little on the market. Beeswax, 30 to 32 per lb., and in good demand.

Chicago, May 17.

R. A. BURNETT & Co.

LIVERPOOL.—There has been nothing doing in Chilean honey this month. A fair quantity is expected to arrive soon, and we think prices will fall. Sales have been made of Californian at \$9.96; New Zealand at \$10.80; Old Jamaica at \$6.24 to \$6.48, and New Jamaica at \$8.16 to \$8.64. The market is quiet. The beeswax market is very firm; no stock of Chilean on spot. A good business has been done in F. A. Q., for shipment at \$37.02 to \$40.32 per cwt., c. i. f.

Liverpool, April 30.

TAYLOR & Co.

ST. LOUIS.—Since our last, of May 2, the honey market has been in an unchanged condition. The stocks of comb honey, as well as extracted, are light, and quotations are more or less nominal. We quote fancy white comb honey at 16 to 17; No. 2 white, 15; light amber, 13 to 14. The same grades by the case, fancy white comb, \$3.65 to \$3.75; No. 2 white at \$3.25 to \$3.40; amber at \$2.75 to \$3.10, according to quality. Dark and broken honey is unsalable, as there is no demand for it. Extracted honey, Southern, in barrels and half-barrels, for choice light-amber, 6½; dark, 6; same grades in five-gallon cans generally bring half a cent more; California, Utah, and Colorado honey, white, at 9 to 9½; light amber, 8½, all in five-gallon cans. Beeswax is in good demand at 31 cents for prime; inferior and impure sell for less.

St. Louis, May 17. **R. HARTMANN PRODUCE CO.**

30 DISTRIBUTING HOUSES FOR LEWIS BEEWARE

Send for Annual Catalog which will tell you who is your nearest Distributor.

"The Busy Bee Men"

204 Walnut Street

Cincinnati, Ohio

An Active Season is Here

A carload of perfectly new goods is just on hand from the factory, and another car is expected any day, and the factory has booked us for four cars. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for swarms. Frames, and other inside fixtures too, should be put together now.

If you are wanting any special goods, orders should be made at once. Other cars are coming regularly from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

The mailing of our new catalog was completed some time ago. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder—the best in the market. Write for our catalog.

Do you want to know how to manage 3000 colonies of bees in 50 yards?

Do you want to learn modern beekeeping upon modern principles—upon principles of magnitude? Do you want to know how to Morganize beekeeping? Do you want to know how one man, by the turn of his hand, started 50 bee-yards turning honey into one modern reservoir? It was but 15 years ago, we were told, one man could find all he could profitably do with one bee-yard. Now comes this modern giant of beedom managing 50 yards that contain an aggregate of 3000 colonies.

THE BEEKEEPERS' REVIEW has made arrangements with this giant of modern methods of honey production, a method that will revolutionize the beekeeping of the future. A series of ten articles that will begin with the July number of THE BEEKEEPERS' REVIEW are from one of the very best-known writers of the day.

The only way you can secure this treat of unusual interest is to sit right down this minute and write your check for a dollar for a year's subscription to THE BEEKEEPERS' REVIEW, Northstar, Michigan; 50 cents more will make you a member of the NATIONAL for one year.

Do It Now!

Banking by Mail

is a plan which places the facilities of this strong, well-managed bank at your very door, although you may live a great many miles away.

The very simplicity of the plan commends it. Enclose your name and address with a money order, check, draft, or with currency, in a registered letter.

"Griggs Saves Your Freight"

TOLEDO

"Griggs Saves Your Freight"

is the place all successful beemen have their eyes on now. Proof is the way orders are streaming in here from all over the United States.

PROMPTNESS, LOW FREIGHT, and BEST PRICES are our motto. Satisfaction guaranteed. Think of it! our large **THREE-STORY WAREHOUSE**, right in the heart of the **CITY**, only 5 city blocks from ten of the largest **TRUNK RAILROAD SYSTEMS** in the world, and each trying to beat the other in prompt deliveries, gives us service no other agent enjoys. Even the **FACTORY** itself can't give such railroad service. This, all coupled with practical beemen to handle orders, insures against errors in packing.

WE HANDLE ROOT'S GOODS EXCLUSIVELY, and our warehouse is loaded from cellar to garret. Delays here in waiting for goods to arrive are very infrequent. Write for **SPECIAL PRICES IN QUANTITIES**, sending us a list of your wants. Free catalog for the asking. **BEEWAX** always wanted.

CHICKEN FEED OF ALL KINDS, at jobbers' prices. Car a week.

S. J. GRIGGS & CO., - 26 NORTH ERIE STREET, - TOLEDO, OHIO.

"Griggs is always on the job."

"If Goods are wanted Quick, send to Pouder."

Bee Supplies Up to Date

EQUIPMENT.— Storeroom built expressly for the business; large concrete basement with just enough moisture to prevent breakage in sections and shrinkage in dovetailed corners of supers and hives. Electric lift brings up two tons of goods to first floor in thirty seconds for shipment. Does this appeal to you?

QUALITY.—Root goods at the factory schedule of prices, whether you require one hive or a hundred. This is the quality that I have handled for nearly a quarter of a century, and the kind that you can recommend to your visiting neighbors. I MIGHT have increased my profits for a SHORT TIME by handling other goods, but I would not have remained so long in the business.

GUARANTEE.—Many articles described in my catalog can now reach you by parcel post, and I assume all responsibility in safe arrival of goods. I have the very finest tight-seal glassware for putting up extracted honey, and I guarantee safe arrival—no breakage at purchaser's loss. I have waxed-paper honey-jars that are a decided success wherever they have been used.

MY CATALOG.—My catalog describes all of these things, and contains valuable information for those who are interested. I shall be pleased to show you how promptly I can get one into your hands if you will drop me a card.

BEESWAX.—Remember me when you have wax to offer, cash or trade, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.
873 Massachusetts Avenue

Notice to Beekeepers

Though my stock suffered severe injury in the flood, I shall be able to continue in business. A carload of brand-new goods is on the way, the railroads are again accepting and delivering freight, and you need not hesitate to send your orders here. Any thing temporarily out of stock will be sent direct from the factory where such orders will receive preferred attention.

My new location, in the Airdome building on South Sixth Street, is even more accessible than the old, and affords improved facilities for the prompt handling of orders.

The damaged stock here has been disposed of with the exception of a few odds and ends. I have been too busy to compile a list, but if you will name any item you can use in slightly damaged ware, it will be supplied if possible.

I take this opportunity to express my appreciation of the liberal patronage accorded me hitherto, and of the many kind expressions of sympathy from my friends.

E. W. Peirce, Zanesville, O.

Airdome Bldg., South Sixth St.

BEEKEEPERS

Your busy season is close at hand. Get wise, and place your orders with the supply dealer who will save you money and serve you best with Root's quality sections, frames, foundation, smokers, extractors, etc. I can serve you now without delay. My 1913 catalog tells you all about these things; besides, it contains a lot of information to those interested in bees. Special attention given to the breeding of three-banded Italian bees and queens. Catalog free.

Bees by the Pound

**Safe arrival guaranteed to any point
within five days from Medina, Ohio.**

We have finally perfected our pound packages so that we are now able to ship bees without combs to almost any point in the United States and nearby points in Canada without danger of transmitting bee disease of any sort. Half a pound of bees is nearly the equivalent of a two-frame nucleus; one pound, to three frames; two pounds, to six frames; three pounds, to an ordinary colony such as may be sent by express. The express on these pound packages is only about a quarter of the express on the equivalent value of bees when they are sent on combs. We shall be ready to ship bees in pound lots from Medina, with 600 colonies to draw from, by the first of June, at the following prices, without queens: Half-pound package, \$2.00; pound package, \$3.00; two-pound package, \$5.00; three-pound package, \$6.00.

Through July, and on throughout the season, the prices without queens will rule as follows: Half-pound package, \$1.00; pound package, \$1.50; two-pound package, \$2.50; three-pound package, \$3.00.

If you want queens with the pound packages, add the price of the queen selected to the price of the bees.

Express on half a pound of bees with queen, within 300 miles of Medina, will be approximately: One pound, 38 cts.; two pounds, 45 cts.; three pounds, 57 cts.

NOTE.—We can not ship bees by parcel post other than a queen-bee and a dozen or so attendants.

We have so perfected our cages for shipping bees in pound lots that we now feel for the first time that we can guarantee safe arrival at the prices named above, where bees are not on the road more than five days. As a general thing they will go through in good condition, even when out more than six days; but for the present, at least, we do not feel like assuming a greater limit than five days. Our guarantee means that, if bees fail to go through alive, or if they go through in bad order, we will either replace the shipment or send enough more bees to make up for the loss at our own expense, or refund the money. Orders will be filled in rotation after the first of June. Send in your orders now, and thus insure early delivery.

In addition we guarantee to give full measure of bees by weight. Half a pound will contain from 2200 to 2500 bees, and larger packages in proportion.

PRICES OF QUEENS.

Untested.....	June, \$1.50;	July to October, \$1.00.
Select untested.....	June, 1.75;	July to October, 1.25.
Tested.....	June, 2.50;	July to October, 2.00.
Select tested.....	June, 3.50;	July to October, 3.00.

Untested Home-bred Queens in Quantity Lots in August and September.—During August and September we are prepared to name very low prices on large quantities for requeening. Prices depend on supply available, and quoted on application.

Send all orders to the home office of The A. I. Root Co., Medina, Ohio. Orders from the extreme South will be filled from Florida and Texas; those in the extreme West, from California.

N. B.—To get the price of a package of bees and a queen, add the price of the queen selected to the price of the package.

QUEENS!

Real queens. We have them for you. We are large producers of comb honey, operating from 500 to 1000 colonies of bees all the time. If you haven't a first-class queen you can not expect crops of honey. Would you not prefer to purchase your queens from a breeder that rears queens to make honey crops with, rather than from one who is rearing them exclusively for the market, regardless of whether they produce honey or not? We are in position to know whether our breed of three-band and golden Italians are honey-producers. We have had honey-houses at several points to exhibit our honey, always taking first prize. Walter S. Ponder, of Indianapolis,, in 1907, found three uncapped cells out of 68 24-lb. cases of fancy white honey. From others we have had letters equally good. Untested, 85 cts.; select untested, \$1.00. Waranted, \$1.10; tested, \$1.50.

Write for our large bee and queen circular for prices by the nuclei, pound, etc.

The Penn Co., Penn, Miss.
Lowndes County

Western Queens!
Three-band Long-tongued Italians

FREE.—As a special introductory offer we are giving absolutely free, with each order for 12 tested or untested queens, one select tested queen. This offer good only to June 15. Prices: Untested, 1, 90c; six, \$3.80; 12, \$9.00. Tested, 1, \$1.35, 6, \$6.50; 12, \$12.00. Virgins, 40c; 3 for \$1.00. Queens shipped on one-frame nuclei, \$1.75 extra. . . Satisfaction guaranteed. Write for our new plan. Queens made to order.

GLEN L. EVANS, GREENLEAF, IDAHO
Breeder and Importer of Fine Queens

PHARR'S QUEENS. . . .

We desire to thank our former patrons, and ask that, when you are in need of Golden or three banded Italians, you send your order to us and receive fair treatment. Tested, \$1.50; untested, \$1.00. For prices on large quantities write us. . . Breeders, \$3.00 to \$5.00.

New Century Queen Rearing Co.
Berclair, Texas

Taylor's Three-banded Italian Queens

are now Ready to go by Return Mail

We have hundreds of fine testimonials about our queens. Untested, \$1.00 each or \$9.00 a doz. Tested, \$1.25 each or \$14.00 a doz. Select tested, \$1.50 each or \$16.00 a doz. Breeders, the very best, from \$3.00 to \$5.00 each. No better queens raised. Send all orders to

J. W. Taylor & Son, Beeville, Texas

QUEENS
AND BEES

An improved superior strain of Italians is what QUIRIN RAISES. Our stock is Northern bred and hardy—all stock being wintered on summer stands.

We sent fifty nuclei to J. D. Nixon, of Lafarge, Wis., and July 20th (of same year) he wrote us saying they did just splendid, as at that date they had already filled their supers, and that he would have to extract them. We have files of similar testimonials.

Prices before July:	1	6	12
Select queens	\$ 1 00	\$ 5 00	\$ 9 00
Tested queens	1 50	8 00	15 00
Select tested queens	2 00	10 00	18 00
Breeders	4 00		
Golden breeders	6 00		
Two-comb nuclei, no queen	2 50	14 00	25 00
Three-comb nuclei, no queen	3 50	20 00	35 00
Colonies on 8-frames, no queen	6 00	30 00	
One pound bees, no queen	2 00	10 00

Add price of queen wanted with bees. Bees by the pound, nuclei, and colonies; if wanted before June 1, add 25 per cent. QUEENS NOW READY. Safe delivery and pure mating guaranteed. Over 20 years a breeder. Testimonials and circular free.

QUIRIN - THE - QUEEN - BREEDER
BELLEVUE, OHIO

W. H. LAWS

is again ready to fill your orders for queens the present season. Law's Red-clover Italians are as good as can be had.

One firm who bought over 1100 queens from me in 1912 says, "Your queens are very satisfactory." We are booking orders now, and we are going to do our level best to mail all queens by return mail when so ordered. My bees are absolutely clean and free from all disease.

Queens sent out under the usual guarantees. Prices: Single queen, \$1; six for \$5. Breeding queens, none better, each, \$5.

W. H. LAWS, BEEVILLE, BEE COUNTY, TEXAS

Miller's Strain of Red-clover ITALIAN QUEENS
By Return Mail after June 5 to 15 or order returned

Bred from superior breeders for business; gentle; no better hustlers; bees roll honey in; three-banded; Northern-bred; hardy and vigorous; winter well; not inclined to swarm; bred from best leather-colored long-tongued red-clover strains. Untested, \$1.00, six, \$5.00; dozen, \$9.00. Select untested, \$1.25; six, \$6.00; dozen, \$11.00. Satisfaction guaranteed.

Isaac F. Miller, a queen specialist and breeder for sixteen years, previously of Brookville, Rt. 2, Reynoldsville, and lately of Oil City, Rt. 2, Pa., is agent and breeder for E. L. Miller. Send all orders to

I. F. MILLER, Rt. 2, Brookville, Pa.

Notice! Queens by Return Mail, from Caraway's Prize Winning Stock.

Three-banded Italians only, at the following prices: Untested, 90 cts. each; 12 for \$9.00; 100 for \$65.00. Tested, \$1.00 each; 12 for \$10.00. I have a few fine breeders at \$5.00 each.

Two hundred two-frame nuclei: One for \$3.00; ten for \$27.50. For larger number, write for price. Also bees by the pound. One pound for \$1.50; 10 one-pound packages for \$12.50. Add to the above the price of the queen or queens desired. I guarantee nuclei and bees by the pound to arrive in fair condition within a radius of 1250 miles. Positively no disease in my apiaries.

On all queens purchased of me I guarantee them to give entire satisfaction. I use the best-known methods of rearing queens. My original stock was from Root's strain and other prominent breeders, and I keep adding imported blood to my apiaries.

I hold 92 first, 45 second, and 2 third prizes on my bees and queens and products of my apiaries. This speaks for itself. The best possible to obtain. My three-banders carried off first prize again at Dallas and Waco last fall.

I will have from 500 to 1000 mating-nuclei. I also sell nuclei. If interested write for circular and price list describing my bees and queens. It is free.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is nothern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

A. I. ROOT

GUIDE TO SEX INSTRUCTION.

The above is the title of another beautiful and exceedingly useful book for the family, by Prof. T. W. Shannon. In our issue for June 1, 1912, I gave a little notice of one of his small books—"How to Tell the Story of Life." Prof. Shannon's lifework is along this line. He has given the world something like half a dozen books on this matter of teaching the children, and warning them against the dangers that beset early manhood and womanhood along this line. The most of his books have been small ones, selling for from 15 to 25 cents. The new work, just out (1913), has 266 pages, beautifully printed on fine heavy paper, and is illustrated with some of the finest engravings that can be produced at the present time. I have given it a hasty review; and, no matter where I happen to open the book, I involuntarily thank God for giving to the world a man of such wisdom and good judgment as Prof. Shannon, to talk to the people of this present age.

It is some years since our friend took up this matter of sexual matters in the home; and the conviction forces itself on me that he has been in touch and consultation with the best and wisest humanitarians of the present day. I have repeatedly called attention to the fact that, while we are giving the greatest attention just now to improvements in growing corn and potatoes, horses and cattle, not to neglect poultry, until just recently but very little attention has been given, comparatively, to growing better boys and girls than the world ever saw before. When I say better I do not refer entirely to physical improvement. Just now it begins to dawn on the intelligence of the world the importance of encouraging purity, righteousness, and godliness, and discouraging crime and criminals. The Men's Brotherhood of our Congregational Church have just taken up this matter; and a Y. M. C. A. man of excellent authority told us last Sunday that two-thirds of the blind people in the United States need not have been "born blind," and that the blind babies that are coming into the world are the direct result of ignorance and crime along the lines that Prof. Shannon takes up.

The price of this book is \$1.50, and it can be had of the S. A. Mullikin Co., Marietta, Ohio.

SPECIAL NOTICES

By OUR BUSINESS MANAGER

SECTION-BOXES.

While we have been crowded with orders for hives and supplies of all kinds, and our stock of most articles is badly depleted, we still have a large stock of choice sections which we can ship on first train after receipt of order. If you have a good honey-flow, and need more sections, remember we are in shape to furnish them promptly.

SWEET CLOVER AND ALFALFA MIXED.

We have just received a shipment of seed from California, which we bought for hulled white sweet clover. The U. S. government seed expert pronounces it 28 per cent white sweet clover and about 72 per cent alfalfa, with a few weed seeds in it. We offer it for 20 cts. per lb.; \$1.80 for 10 lbs.; \$16.80 per 100 lbs., bags included. We shall be pleased to submit samples if interested.

BUCKWHEAT SEED.

We have a good stock of choice buckwheat for seed, both silverhull and Japanese. The season for sowing is rapidly approaching. Our price for seed, while present supply lasts, is 40 cts. per peck; 75 cts. for $\frac{1}{2}$ bushel; \$1.25 per bushel; \$2.25 for two bushels, bag included in each case. If you plan to sow any, and are not provided with seed, you had better send your order while the seed is available.

SECOND-HAND CANS.

There is still an opportunity to get some of those good second-hand 60-lb. honey-cans. As a rule we do not recommend second-hand cans for good honey; but these are selected, all questionable ones being thrown on the dump, and only those which we know to be sound and free from rust inside are saved. For amber or off grades of honey these should be just as good as new cans. Price: \$3.50 for 10 cases of two cans each; \$7.50 for 25 cases; \$25.00 for 100 cases.

LECTURES ON BEEKEEPING.

We have arranged to continue the lectures on our roof at 10 Vine St., Philadelphia, on Tuesdays and Fridays from 11 to 12 o'clock, during May and June. Tuesdays will be devoted to instructions for beginners, handling bees, taking swarms, preparing beekeepers, the scientific side of the transformation of nectar, the formation of wax, with some instructions to the bacteriological side of foul brood, its contagion, etc. Kindly note that the hour is 11 to 12, on both Tuesday and Friday.

BEESEX WANTED.

During the first four months of this year we have used eighty thousand pounds of beeswax against fifty thousand in the same period a year ago. Others who use beeswax for foundation have also used an increased amount, and as a result, there is a shortage of available supplies which is becoming acute. If any of our readers have any wax or old combs from which to make some, they will not soon find a better market than exists at present. The rush for this season will be past in four to six weeks, so that you should lose no time in making shipment of any available supply. We are prepared to pay any reasonable price—as much as you are likely to get any where. Let us hear from you if you have any to furnish.

Convention Notices

There will be a field meeting of the New Jersey Beekeepers' Association at the apiary of Geo. Grover, near Trenton, on the Trenton-Lawrence trolley, June 25, 1913. Program later.

New Egypt, N. J., May 13. E. G. CARR, Sec.

Kind Words from our Customers

LOOKING FORWARD TO THE 100TH BIRTHDAY.

My interest in the magazine holds because of Our Homes, Poultry, and Gardening, and especially because these are from the mind and pen of one of my own age, and who, like me, is expecting to round out at least one hundred years of life worth living. I shall be 73 April 9. I am thinking (though not yet invited) to be somewhere around in some capacity when Mr. A. I. Root and Mr. T. B. Terry are eating their birthday dinners. There will be no flesh of any kind in mine, nor coffee nor tea nor other similar poisons. I abandoned the use of coffee and tea in 1874; of cigars later, and flesh later, but a good while ago. Not since Nov. 1, 1886, when I rallied from a dreadful illness and a pulse of 160, have I consulted a physician or taken any medicine for sickness. Foods wisely chosen, eaten, or denied, have kept me pretty well balanced. Because of these experiences, and the fact that Mr. Root is somewhat like-minded, I want to keep up with his sayings in GLEANINGS.

Dudley, N. C., Feb. 26.

R. B. JOHNS.

BUY YOUR FURNACE \$10 DOWN \$10 A MONTH

This No. 1 Jahan Down-Drift Furnace (weight over 1000 lbs.) as it stands \$48.00 cash, delivered east of Omaha and north of Ohio River.

Our monthly payment plan of selling direct saves you the dealer's profits and charges for installation. The

SPECIAL SALE!

Root's Goods Below Our Cost

Beekeepers will change their minds and use different kinds of supers all of a sudden. Our trade used, before section-supers, shipping cases, etc., while now nearly every beekeeper in our locality produces bulk comb honey, which, consequently, leaves us with a big stock of section supers on hand, which we are willing to sell very cheap just to dispose of them. They are all in the original packages, just as we received them from the factory, and there is absolutely nothing the matter with them, only we have hardly any more sale for them in our locality.

70 2 I-8.....	.37 each	60 2 P-8.....	.37 each
25 4 I-8.....	.50 each	100 4 I-10.....	.55 each

HONEY-CANS

As in previous seasons, we have prepared a very large and complete stock of honey-cans in our warehouse, ready for immediate shipment to you. Our honey-cans this season are the product of the largest independent can-manufacturing company in the United States, and are warranted to be the best grade possible to procure. Every can and case is fully guaranteed to give absolute satisfaction. The boxes are of the very best material that can be obtained for packing honey-cans, being strong and substantial, and securely nailed with cement-coated nails.

Prices quoted on application. Full line of Root's Beekeepers' Supplies always on hand.

PRINTYPE

Receives the Plaudits of the Public

Vigilant Protector of People's Eyesight Hailed as a Benefactor by Many Thousands of Enthusiastic Admirers. "Officer Printype" Responds with Becoming Modesty.

Officer Printype says: "I am overwhelmed by the ovation which has greeted my appearance in your midst. I am simply doing my sworn duty in ridding the Business and Financial Districts of the Bad Characters that for years have made Typewriters a menace to your eyesight. I have mercilessly exposed and relentlessly pursued these dangerous Typewriter Types, which are responsible for more cases of Defective Vision than all other causes combined.

"Report direct to my Headquarters, in the Oliver Typewriter Building, Chicago, any machine whose type is violating the Optical Law and I'll have the offender haled before the Court of Public Opinion."

Printype — **OLIVER** Typewriter

Printype is owned and controlled exclusively by The Oliver Typewriter Company

America rings with praise and applause for Printype. This superb new typewriter type has attracted more attention than any typewriter innovation brought out in recent years.

Hundreds of thousands of people have seen this new type and wondered what it was that made Printype Correspondence seem like a spoken message. There's virility, strength and charm in Printype correspondence. There's refinement and "class" and style.

Not because of its novelty—it's inherent in the type!

A Vast Improvement

Printype is designed in shaded letters and numerals, like the type in which books and magazines are printed. It is book type transformed and adapted to modern typewriter requirements.

This radical departure from the old style "outline" letters makes it possible to produce on *The Oliver Typewriter*, a page of manuscript as clear and attractive as that of the finest book. The Oliver is the first and only typewriter that successfully prints print!

The Primary Reason

Printype resulted from our discovery that "outline" type, with its sameness, due to absence of shading, was harmful to the eyes.

The Silent Test

For months, without any advertising, we put hundreds of Printype Oliver Typewriters into actual service, in many diverse lines of business. We wanted the public's verdict. It came in a burst of admiration and a flood of orders that proved Printype a brilliant success.

Printype letters, wherever seen, excited the keenest interest. Business men who received their first Printype letter almost invariably answered, post haste—*"Where did you get that type?"* Thus Printype conquered the country without firing a single shot.

Price Not Advanced

The Printype Oliver Typewriter sells for \$100. You can pay at the rate of 17 cents a day. The "Printyper" is our latest and best model. The new type adds 25 per cent to the value, but not one cent to the price. A small cash payment brings the machine. (248)

Send Printype Coupon Now!

If you or any one in whom you are interested contemplate going to a Business College, write us first and we will, without charge, supply you with some valuable information on the subject.

ROOT'S BEEKEEPERS' SUPPLIES . . .

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequently letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation, this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1913.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

HOW FAR CAN A BEE

SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think! The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 2.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 3.—Three-fourths of the total surface must be filled and sealed.

No. 4.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—Fancy and No. 1 white comb, 16 to 17; fancy white, 11 to 12. Beeswax, 30.

Boston, June 6.

BLAKE-LEE CO.

INDIANAPOLIS.—Market is now practically bare of fancy white comb honey. No. 1 white is selling at 16 to 17; amber comb is in slow demand, and at varied prices. Best extracted sells at from 11 to 12 in five-gallon cans, according to quantity. Beeswax is in good demand, and producers are being paid 30 cents cash or 32 in trade.

Indianapolis, June 6.

WALTER S. POWDER.

ZANESVILLE.—As the supply trade is now on in full force the honey business is in a measure in the background. So far no receipts of new crop are reported, and old stocks are pretty well depleted. Best grades of white comb still command 18 to 19 cents; white extracted, 10 to 11. For beeswax, producers are receiving 29 to 30 cts. cash; two cents more in exchange for bee supplies.

Zanesville, June 9.

EDMUND W. PEIRCE.

NEW YORK.—There is nothing new to report. Some few little straggling lots of comb honey are still arriving, and selling at from 14 to 16 for No. 1 and fancy white, lower grades at from 12 to 13. Extracted is quiet. Heavy shipments are arriving from the West Indies, and as the demand is dull, prices are declining. We are now receiving new Southern honey, and the demand for this also has been very quiet up to now. Beeswax steady at 30 to 31.

New York, June 5.

HILDBRETH & SEGELKEN.

Cincinnati, Ohio

An Active Season is Here

A carload of perfectly new goods is just on hand from the factory, and another car is expected any day, and the factory has booked us for four cars. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for swarms. Frames, and other inside fixtures too, should be put together now.

If you are wanting any special goods, orders should be made at once. Other cars are coming regularly from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

The mailing of our new catalog was completed some time ago. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder—the best in the market. Write for our catalog.

Honey reports continued from page 2.

CHICAGO.—Very little doing in honey of any kind. Some No. 1 to fancy white comb honey would sell readily on this market at 17 to 18 cts. per lb. Beeswax also unchanged.

Chicago, June 4.

R. A. BURNETT & Co.

DENVER.—No more comb honey to offer. We quote extracted honey in a jobbing way at the following figures: White, 9; light amber, 8; strained, 6¾ to 7. We pay 28 cts. per lb. in cash and 30 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION,
Denver, June 6. F. RAUCHFUSS, Manager.

ST. LOUIS.—Since our last we have nothing new to report in the honey market. Trade is limited, and the prices are nominal as quoted heretofore. We quote fancy white comb honey at 16 to 17; No. 2 white, 15; light amber, 13 to 14; by the case, fancy white comb honey, \$3.65 to \$3.75; No. 2 white, \$3.25 to \$3.40; amber, \$2.75 to \$3.10, according to quality. Dark or broken honey is unsalable. Extracted honey, Southern, in barrels and half-barrels, for choice light amber, 6½; dark, 6; in five-gallon cans, one-half cent higher for the better grades. Dark honey is not wanted in five-gallon cans. California, Utah, and Colorado honey, white, brings 9 to 9½; light amber, 8½, all in five-gallon cans. Beeswax is in good demand at 31½ cents for prime; inferior and impure sells for less.

St. Louis, June 6. R. HARTMANN PRODUCE CO.

ANNUAL TRAVEL MAGAZINE; "WATERWAY TALES"
PUBLISHED BY D. & C. LINE, SENT TO YOU FREE.

POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

RUSH ORDERS

BY MAIL.—Has your "forgettery" been working? And right this minute you need foundation or other items. See page 1 of our catalog, and it gives parcel-post rates on various articles.

BY EXPRESS.—Larger shipments than can go by mail we can rush out at once. Parcel-post and express orders receive our first attention.

BY FREIGHT.—Our rule is "ship same day the order is received," and we break it only when absolutely necessary. Notice that Lansing is the railroad center of Michigan from which freight shipments can be delivered quickest.

And we fill all orders with Root's goods. Just remember that too. Send for catalog. Beeswax wanted.

M. H. HUNT & SON, LANSING, MICH.

"Griggs Saves Your Freight"

TOLEDO

"Griggs Saves Your Freight"

is the place all successful beemen have their eyes on now. Proof is the way orders are streaming in here from all over the United States.

PROMPTNESS, LOW FREIGHT, and BEST PRICES are our motto. Satisfaction guaranteed. Think of it! our large **THREE-STORY WAREHOUSE**, right in the heart of the **CITY**, only 5 city blocks from ten of the largest **TRUNK RAILROAD SYSTEMS** in the world, and each trying to beat the other in prompt deliveries, gives us service no other agent enjoys. Even the **FACTORY** itself can't give such railroad service. This, all coupled with practical beemen to handle orders, insures against errors in packing.

WE HANDLE ROOT'S GOODS EXCLUSIVELY, and our warehouse is loaded from cellar to garret. Delays here in waiting for goods to arrive are very infrequent. Write for **SPECIAL PRICES** IN QUANTITIES, sending us a list of your wants. Free catalog for the asking. **BEESWAX** always wanted.

CHICKEN FEED OF ALL KINDS, at jobbers' prices. Car a week.

S. J. GRIGGS & CO., - 26 NORTH ERIE STREET, - TOLEDO, OHIO.

"Griggs is always on the job."

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

When you are in urgent need of bee supplies you will likely consider two details—quality and promptness. For about a quarter of a century I have handled the Root quality of goods, shipping from Indianapolis at the factory schedule of prices. I believe it is generally admitted that as to material, workmanship, and accuracy, their equal is not to be had elsewhere. An immense stock on hand at all times, and no old or inferior goods offered at any price. Nearly every order is filled within a few hours after arrival, and you will agree with me that this feature is the finest advertising that I have ever been able to place on my house. We have so many railroads and express companies at our command that shipping promptly from here is not a hardship. The parcel post is a boon to all of us, and these packages are taken up by Uncle Sam three times a day.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and I should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

873 Massachusetts Avenue

Notice to Beekeepers

My new location in the Airdome building on South Sixth St. is even more accessible than my former location, and affords improved facilities for the prompt handling of orders.

I now have as fair a line of brand-new goods as the crowd of orders at the Root factory will allow.

The damaged stock here has been disposed of with the exception of a few odds and ends. I have been too busy to compile a list; but if you will name any item you can use in slightly damaged ware, it will be supplied if possible.

I take this opportunity to express my appreciation of the liberal patronage accorded me hitherto, and of the many kind expressions of sympathy from my friends.

E. W. Peirce, Zanesville, O.

Airdome Bldg., South Sixth St.

BEEKEEPERS

Your busy season is close at hand. Get wise, and place your orders with the supply dealer who will save you money and serve you best with Root's quality sections, frames, foundation, smokers, extractors, etc. I can serve you now without delay. My 1913 catalog tells you all about these things; besides, it contains a lot of information to those interested in bees. Special attention given to the breeding of three-banded Italian bees and queens. Catalog free.

LEWIS HIVES ARE BUILT LIKE FURNITURE ARE PERFECT IN ALL RESPECTS

Send for Annual Catalog which will tell you who is your nearest Distributer. G. B. Lewis Company, Watertown, Wis.

ROOT'S BEEKEEPERS' SUPPLIES . . .

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequent letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1912.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in the line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

QUEENS!

Real queens. We have them for you. We are large producers of comb honey, operating from 500 to 1000 colonies of bees all the time. If you haven't a first-class queen you can not expect crops of honey. Would you not prefer to purchase your queens from a breeder that rears queens to make honey crops with, rather than from one who is rearing them exclusively for the market, regardless of whether they produce honey or not? We are in position to know whether our breed of three-band and golden Italians are honey-producers. We have had honey-houses at several points to exhibit our honey, always taking first prize. Walter S. Pouder, of Indianapolis, in 1907, found three uncapped cells out of 68 24-lb. cases of fancy white honey. From others we have had letters equally good. Untested, 85 cts.; select untested, \$1.00. Warranted, \$1.10; tested, \$1.50.

Write for our large bee and queen circular for prices by the nuclei, pound, etc.

Add price of queen wanted with bees. Bees by the pound, nuclei, and colonies; if wanted before June 1, add 25 per cent. **QUEENS NOW READY**. Safe delivery and pure mating guaranteed. Over 20 years a breeder. Testimonials and circular free.

QUIRIN - THE - QUEEN - BREEDER
BELLEVUE, OHIO

W. H. LAWS

is again ready to fill your orders for queens the present season. Law's Red-clover Italians are as good as can be had.

One firm who bought over 1100 queens from me in 1912 says, "Your queens are very satisfactory." We are booking orders now, and we are going to do our level best to mail all queens by return mail when so ordered. My bees are absolutely clean and free from all disease.

Queens sent out under the usual guarantees. Prices: Single queen, \$1; six for \$5. Breeding queens, none better, each, \$5.

W. H. LAWS, BEEVILLE, BEE COUNTY, TEXAS

Taylor's Three-banded Italian Queens

are now Ready to go by Return Mail

We have hundreds of fine testimonials about our queens. Untested, \$1.00 each or \$9.00 a doz. Tested, \$1.25 each or \$14.00 a doz. Select tested, \$1.50 each or \$16.00 a doz. Breeders, the very best, from \$3.00 to \$5.00 each. No better queens raised. Send all orders to

J. W. Taylor & Son, Beeville, Texas

Queens reared scientifically from breeders perfected by years of elimination of all undesirable traits, are far better and more prolific than the ones hatched from a natural swarm of superseded cells. We have the famous Moore strain of Italians, and are giving every care to the perfection of cells and mating. We have never had any disease in or near our apiary. If you are interested, write us for booklet. Untested queens, 75 cts.; dozen, \$8.00.

WALLIN & CORLIS, Brooksville, Ky.

Swarming is Here!

Are you prepared for the increase? Be forehanded, and have your hives all ready. We carry a large line of hives and other goods. Our catalog for 1913 will be sent on request.

Sections and Foundation

A half million sections on hand, and a ton or more foundation ready for instant shipment.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, checking the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 **MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **THE BEEKEEPER AND FRUIT-GROWER.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 **CATALOG OF BEEKEEPERS' SUPPLIES.** Our complete catalog will be mailed free to any address on request.
- 7 **SPRING MANAGEMENT OF BEES.** A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oftentimes perplexing matter. Price 10 cts.
- 8 **HABITS OF THE HONEYBEE.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **HOW TO KEEP BEES.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **THE A B C OF BEE CULTURE.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$2.00 postpaid; half leather, \$2.75.
- 11 **GLEANINGS IN BEE CULTURE.** A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 **BACK-YARD BEEKEEPING.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 **THE BUCKEYE BEEHIVE,** or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 **ADVANCED BEE CULTURE.** A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

J. W. K. SHAW & CO.,
Loreauville, Iberia Parish, Louisiana.

Miller's Strain of Red-clover ITALIAN QUEENS

By Return Mail after June 5 to 15 or order returned

Bred from superior breeders for business; gentle; no better hustlers; bees roll honey in; three-banded; **Northern-bred**: hardy and vigorous; winter well; not inclined to swarm; bred from best leather-colored long-tongued red-clover strains. Untested, \$1.00, six, \$5.00; dozen, \$9.00. Select untested, \$1.25; six, \$6.00; dozen, \$11.00. Satisfaction guaranteed.

Isaac F. Miller, a queen specialist and breeder for sixteen years, previously of Brookville, Rt. 2, Reynoldsville, and lately of Oil City, Rt. 2, Pa., is agent and breeder for E. L. Miller. Send all orders to

I. F. MILLER, Rt. 2, Brookville, Pa.

Pure Golden Italian Queens

Better than Last Year

Mated, \$1.00; select mated, \$1.50; select tested, \$3.00; breeders as high as \$50.00. Send for booklet, and get the best . . . My breeders produced over 200 pounds of surplus each last year. Try them and see what they will do for you.

GEO. M. STEELE, 30 So. 40th St., Philadelphia, Pa.

BEESWAX WANTED!

Recent demand for comb foundation has been good, and our stock of beeswax is running low. We offer for good average quality and prompt shipment 30 cts. per lb. cash, or 32 in trade, delivered at Medina. Shipments from the Pacific coast should be in barrels or boxes. From other Western points, pack in double bags to get the most favorable rate. Be sure to mark the shipment so it can be identified when it arrives, and send us a shipping receipt with a statement of gross, tare, and net weight shipped. This is important as it gives us something to check so as to determine whether any has been lost in transit.

The A. I. Root Company
Medina, Ohio

Convention Notices

The field meeting of the New Jersey State Beekeepers' Association will be held at the apiary of Mr. George Grover, near Trenton, N. J., June 25. The following is the program:

Reading of minutes.

The Improved Robber Cloth—*Demonstrated*, Dr. Cheney, Hoboken.

The Tube Escape and its Uses—*Demonstrated*, W. W. Case, Frenchtown.

Question-box.

Short Cuts in Finding Queens—*Demonstrated*, I. J. Stringham, New York; Dr. Cheney, Hoboken; C. H. Root, Red Bank.

My Winter Case and its Advantages, C. H. Root, Red Bank.

It is quite possible that Dr. Phillips will also be present, and talk on a live subject.

The main features of this meeting are to be the demonstrations and discussions.

Plans are being made to have the latest Ferguson uncapper demonstrated.

Lunch will be served at the apiary at a reasonable cost.

Trenton can be reached by the P. R. R., P. & R. R., and trolleys. The apiary is 20 minutes' trolley ride from State and Broad Sts., Trenton, on the Trenton-Lawrenceville line. Get off at Fairfield Ave., and follow the signs. Cars leave Trenton every 20 minutes.

New Egypt, N. J.

E. G. CARR, Sec.

The pound of bees and queen I purchased of you last July are coming along very nicely. They filled almost five Hoffman frames last fall, and wintered out on their summer stands. They are very gentle compared with the hybrids which I had.

St. Benedict, Pa.

W. H. BAUGHMAN.

B. here; 6, 10 cts. less each. This is the best way to increase and improve your bees. Safe arrival and satisfaction guaranteed. Circular free.

W. D. ACHORD, Fitzpatrick, Alabama.

Three-banded Italian queens and bees. Untested queens, 75 cts. each; six, \$4.25; twelve, \$8.00; tested, \$1.25 each; six, \$7.00; twelve, \$12.00. For select queens, add 25 cts. each to the above prices. Nuclei without queens, one-frame, \$1.50; two-frame, \$2.50; three-frame, \$3.00. For nuclei in quantity lots, and bees by the pound, write for prices and circular. ROBT B. SPICER, Wharton, N. J.

FOR SALE.—Three-banded Italian queens and packages. Best honey-gatherers. Satisfaction or your money back. No disease. Ready about April 1. One untested queen, 75 cts.; 6 for \$4.25; 12 for \$8.00. After April 15, ½ lb. bees, \$1.00; 1 lb., \$1.50; good weight; f. o. b. here by express. Add price of queen if wanted. These are young bees, so will live longer than those you have wintered.

W. D. ACHORD, Fitzpatrick, Bullock Co., Ala.

We will requeen our 2000 colonies this year with young queens bred from our best home and imported Italian stock. We offer the prolific year-old queens, removed from these hives, at 40 cts. each, \$4.20 per dozen; \$30.00 per 100. Untested queens, this year's rearing, 60 cts. each; \$6.50 per dozen; \$50 per 100. We breed for business, not looks. No disease; delivery guaranteed.

SPENCER APIARIES, Nordhoff, Cal.

Murray's famous North Carolina bred Italian queens (red clovers and goldens), for sale again. As good as the best; no foul brood known. They are as good honey-gatherers as can be obtained, and winter as well. My improved strain is carefully selected, and bred up from Moore's, Root's, and Davis' imported stock. Select untested, doz., \$9.00; one, \$1.00. Untested, one, 75 cts.; doz., \$8.00; tested, \$1.25. Select tested, \$1.50; extra select tested, \$2.00. Breeders, \$3.00 and \$5.00.

H. B. MURRAY, Queen-breeder, Liberty, N. C.

FOR SALE.—50 colonies of Italian bees; 60 new ten-frame hives and 300 frames, new and wired; one two-frame extractor; one extracting-house and fixtures, together with 250 acres of land, 100 or more open for cultivation; remainder is well covered with mesquite, catclaw, horsemint, and wild sunflower; in the midst of a large cotton-growing section; good well and windmill; house and outbuildings; all for \$50 per acre, or will sell the bees and fixtures for \$6 per stand. For further particulars address J. B. BOWDEN, Fall City, Texas.

MISCELLANEOUS

White and brown ferrets. Stamp for description and prices. JEWELL'S FERRET KENNELS, Spencer, O.

Fine mated homing pigeons, \$1.50 a pair, or will trade for bees. L. FRANCISCO, Mosinee, Wis.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

A. I. ROOT

VENTILATED SHOES, ETC.

After what I said about my "corncrib shoes" in GLEANINGS, p. 319, May 1, a lot of correspondence has come up, and I have been advised several times that similar shoes are for sale in most of the shoestores in our large towns and cities. Dr. Miller alludes to the matter on page 264, June 1. The principal objection that I have found so far to these shoes is that, when working in the garden or doing other similar kinds of work, dirt or small gravel is liable to get into these openings and oblige one to sit down once in a while and give his shoes and stockings a thorough cleaning. While walking on a pavement or on any fairly good road, there is no trouble of this kind. Putting on some different shoes when you are working in the garden, or, better still, going *barefoot*, makes it all right. If some shoe manufacturer who makes or handles these ventilated shoes will give us his address we will give him a free advertisement, and I think it will bring him a lot of trade, for there seems to be a world of people who are suffering from corns and hot feet, especially during hot weather, because their feet do not have a chance to "breathe." I have before mentioned that our great statesman Abraham Lincoln was in the habit of taking off his shoes when he sat down at his desk or attended to correspondence. The shoes I have mentioned came from R. T. Thomas' Sons, the drygoods men of Bradentown, Fla. The price was \$2.50 or \$3.50. I can not tell now just which. In these days of parcel post some manufacturer should be able to send them by mail at a reasonable price.

Later.—The following has been sent me by a subscriber. It was clipped from the *Chicago Inter-Ocean*:

CANAL ZONE FOOTWEAR.

The rope-soled slippers, with cloth uppers, known as Spanish alpargatas, and worn by practically all the European and colored laborers in the canal zone, are imported all the way from Spain in such quantities that they can be retailed at the low price of 20 cents a pair.

The European laborer wears them 12 months in the year on the isthmus, and over 1,000,000 pairs are sold annually by the commissary. Alpargatas are durable, and have been adopted by Isthmian bathers as the most convenient form of beach shoe.

Can some of our readers tell us where these Spanish alpargatas can be had? I for one want a dozen pairs at the above prices; then when I get them soiled or muddy I can throw them away and take another pair. I take it they can be sent by parcel post.

DASHEENS, DASHEEN FLOUR, ETC.

I told you last winter when I got that little bag of dasheen tubers by parcel post on Christmas eve I was happier over that little Christmas present from Uncle Samuel himself, than with any other Christmas present I could remember during the past seventy years. Well, now here comes another of my "happy surprises." Read the following:

UNITED STATES DEPARTMENT OF AGRICULTURE

BUREAU OF PLANT INDUSTRY

FOREIGN SEED AND PLANT INTRODUCTION

Washington, D. C., May 17, 1913.

Mr. A. I. Root, Bradentown, Fla.:

We are sending to you to-day separately by mail a small package of flour made from the dasheen, the sub-tropical root crop which the Department is introducing into the Southern States. We shall be glad to have you try this flour in one or more of the ways suggested in the recipes which accompany it, and let us know your opinion of it.

Very truly yours,

R. A. YOUNG, Scientific Assistant.

Well, friends, the reason I can not report on the dasheen flour in this issue is that it was sent, as you will notice above, to Bradentown, Fla., instead of Medina, Ohio. But I hope to get hold of the package, or a similar one, so I can report in the next issue. I have thirty or forty dasheen plants growing in my garden here in Ohio; but owing to the very cold May, and June so far, they are not making much progress. Last night, June 9, we had quite a little frost, and the Weather Bureau reports it as the coldest June 9th in 42 years, or since the Weather Bureau was started. Well, the dasheens stood as much frost as the tomato plants near by, and they stood a little more than some Hubbard squashes also near by; for while the squashes were killed dead, the dasheens were only a very few of them "singed" a little.

SPECIAL NOTICES

By OUR BUSINESS MANAGER

SCALES FOR WEIGHING COMB HONEY IN GRADING.

Under the Colorado rule is taken into account; and also by the laws of an increasing number of States packages of food must be marked with the net weight. For both these ends some form of spring scale is quickest to operate and handiest to use. We show above the Invincible No. 2, which is nickel plate with scoop, which is a very convenient form, and the one used by the Colorado Association; capacity, 2 lbs. We can furnish this at \$1.50 each; weight scant two pounds. Will mail it anywhere reached by parcel post at \$1.70 prepaid.

Here is another still smaller and very convenient for weighing individual sections or any thing else which does not exceed a pound. This is primarily

made for a postal scale, and the dial is graduated for different classes of mail matter, giving the amount of postage required in each class, as well as the weight by half-ounces in the large central figures. Price \$1.25. By mail \$1.30. Weight 9 oz.

SLANTING-DIAL SPRING SCALES.

We have sold for a great many years the Favorite Family scales of 12, 24, and 48 lb. capacity, and they have served a good purpose for light family weighing. Recently we discovered an improved form of this scale with slanting dial as shown above. This form of dial is much more convenient for reading when in the ordinary position on a counter or table. There are other improvements in this scale of equal importance. With the Favorite it was important to place centrally on the platform the article to be weighed if you wished to be quite accurate. With the Perfection slanting dial scale the weight is the same whether the article is central or at the edge. The price of the new scale is also lower. Either 12 or 24 lb. Perfection scale with silver-finished dial and black enameled frame and platform for \$1.50. Weight 3 lbs. May be sent parcel post.

"ABLE TO SAVE."

I have been permitted lately to read a few copies of GLEANINGS. I am not in the bee business, but your Home department and the way you hit whisky and the tobacco business just suits me. I thank God there is now and then a man who will stand by his convictions and is able to testify to the sanctifying power of God to save, and keeping a man saved, through faith in Jesus.

Dunbarton, Wis., Jan. 31. JAS. R. PERRIGO.

SPECIAL SALE!

Root's Goods Below Our Cost

Beekeepers will change their minds and use different kinds of supers all of a sudden. Our trade used, before section-supers, shipping cases, etc., while now nearly every beekeeper in our locality produces bulk comb honey, which, consequently, leaves us with a big stock of section supers on hand, which we are willing to sell very cheap just to dispose of them. They are all in the original packages, just as we received them from the factory, and there is absolutely nothing the matter with them, only we have hardly any more sale for them in our locality.

70 2 I-8.....	.37 each	60 2 P-8.....	.37 each
25 4 I-8.....	.50 each	100 4 I-10.....	.55 each
65 4 S-8.....	.50 each	80 2 I-10.....	.40 each
40 2 S-8.....	.37 each	35 4 S-10.....	.55 each
40 4 P-8.....	.50 each	75 2 S-10.....	.45 each
10,000 4 x 5 x 1 $\frac{3}{8}$ plain sections, 100 for .55; 300 for \$2.00; 1000 for \$3.70.			

SHIPPING-CASES

HONEY-CANS

As in previous seasons, we have prepared a very large and complete stock of honey-cans in our warehouse, ready for immediate shipment to you. Our honey-cans this season are the product of the largest independent can-manufacturing company in the United States, and are warranted to be the best grade possible to procure. Every can and case is fully guaranteed to give absolute satisfaction. The boxes are of the very best material that can be obtained for packing honey-cans, being strong and substantial, and securely nailed with cement-coated nails.

Prices quoted on application. Full line of Root's Beekeepers' Supplies always on hand.

PRINTYPE

Receives the Plaudits of the Public

Vigilant Protector of People's Eyesight Hailed as a Benefactor by Many Thousands of Enthusiastic Admirers. "Officer Printype" Responds with Becoming Modesty.

Officer Printype says: "I am overwhelmed by the ovation which has greeted my appearance in your midst. I am simply doing my sworn duty in ridding the Business and Financial Districts of the Bad Characters that for years have made Typewriters a menace to your eyesight. I have mercilessly exposed and relentlessly pursued these dangerous Typewriter Types, which are responsible for more cases of Defective Vision than all other causes combined.

"Report direct to my Headquarters, in the Oliver Typewriter Building, Chicago, any machine whose type is violating the Optical Law and I'll have the offender haled before the Court of Public Opinion."

Printype — OLIVER Typewriter

Printype is owned and controlled exclusively by The Oliver Typewriter Company

America rings with praise and applause for Printype. This superb new typewriter type has attracted more attention than any typewriter innovation brought out in recent years.

Hundreds of thousands of people have seen this new type and wondered what it was that made Printype Correspondence seem like a spoken message. There's virility, strength and charm in Printype correspondence. There's refinement and "class" and style.

Not because of its novelty—it's inherent in the type!

A Vast Improvement

Printype is designed in shaded letters and numerals, like the type in which books and magazines are printed. It is book type transformed and adapted to modern typewriter requirements.

This radical departure from the old style "outline" letters makes it possible to produce on *The Oliver Typewriter*, a page of manuscript as clear and attractive as that of the finest book. The Oliver is the first and only typewriter that successfully prints print!

The Primary Reason

Printype resulted from our discovery that "outline" type, with its sameness, due to absence of shading, was harmful to the eyes.

The Silent Test

For months, without any advertising, we put hundreds of Printype Oliver Typewriters into actual service, in many diverse lines of business. We wanted the public's verdict. It came in a burst of admiration and a flood of orders that proved Printype a brilliant success.

Printype letters, wherever seen, excited the keenest interest. Business men who received their first Printype letter almost invariably answered, post haste—"Where did you get that type?" Thus Printype captured the country without firing a single shot.

Price Not Advanced

The Printype Oliver Typewriter sells for \$100. You can pay at the rate of 17 cents a day. The "Printyper" is our latest and best model. The new type adds 25 per cent to the value, but not one cent to the price. A small cash payment brings the machine. (248)

Send Printype Coupon Now!

If you or any one in whom you are interested contemplate going to a Business College, write us first and we will, without charge, supply you with some very valuable information on the subject.

The Oliver Typewriter Company,
116 Prospect St., Cleveland, Ohio.

Easy Riding— Double Tire Mileage!

You enjoy a Cartercar every mile of the way, over all kinds of roads, because it does not jerk nor jar. In changing speeds you simply move a lever forward or backward and change instantly and noiselessly from one speed to any other. There are unlimited speeds too.

This same feature also prevents wear on all parts—and especially on tires. Many owners tell us that they get twice the usual mileage. Just think what this means to you in your upkeep expense bills.

Gearless Transmission

A Cartercar has no gears in the transmission—no clutch. It is simple—so simple that it is trouble-proof. You have power to climb 50 per cent grades—unlimited speeds—which means service that you can not possibly get from any other car. If you want the best possible value from the money you invest in your car then you want the Cartercar. Let us prove these statements to your own satisfaction.

Cartercar Company, Pontiac, Mich.

HOW FAR CAN A BEE SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think!

The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

HONEY MARKETS

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached on all sides and evenly capped, except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

No. 1.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal ex-

tractors and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

CINCINNATI.—There is very little doing in honey, both comb and extracted. No new honey has yet arrived. General conditions are good for a big crop. Cincinnati, June 20. C. H. W. WEBER & CO.

KANSAS CITY.—The first shipment of new comb honey has made its appearance, and sold on arrival at \$3.75 per case of 24 sections for No. 1. The demand is good. The demand for extracted is light; supply not large. We quote white at 8 to $8\frac{1}{2}$. Beeswax brings 25 to 28. C. C. CLEMONS PRODUCE CO. Kansas City, June 19.

ZANESVILLE.—Best grades of white comb honey still command 18 to 19 cts., but the unusually good honey-flow (locally at least) is likely to result in considerable weakening of the market. Best white extracted, which has been selling at 9 to 11, according to quantity, will probably drop a point or two within the next few weeks. For beeswax we now offer, in trade, 31 to 32, according to color and quality; in cash, 29 to 30. Zanesville, June 21. EDMUND W. PEIRCE.

CINCINNATI.—This market is in good shape to receive the new crop of honey, which will be a big one in this part of the country. Our advice is that the early bird will get the price, and those who wait will be sorry for it. We can use quick shipments of comb honey, and are selling what we have at from 15 to 16 by the case; some cheaper at wholesale. Extracted honey for table use is selling at $7\frac{1}{2}$ to 10, and amber honey in barrels at 6 to $7\frac{1}{2}$, according to the quality and quantity purchased. For choice bright yellow beeswax we are paying 30 cts. per lb., delivered here. Cincinnati, June 19. THE FRED W. MUTH CO.

NEW YORK.—There are no new features in the condition of the market. New crop of comb honey from the South is beginning to arrive in small quantities, and finds ready sale at from 14 to 15 for No. 1 and fancy white, and lower grades at from 12 to 13. Extracted honeys are decidedly dull; and while there is a fair demand for strictly first-class quality, amber and light amber are neglected. West Indian is arriving in large quantities; and on account of the slow demand, prices have been gradually declining. Choice stock is now selling at around 65 to 70 cts. per gallon. We are advised by our California shippers that there will be no sage honey to speak of this season; and prices on others, such as alfalfa and orange, have not been established as yet for the new crop. Beeswax is steady at from 31 to 32. New York, June 21. HILDRETH & SEGELKEN

An Active Season is Here

A carload of perfectly new goods is just on hand from the factory, and another car is expected any day, and the factory has booked us for four cars. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for swarms. Frames, and other inside fixtures too, should be put together now.

If you are wanting any special goods, orders should be made at once. Other cars are coming regularly from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

The mailing of our new catalog was completed some time ago. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder—the best in the market. Write for our catalog.

Honey reports continued from page 2.

SAN FRANCISCO.—The new crop of honey is very late in materializing. Fancy water white is 15 to 16; dark to amber, 14 to 14½; water-white extracted, 9 to 9½; light amber, 8 to 8½; dark from 6 to 8. Beeswax 30 to 31 for nice yellow, and 24 to 29 for darker grades. Not much honey or wax is being offered.

San Francisco, June 17. J. C. FROHLIGER.

INDIANAPOLIS.—Market is now practically bare of fancy white comb honey. No. 1 white is selling at 16 to 17; amber comb is in slow demand, and at varied prices. Best extracted sells at from 11 to 12 in five-gallon cans, according to quantity. Beeswax is in good demand, and producers are being paid 30 cents cash or 32 in trade.

Indianapolis, June 21. WALTER S. POWDER.

CHICAGO.—Our market is entirely bare of comb honey of the best grade, and very little of the poorer grade is to be found. No. 1 to fancy white comb will bring 17 to 18 upon arrival; and until the traders each get a small supply consignments will sell promptly. There is no change in the price of extracted from recent quotations. Beeswax also is steady.

Chicago, June 19. R. A. BURNETT & Co.

ST. LOUIS.—Southern honey in barrels is commencing to arrive, but there is no trade on the article, as buyers are holding off. The stocks of comb honey are light, and there is barely any demand for same. We quote fancy white comb honey at 16 to 17; No. 2 white, 15; light amber, 13 to 14; by the case, fancy white comb honey, \$3.65 to \$3.75; No. 2 white, \$3.25 to \$3.40; amber, \$2.75 to \$3.10, according to quality. Dark or broken honey is almost unsalable. Extracted honey, Southern, in barrels and half-barrels, 6 to 6½ for choice light amber; dark sells for less; in five-gallon cans at 6½ to 7. California and other western honey, white, brings 9 to 9½; light amber at 8 to 8½; all in five-gallon cans. Beeswax is in good demand at 31½ for prime; inferior and impure sells for less.

POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

RUSH ORDERS

BY MAIL.—Has your "forgettery" been working? And right this minute you need foundation or other items. See page 1 of our catalog, and it gives parcel-post rates on various articles.

BY EXPRESS.—Larger shipments than can go by mail we can rush out at once. Parcel-post and express orders receive our first attention.

BY FREIGHT.—Our rule is "ship same day the order is received," and we break it only when absolutely necessary. Notice that Lansing is the railroad center of Michigan from which freight shipments can be delivered quickest.

And we fill all orders with Root's goods. Just remember that too. Send for catalog. Beeswax wanted.

M. H. HUNT & SON, LANSING, MICH.

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

When you are in urgent need of bee supplies you will likely consider two details—quality and promptness. For about a quarter of a century I have handled the Root quality of goods, shipping from Indianapolis at the factory schedule of prices. I believe it is generally admitted that as to material, workmanship, and accuracy, their equal is not to be had elsewhere. An immense stock on hand at all times, and no old or inferior goods offered at any price. Nearly every order is filled within a few hours after arrival, and you will agree with me that this feature is the finest advertising that I have ever been able to place on my house. We have so many railroads and express companies at our command that shipping promptly from here is not a hardship. The parcel post is a boon to all of us, and these packages are taken up by Uncle Sam three times a day.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and I should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

873 Massachusetts Avenue

"By Airship"

A customer writes, "You must have sent my last order by airship, it got here with such lightning speed."

Handicapped by a flood loss that necessitated an entirely new stock just at a time when the Root factory was crowded with orders, it has taxed my resources to the utmost to maintain my reputation for promptness in the delivery of supplies. The most active season for a number of years has made the task doubly difficult. Possibly a few customers may have been inconvenienced at the outset. I am glad to say, however, that my stock is now practically complete, and new goods are arriving right along. With the better facilities of my new location, and additional help for the remainder of the rush season, I feel that all customers, old and new, will be served here with as little delay and as great satisfaction as would be possible anywhere.

Please bear in mind that all factories and supply dealers are now experiencing a rush of orders, and are severely taxed to fill orders as promptly as their customers might desire. As possible, place your order a few days before goods are actually required, and you will not be disappointed.

BEESWAX WANTED!

Recent demand for comb foundation has been good, and our stock of beeswax is running low. We offer for good average quality and prompt shipment 30 cts. per lb. cash, or 32 in trade, delivered at Medina. Shipments from the Pacific coast should be in barrels or boxes. From other Western points, pack in double bags to get the most favorable rate. Be sure to mark the shipment so it can be identified when it arrives, and send us a shipping receipt with a statement of gross, tare, and net weight shipped. This is important as it gives us something to check so as to determine whether any has been lost in transit.

The A B C of Bee Culture

The only cyclopedia on bees, 750 pages, fully illustrated. Every phase of the subject fully treated by experts. Price \$2.00 postpaid; money refunded if unsatisfactory.

THE A. I. ROOT CO., Medina, Ohio.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, checking the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 **MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **THE BEEKEEPER AND FRUIT-GROWER.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 **CATALOG OF BEEKEEPERS' SUPPLIES.** Our complete catalog will be mailed free to any address on request.
- 7 **SPRING MANAGEMENT OF BEES.** A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oftentimes perplexing matter. Price 10 cts.
- 8 **HABITS OF THE HONEYBEE.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **HOW TO KEEP BEES.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **THE A B C OF BEE CULTURE.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$2.00 postpaid; half leather, \$2.75.
- 11 **GLEANINGS IN BEE CULTURE.** A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 **BACK-YARD BEEKEEPING.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 **THE BUCKEYE BEEHIVE, or the management of bees in double-walled hives.** Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 **ADVANCED BEE CULTURE.** A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

The association has placed at the disposal of the department director a fund which he may procure: 1, demonstration of the treatment and handling of bees; 2, the use of machines in extracting honey, and a demonstration of the process of restoring the comb for refilling.			

SPECIAL NOTICES

A. I. ROOT

"PEACH JUICE" FROM EVAPORATED PEACHES.

Mrs. Root calls my attention to a mistake in one of my statements on page 425, June 15. I said I thought she used about a *pound* of peaches to a quart of water. She says it should have been *one-fourth* of a pound to a quart of water; and this $\frac{1}{4}$ lb. in a quart of water gives me both peaches and juice for *two* of my fruit suppers, and so the peaches I now have every day with my apples cost only 1½ cents for each meal. With the above amount of water, peach juice is by no means an expensive drink compared with the drinks at the soda fountains, and I am sure it is more wholesome, for it is just pure water and "uncooked food"—the food and drink the great Father himself prepared for our health and happiness.

VENTILATED SHOES, ETC.

Since what was said in Special Notices in our issue for June 15, when the hot weather came on I found my ventilated shoes spoken of too heavy, and my feet became unpleasantly warm. I am now feeling happy because of some cheap cloth shoes such as Mrs. Root wears. They cost only \$1.25; and if I am careful to put on different shoes whenever it rains and we have muddy weather, a pair lasts me quite a while. They are made of such thin cloth that they are almost as comfortable as going barefoot; and with a little care in keeping the dust brushed off with a good stiff brush they do not look very untidy—that is, I do not have to apologize for being around "barefooted" when visitors come unexpectedly. I suppose they can be had at almost any shoestore here in the North, although I did not succeed in finding any in Bradentown, Fla.

THE AMERICAN SEARCHLIGHT.

If you wish to keep track of the way in which civic reform is going on at the present time by leaps and bounds, you should subscribe for the *American Searchlight*, published by the American Civic Reform Union, 511 Caxton Building, Cleveland. Every citizen of Ohio should be interested in our Ohio law against "pandering," approved by Governor Cox April 23, to be effective in 90 days. This law makes it a penitentiary offense of from two to twelve years for being in any manner accessory to leading a young girl astray, or to be engaged directly or indirectly in any phase of the white-slave traffic. Besides the penitentiary penalties there is a fine of from \$1000 to \$5000. The complete law is given in the May issue of the *Search-*

light. I am especially interested in this Civic Reform Club, because The A. I. Root Co. had something to do with getting it started. The subscription price of the journal is 50 cents a year. Address Albert Sidney Gregg, editor, as above.

"STARVING AMERICA."

In reply to the many inquiries in regard to the price of this book see the following:

We are in receipt of your note drawing our attention to your review of McCann's "Starving America." The price of this book is \$1.50 net, and we should be glad to have you note this in your next issue of GLEANINGS.

We are unable to find any trace of your previous request for the book. In sending out review copies we always enclose a slip giving the price, or mark the price on the title-page.

New York, June 10. GEORGE H. DORAN CO.

As friend Terry also gave the book quite a favorable notice it has been rather perplexing not to be able to give the price. We think the book is well worth the money.

Later.—We have just made arrangements whereby we can furnish the above book clubbed with GLEANINGS for an even \$2.00.

DASHEEN FOR PLANTING.

Dasheen bulbs are finally for sale by a Tampa seedsman. The following explains itself:

Mr. A. I. Root:—I am sending you an advertisement which I clip from The Alabama Times.

Kerens, W. Va. C. R. MILLER.

SOMETHING NEW—SOMETHING GOOD.

Recommended and endorsed by the government and leading agriculturists, the dasheen—queen of the potato family, should be planted by every farmer. It tastes better than the sweet potato; yields five times as much as the sweet potato; keeps better than the sweet potato. We want every farmer in the United States to plant a few dasheens this year—next year you will plant acres. On receipt of 15 cents (stamps or coin) we will mail you a quart of dasheen bulbs—enough to plant a big patch. Only one quart to each farmer. Don't ask for more. Full particulars how to start and grow the dasheen with every quart order. Address Crenshaw Bros. Seed Co., Tampa, Fla. Be sure to mention the *Times*. If you don't, this order can't be filled.

I am acquainted with the Crenshaw Brothers Seed Co., and they are, without doubt, good for whatever they offer. As there is no date to the above clipping, we can not be sure they are prepared at the present time to furnish bulbs.

TWO HUNDRED THOUSAND BARRELS OF SEED POTATOES.

The above is the amount grown in the State of Maine for one seed-potato firm in Boston, Mass. These potatoes are held in cold storage so they will be in fine condition to plant in Florida, or anywhere else, for that matter, on the face of the earth. A carload has just been shipped to a seedsman in Tampa, Florida, to be held in cold storage until October and November. A sample of the Red Bliss Triumph has been submitted to me, and it was certainly in beautiful condition for planting. In fact, it has already been cut in two and planted. You see this solves the difficulty of having good nice firm seed potatoes ready to plant anywhere in the world, and in any month of the year. The difficulty of raising our own seed potatoes down in Florida is that, unless we have cold storage, it is a difficult matter to keep them in good condition until planting-time in the fall. I have succeeded fairly well in keeping them in my incubator cellar covered with dry sand, except that the sprouts on them were rather long when I got around to care for them the first of November.

Of course it is somewhat risky to plant potatoes on the dates mentioned during the average winter around Bradentown and in Manatee Co. Quite often we have frosts more or less; but if the potatoes are not too far along, even if they are nipped and killed down pretty close to the ground, they will pick up and make a good crop. He who succeeds, or even contributes to the success of giving hungry human-

ity good potatoes at a low price every month in the year *all over the world* is a humanitarian, and I greatly enjoy doing my part of the work.

My dasheens are now doing finely, not only down in Florida, but I have forty or fifty fine-looking plants here in Medina, with leaves at the present time, July 1, as large as dinner-plates.

Kind Words from our Customers

The supplies I got at your factory May 31 were entirely satisfactory.

Bath, Ohio, June 16. HARLEY WILKINSON.

Please tell Mr. A. I. Root that his Home papers are greatly appreciated by his Cheltenham readers who hope he will continue them for many years to come.

A. H. BOWEN.

Coronation Road, Cheltenham, England, May 31.

A KIND WORD AND A KIND OFFER FROM A JAMAICA BUSINESS MAN.

Mr. A. I. Root:—I am an American business man doing business in Jamaica, W. I., and I have come across GLEANINGS for October, and am pleased to read your articles. The opportunity to-day for the laymen to spread the gospel of Jesus Christ is wonderful. I enclose some leaflets which I am, by the blessing of God, sending out free all over the world. I shall be glad to send a supply to any one who will send me his address on a postcard (postage on cards 2 cts., and on letters 5 cts. to Jamaica).

Jamaica, B. W. I., Nov. 4. E. B. HOPKINS.

A KIND WORD FROM FAR-OFF BRITISH COLUMBIA.

[We let the writer of the following story tell it in his own quaint phraseology.—A. I. R.]

Mr. A. I. Root:—This is first my letter to you. I am trying to write English. I am a foreigner.

I find we shall read what is good, and never shall we say in this world we have not time to read, and especially when we come to be of old age.

In your writing in GLEANINGS you are very severe on big able-bodied men abegging.

I been thinking what will replace you in your journal in your good Home talk when you be here no more, or when you come to die. In my own hearth you been always to me as model man. When young you first make a start by working for your daily bread; and now in your old age it is right for every man when he come to old age to be sure to belong to the Lord Jesus Christ.

I am now sure for Christ. I feel glad I find the Lord our God is with us; and he is too holy to be with sinners.

I am trying now every day to live righteous before him.

I am a reader of your journal, and can not write good English. I learn a little writing from reading, and reading I learn by myself. I keep bees now to make money, and I like bees much, I must say, for pleasure.

Elwine, B. C., Canada, Nov. 13. H. KACER.

A GROCER WHO DIDN'T "BACK DOWN" WHEN HE LOST SOME OF HIS CUSTOMERS.

I saw in GLEANINGS a short time ago where a beekeeper stopped his paper because Bro. Root preached temperance. He liked his rum; but you can continue mine for his good work and good sermons. Inclosed find one dollar for another year, and then don't stop it if I am alive at the end of the year, for I want to see the rum business step down and out. We are a manufacturing town of about 6000 population; have 16 to 17 places where rum is sold; but we have a strong temperance sentiment, and are in hopes to win out this spring. Two years ago we came within 44 of going dry.

I am in the grocery business. Two years ago some of the rum-sellers stopped trading with me because I stood for temperance; but last year my trade increased over \$2000. I believe right will prevail. I don't believe in selling out for a little pottage. I am 65 years old, and I never voted to license men to sell rum, and I think it is a poor time to com-

mence now. There is not a man in town selling rum to-day but commenced the business since I became a voter; and the idea that I should conform to *their* wishes! I am for temperance, to stay. God being my helper, I mean to show my colors at the polls on election day.

Ticonderoga, N. Y., Feb. 10. GEO. H. ADKINS.

A TURNING-POINT IN A LIFE; A KIND WORD FOR THE A B C BOOK.

Looking back over the last 25 years, if I were asked what was the most important influence exerted upon my life, I believe that, without any study whatever, I should say that the reading, 20 years ago, of a copy of the A B C of Bee Culture, by A. I. Root, of Medina, Ohio. At the time I read it I was an apprentice stair-builder in the old Phoenix Lumber Co.'s mill at Houston, Texas, and my older brother and myself were operating a ten-acre apiary and poultry-ranch some four miles from the city, going back and forth to our work day and night.

This work was the first thing in the way of constructive literature I had read since finishing the "Swiss Family Robinson" several years previous; and, coming just at the time it did, I am confident that it is to be accredited for being the means of enlisting my interest in the subject of science as applied to agriculture, and that practically any and all of the reputation I enjoy as a scientist to-day is to be traced to this book.

As a practical work on entomology as related to the bee it stands without a peer; and on account of the many allied industries which depend for a part or all of their success on the apiarist, I found it to be a good text-book, not only on horticulture and carpentry, but on the subject of mechanics as well.

The way Novice had of inventing any thing he needed stimulated my intellect to "go and do likewise," and the Patent Office will be able to attest the fact that there have been "some things doing" in my cranial cavity, as at this time there are 38 inventions to my credit, some patented, others not more than barely completed.

My main invention is the motor plow, which I believe I can truthfully say has never been out of my mind for an entire week since I received the first inception of the idea, some 18 years ago, and if to-day it were in use here in this fertile "South Plains or Ballinger Country" it would save the farmers thousands of dollars annually in feed-bills, saved by not having to feed any thing on Sundays, rainy days, and during idle periods during the year.

There is a maturity of intellectual development possible to the few who search for the secrets of science which enables a man to create new things almost as easily as the average man can go along on his plodding routine work with his divinely potential mind in a condition of mental atrophy.

To-day as I was driving along among the fragrant catclaw (acacia) and mesquite (prosopis) and alfalfa (medicago) I could not keep from thinking about how the flying over his head of a swarm of bees some 48 years ago changed the life history of A. I. Root, and how, in turn, his writing and my reading his book on the subject had changed my life history, and, like the story of the house that Jack built, how it goes on and on, until no man may measure the final result of a careless swarm of bees flying over one young carpenter, and how it had its indirect influence on another young stair-building carpenter 20 years later.

Some time I shall write an article telling the story of success with the honeybee in Central Texas, near this town of Ballinger; and I am writing now for prices on the latest edition of the A B C of Bee Culture, with the intention of giving them as prizes to the young readers of my paper; and I shall expect every one who reads a copy to add his mite to the sum total of human understanding.

Ballinger, Texas, May 1. A. S. WHITTEN.

GREAT LAKES MAP; SEND FOR INTERESTING VACATION LITERATURE.

The D. & C. Line, which operates daily steamer service between Detroit and Buffalo, has published a pamphlet containing the largest map of the Great Lakes, showing routes to all summering places. You should have one to plan your vacation. A request with two-cent stamp enclosed will bring it. Write now.

DETROIT & CLEVELAND NAVIGATION Co., Detroit.

SPECIAL SALE!

Root's Goods Below Our Cost

Beekeepers will change their minds and use different kinds of supers all of a sudden. Our trade used, before section-supers, shipping cases, etc., while now nearly every beekeeper in our locality produces bulk comb honey, which, consequently, leaves us with a big stock of section supers on hand, which we are willing to sell very cheap just to dispose of them. They are all in the original packages, just as we received them from the factory, and there is absolutely nothing the matter with them, only we have hardly any more sale for them in our locality.

70 2 I-8.....	.37 each	60 2 P-8.....	.37 each
25 4 I-8.....	.50 each	100 4 I-10.....	.55 each

HONEY-CANS

As in previous seasons, we have prepared a very large and complete stock of honey-cans in our warehouse, ready for immediate shipment to you. Our honey-cans this season are the product of the largest independent can-manufacturing company in the United States, and are warranted to be the best grade possible to procure. Every can and case is fully guaranteed to give absolute satisfaction. The boxes are of the very best material that can be obtained for packing honey-cans, being strong and substantial, and securely nailed with cement-coated nails.

Prices quoted on application. Full line of Root's Beekeepers' Supplies always on hand.

PRINTYPE

Receives the Plaudits of the Public

Vigilant Protector of People's Eyesight Hailed as a Benefactor by Many Thousands of Enthusiastic Admirers. "Officer Printype" Responds with Becoming Modesty.

Officer Printype says: "I am overwhelmed by the ovation which has greeted my appearance in your midst. I am simply doing my sworn duty in ridding the Business and Financial Districts of the Bad Characters that for years have made Typewriters a menace to your eyesight. I have mercilessly exposed and relentlessly pursued these dangerous Typewriter Types, which are responsible for more cases of Defective Vision than all other causes combined. "Report direct to my Headquarters, in the Oliver Typewriter Building, Chicago, any machine whose type is violating the Optical Law and I'll have the offender haled before the Court of Public Opinion."

Printype — **OLIVER** Typewriter

Printype is owned and controlled exclusively by The Oliver Typewriter Company

America rings with praise and applause for Printype. This superb new typewriter type has attracted more attention than any typewriter innovation brought out in recent years.

Hundreds of thousands of people have seen this new type and wondered what it was that made Printype Correspondence seem like a spoken message. There's virility, strength and charm in Printype correspondence. There's refinement and "class" and style.

Not because of its novelty—it's inherent in the type!

A Vast Improvement

Printype is designed in shaded letters and numerals, like the type in which books and magazines are printed. It is book type transformed and adapted to modern typewriter requirements.

This radical departure from the old style "outline" letters makes it possible to produce on *The Oliver Typewriter* a page of manuscript as clear and attractive as that of the finest book. The Oliver is the first and only typewriter that successfully prints print!

The Primary Reason

Printype resulted from our discovery that "outline" type, with its sameness, due to absence of shading, was harmful to the eyes.

The Silent Test

For months, without any advertising, we put hundreds of Printype Oliver Typewriters into actual service, in many diverse lines of business. We wanted the public's verdict. It came in a burst of admiration and a flood of orders that proved Printype a brilliant success.

Printype letters, wherever seen, excited the keenest interest. Business men who received their first Printype letter almost invariably answered post haste—"Where did you get that type?" Thus Printype captured the country without firing a single shot.

Price Not Advanced

The Printype Oliver Typewriter sells for \$100. You can pay at the rate of 17 cents a day. The "Printyper" is our latest and best model. The new type adds 25 per cent to the value, but not one cent to the price. A small cash payment brings the machine. (248)

Easy Riding— Double Tire Mileage!

You enjoy a Cartercar every mile of the way, over all kinds of roads, because it does not jerk nor jar. In changing speeds you simply move a lever forward or backward and change instantly and noiselessly from one speed to any other. There are unlimited speeds too.

This same feature also prevents wear on all parts—and especially on tires. Many owners tell us that they get twice the usual mileage. Just think what this means to you in your upkeep expense bills.

Gearless Transmission

A Cartercar has no gears in the transmission—no clutch. It is simple—so simple that it is trouble-proof. You have power to climb 50 per cent grades—unlimited speeds—which means service that you can not possibly get from any other car. If you want the best possible value from the money you invest in your car then you want the Cartercar. Let us prove these statements to your own satisfaction.

Cartercar Company, Pontiac, Mich.

MODEL 5A—Five passenger Touring Car. With electric starting and lighting system and complete equipment \$1700

MODEL 5B—A big, classy Roadster. With electric starting and lighting system and complete equipment \$1600

A black and white photograph of a forest scene. Sunlight filters through the dense canopy of trees, creating a dappled pattern of light and shadow on the forest floor. Several tree trunks are visible, some in the foreground and others in the background. The overall atmosphere is serene and natural.

HOW FAR CAN A BEE SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think!

The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

No. 1.—Sections to be well filled; combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—Fancy and No. 1 white comb, 16 to 17; fancy white, 11 to 12. Beeswax, 30.
Boston, July 5. **BLAKE-LEE CO.**

INDIANAPOLIS.—Market is now practically bare of fancy white comb honey. No. 1 white is selling at 16 to 17; amber comb is in slow demand, and at varied prices. Best extracted sells at from 11 to 12 in five-gallon cans, according to quantity. Beeswax is in good demand, and producers are being paid 30 cents cash or 32 in trade.
Indianapolis, July 5. **WALTER S. POWDER.**

CHICAGO.—At this writing some of the new comb honey has come on the market. The A No. 1 to fancy grades have sold readily at 17 to 18 cts., and the No. 1 at about 1 ct. per lb. less. No other grades have yet appeared. This, of course, is all white comb in one-pound sections. No sales have yet been made of extracted honey of this year's harvest. Beeswax is steady in price at from 30 to 32, according to color and cleanliness.

Chicago, July 3. **R. A. BURNETT & Co.**

ZANESVILLE.—Best grades of white comb honey still command 18 to 19 cts., but the unusually good honey-flow (locally at least) is likely to result in considerable weakening of the market. Best white extracted, which has been selling at 9 to 11, according to quantity, will probably drop a point or two within the next few weeks. For beeswax we now offer, in trade, 31 to 32, according to color and quality; in cash, 29 to 30.

Zanesville, July 5. **EDMUND W. PEIRCE.**

An Active Season is Here

A carload of perfectly new goods is just on hand from the factory, and another car is expected any day, and the factory has booked us for four cars. This brings up our assortment so that we can now furnish almost any thing listed in the catalog at once.

Hives should be ordered at once if they are to be ready for swarms. Frames, and other inside fixtures too, should be put together now.

If you are wanting any special goods, orders should be made at once. Other cars are coming regularly from the factory, and we can save you considerable in transportation charges by having your goods come with ours in the car.

The mailing of our new catalog was completed some time ago. If you are not on our mailing list send us a postal-card request for this catalog.

If you want to buy in quantities considerably larger than quoted in the catalog, give us a list of your needs and we will quote price accordingly.

If you have never tried Root quality goods, make a beginning this season. You will not be disappointed in results. Our branch is maintained for service in this line and we can give it to your entire satisfaction.

We are sole agents in Ohio for the Roller Tray Incubator and Brooder—the best in the market. Write for our catalog.

POSTAGE IS PREPAID by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila, Samoa, Shanghai, Canal Zone, Cuba, and Mexico. Canadian postage is 30c per year. For all other countries in the Postal Union add 60c per year postage.

CHANGE OF ADDRESS. When a change of address is ordered, both the new and the old must be given. The notice should be sent two weeks before the change is to take effect.

DISCONTINUANCES. Notice is given just before expiration. Subscribers are urged, if unable to make payment at once after expiration, to notify us when they can do so. Any one wishing his subscription *discontinued* should so advise us upon receipt of the expiration notice; otherwise it will be assumed that he wishes GLEANINGS continued and will pay for it soon.

HOW TO REMIT. Remittances should be made by draft on New York, express-order or money-order, payable to the order of The A. I. Root Co., Medina, Ohio. Currency should be sent by registered letter.

AGENTS. Representatives are wanted in every city and town in the country. A liberal commission will be paid to such as engage with us. References required.

FOREIGN SUBSCRIPTION AGENTS.

Foreign subscribers can save time and annoyance by placing their orders for GLEANINGS with any of the following authorized agents at the prices shown:

PARIS, FRANCE. E. Bondonneau, 120 Avenue Emile Zola.

Per year, postpaid, 8 francs.

GOODNA, QUEENSLAND. H. L. Jones. Any Australian subscriber can order of Mr. Jones. *Per year, postpaid, 6/7 p.*

DUNEDIN, NEW ZEALAND. Alliance Box Co., 24 Castle St. *Per year, postpaid, 6/7 p.*

Honey reports continued from page 2.

NEW YORK.—We are looking forward to a good season for both comb and extracted honey, as the market is pretty well cleaned up of last year's stock. There is quite a lot of Southern honey this year, as Porto Rico, Cuban, Mexican, and a little Florida. White comb honey will bring from 13 to 16 cents per pound. Fancy and white extracted from 7½ to 9 cents. CHAS. ISRAEL & BROS.

New York, July 8.

CINCINNATI.—The market is in good shape to receive the new crop of honey, which will be a big one in this part of the country. Our advice is, that the early bird will get the price, and those who wait will be sorry for it. We can use quick shipments of comb honey, and are selling what we have at from 15 to 16½ cts. by the case, some cheaper at wholesale. Extracted honey for table use we are selling at 7½ to 10, and amber honey in barrels at 6 to 7½, according to the quality and quantity purchased. For choice bright yellow beeswax we are paying 30 cts. delivered here.

Cincinnati, July 8. THE FRED W. MUTH CO

ST. LOUIS.—The receipts of Southern honey in barrels and five-gallon cans continue to arrive, and prices are established at 6½ cents in barrels and 7 in cans, for pure light-amber honey. There is no California or other Western honey to speak of in this market, and quotations are nominal at 8 to 8½ for white, and 8 for light amber, all in five-gallon cans. Comb honey is not in demand at all, and the receipts are also small. The quotations are nominal for fancy white comb honey at 16 to 17; No. 2 white, 15; light amber, 13 to 14; by the case, fancy white comb honey, \$3.65 to \$3.75; No. 2 white, \$3.25 to \$3.40; amber, \$2.75 to \$3.10, according to quality. Dark or broken honey is almost unsalable. Beeswax is in good demand at 32 for prime. Impure and inferior sells for less.

R. HARTMANN PRODUCE CO.

St. Louis, Mo., July 7.

Merited Growth of Banking By Mail

The extensive growth of the **BANKING BY MAIL** plan is fully merited by the great benefit which thousands of people derive from it. **BANKING BY MAIL** is a modern convenience which enables people in all parts of the country to avail themselves of the safety and satisfactory rate of interest which results from depositing funds in large, well-managed banks.

POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

Elk Grove, Cal.

B. B. HOGABOOM.

RUSH ORDERS

BY MAIL.—Has your “forgettery” been working? And right this minute you need foundation or other items. See page 1 of our catalog, and it gives parcel-post rates on various articles.

BY EXPRESS.—Larger shipments than can go by mail we can rush out at once. Parcel-post and express orders receive our first attention.

BY FREIGHT.—Our rule is “ship same day the order is received,” and we break it only when absolutely necessary. Notice that Lansing is the railroad center of Michigan from which freight shipments can be delivered quickest.

And we fill all orders with Root's goods. Just remember that too. Send for catalog. Beeswax wanted.

M. H. HUNT & SON, LANSING, MICH.

OPPOSITE LAKE SHORE DEPOT.

FRUIT-GROWERS!

Send 10 names of fruit-growers and 10 cents, and get “The Southern Fruit Grower” four months. Tells all about fruit-growing, gardening, poultry-raising, etc., in the South. Contains from 32 to 40 pages each month. Address

“Griggs Saves Your Freight”

is the place all successful beemen have their eyes on now. Proof is the way orders are streaming in here from all over the United States.

Root's Shipping Cases for Honey

We are well supplied with shipping cases for your comb honey, all sizes and styles. Don't put a nice crop of honey in old musty dirty cases. Get new ones, and get the top price for your crop. . . NEW 60-POUND CANS, two in a case, a specialty. . . FIRST-CLASS ALCOHOL-BARRELS, the best package for extracted honey. We prefer barrels to cans if we get them early. Let us know what you have to offer in both COMB and EXTRACTED HONEY. We are in the market for any quantity.

Send in your BEESWAX and turn it into money. Sections and foundation sent out the day the order is received. If you are short, send to us. Quick deliveries are our pride.

S. J. GRIGGS & CO., - 26 NORTH ERIE STREET, - TOLEDO, OHIO.
“Griggs is always on the job.”

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

When you are in urgent need of bee supplies you will likely consider two details—quality and promptness. For about a quarter of a century I have handled the Root quality of goods, shipping from Indianapolis at the factory schedule of prices. I believe it is generally admitted that as to material, workmanship, and accuracy, their equal is not to be had elsewhere. An immense stock on hand at all times, and no old or inferior goods offered at any price. Nearly every order is filled within a few hours after arrival, and you will agree with me that this feature is the finest advertising that I have ever been able to place on my house. We have so many railroads and express companies at our command that shipping promptly from here is not a hardship. The parcel post is a boon to all of us, and these packages are taken up by Uncle Sam three times a day.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and I should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.
873 Massachusetts Avenue

"By Airship"

A customer writes, "You must have sent my last order by airship, it got here with such lightning speed."

Handicapped by a flood loss that necessitated an entirely new stock just at a time when the Root factory was crowded with orders, it has taxed my resources to the utmost to maintain my reputation for promptness in the delivery of supplies. The most active season for a number of years has made the task doubly difficult. Possibly a few customers may have been inconvenienced at the outset. I am glad to say, however, that my stock is now practically complete, and new goods are arriving right along. With the better facilities of my new location, and additional help for the remainder of the rush season, I feel that all customers, old and new, will be served here with as little delay and as great satisfaction as would be possible anywhere.

Please bear in mind that all factories and supply dealers are now experiencing a rush of orders, and are severely taxed to fill orders as promptly as their customers might desire. As possible, place your order a few days before goods are actually required, and you will not be disappointed.

The ABC of Bee Culture

The only cyclopedia on bees, 750 pages, fully illustrated. Every phase of the subject fully treated by experts. Price \$2.00 postpaid; money refunded if unsatisfactory.

THE A. I. ROOT CO., Medina, Ohio.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, checking the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 **MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **THE BEEKEEPER AND FRUIT-GROWER.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 **CATALOG OF BEEKEEPERS' SUPPLIES.** Our complete catalog will be mailed free to any address on request.
- 7 **SPRING MANAGEMENT OF BEES.** A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oftentimes perplexing matter. Price 10 cts.
- 8 **HABITS OF THE HONEYBEE.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **HOW TO KEEP BEES.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **THE A B C OF BEE CULTURE.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$2.00 postpaid; half leather, \$2.75.
- 11 **GLEANINGS IN BEE CULTURE.** A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 **BACK-YARD BEEKEEPING.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 **THE BUCKEYE BEEHIVE,** or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 **ADVANCED BEE CULTURE.** A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

Please in writing mention GLEANINGS.

QUEENS AND BEES

An improved superior strain of Italians is what **QUIRIN RAISES**. Our stock is Northern bred and hardy—all stock being wintered on summer stands.

We sent fifty nuclei to J. D. Nixon, of Lafarge, Wis., and July 20th (of same year) he wrote us saying they did just splendid, as at that date they had already filled their supers, and that he would have to extract them. We have files of similar testimonials.

Prices for rest of season	1	6	12
Select queens	\$.75	\$ 4.00	\$ 7.00
Tested queens	1.00	5.00	9.00
Select tested queens	1.50	8.00	15.00
Breeders	3.00	15.00	
Golden breeders	5.00		
Two-comb nuclei, no queen ..	2.25	12.00	22.00
Three-comb nuclei, no queen ..	3.25	18.00	32.00
Full colonies on 8-frames	5.00	25.00	
One pound bees, no queen	1.50	8.00	
Half pound bees, no queen	1.00	5.00	

Add price of queen wanted with bees. Bees by the pound, nuclei, and colonies; if wanted before June 1, add 25 per cent. **QUEENS NOW READY**. Safe delivery and pure mating guaranteed. Over 20 years a breeder. Testimonials and circular free.

QUIRIN - THE - QUEEN - BREEDER
BELLEVUE, OHIO

Miller's Strain of Red-clover ITALIAN QUEENS

By Return Mail or order returned

Bred from superior breeders for business; gentle; no better hustlers; bees roll honey in; three-banded; **Northern-bred**; hardy and vigorous; winter well; not inclined to swarm; bred from best leather-colored strains. Untested, 75 cts.; six, \$4.00; dozen, \$7.50. Select untested, \$1.00; six, \$5.00; dozen, \$9.00. Satisfaction guaranteed.

Isaac F. Miller, a queen specialist and breeder for sixteen years, previously of Brookville, Rt. 2, Reynoldsville, and lately of Oil City, Rt. 2, Pa., is agent and breeder for E. L. Miller. Send all orders to

I. F. MILLER, Rt. 2, Brookville, Pa.

QUALITY HILL QUEENS!

GOLDENS.—An opportunity to get Ben Davis' famous utility Goldens. Yard stocked from his apiaries. Breeder kept 16 frames filled until put in nucleus in June. Drone colonies headed by mothers of strain producing over 178 perfect $4\frac{1}{4}$ sections last flow. Especially immune to European foul brood. **THREE-BANDS.**—A fine strain of prolific dark queens—drone mothers from a strain which produced over 172 perfect $4\frac{1}{4}$ sections last flow. An excellent honey-gathering grade; disease-resisting; the best of winterers.

All queens reared in full colonies during honey-flow; mated in four-frame nuclei, which gives large, vigorous, and prolific queens. Purity of mating, safe arrival, satisfaction, freedom from disease guaranteed.

Either Strain, Select Tested, \$2.50. Tested, \$1.50. Untested, 80 cents.

Write for prices on a few excellent breeders.

KENNETH HAWKINS,

Plainfield, Illinois

BEESWAX WANTED!

Recent demand for comb foundation has been good, and our stock of beeswax is running low. We offer for good average quality and prompt shipment 30 cts. per lb. cash, or 32 in trade, delivered at Medina. Shipments from the Pacific coast should be in barrels or boxes. From other Western points, pack in double bags to get the most favorable rate. Be sure to mark the shipment so it can be identified when it arrives, and send us a shipping receipt with a statement of gross, tare, and net weight shipped. This is important as it gives us something to check so as to determine whether any has been lost in transit.

The A. I. Root Company
Medina, Ohio

When Ordering Supplies

remember we carry a full stock and sell at the lowest catalog price. Two lines of railroad—Maine Central and Grand Trunk. Prompt service and no trucking bills.

HOW TO KEEP BEES

By ANNA BOTSFORD COMSTOCK

THIS is an excellent book for the beginner. Nothing better. We cordially recommend it to all who are learning beekeeping by their own effort. Having commenced beekeeping three times, the talented author is in a position to furnish the right kind of advice. You can not go wrong in ordering this book. It is charmingly written and easily understood. Price \$1.10 postpaid by

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

A. I. ROOT

POULTRY MUSTARD VERSUS MUSTARD BRAN FOR CHICKENS.

A year ago we made mention of mustard bran for chickens, costing only about a fourth as much as ground mustard; but since then we have been assured by the R. T. French Co., manufacturers of mustard, that real mustard bran is of little or no value for chickens. Corning made mention of it in his book because he got hold of some bran that was imperfectly cleaned, containing enough mustard to make it of some value. Since then I have seen a letter from Corning saying they had changed from mustard bran to the ground mustard prepared for poultry by the French Co. This poultry mustard is the same thing as the mustard of commerce, except that they do not go to the expense of getting out every particle of the bran, which would make it much more expensive. This explanation is made so that our friends may not make a mistake in purchasing the bran, which, I am told, is sometimes sold as low as 1 ct. per lb.

TOBACCO ADVERTISEMENTS, ETC.

While we are urging and insisting that our daily papers in the great cities shall cut out advertising of any intoxicating drinks, it may be undertaking a little too much, all at once, to attempt in a like manner to say that tobacco advertisements shall be regarded in much the same light. About a year ago

I asked the question whether our Ohio boys should be instructed in growing tobacco by our Ohio Experiment Station. Director Thorne replied that, while he agreed with me in the main, so long as so many of our public men continue to use tobacco it would be a hard matter to stop it. But so far as I know, no tobacco experiments have ever been made at our station at Wooster. It is true, however, that a branch station in the southern part of the State has been making a test, and has sent out a bulletin in regard to growing tobacco.

Well, what brings this matter before me just now is this: The editor of our *Medina Gazette* has to my knowledge recently turned down a tobacco advertisement that would have given him \$530 for the space occupied. I suppose there are more editors who are doing much the same thing—more than, perhaps, anybody knows about. May God in his infinite love and mercy give them their just reward. It may look pretty hard, many times, to lose so much money when it is sadly needed to keep up the finances. But let these good brothers remember the promise, "Be not weary in well doing, for in due time we shall reap if we faint not."

THE ONLY CORN MAGAZINE IN THE WORLD. CORN.

The above is the title of a beautiful magazine, published by the Corn Publishing Co., Waterloo, Ia. It is not only beautiful but useful. My impression is that each of the two numbers, May and June, that have been submitted to me, are worth a dollar, as that is the price of the magazine for a year. If you whose eyes meet these pages do not know what is being done in growing corn in these latter days, you ought to know. If you raise only a little piece of sweet corn in your garden, you ought to have this magazine; and if you grow an acre of field corn you certainly ought to have *Corn*. And if growing corn is your business, the magazine may be worth a hundred dollars to you. I suppose all the world knows what the boys of our land are doing in the way of growing corn.

Among the beautiful pictures in this corn magazine is one of the corn boys—a great lot of them. One of them has actually grown 135 bushels on a single acre, and this magazine tells how he did it. If a boy can do it, why can not you? Don't you think that we old gray-headed chaps ought to be ashamed of ourselves if, with all our past experience and observation, we are not able to do as well as a boy sixteen years old, for that is what this boy, Arthur Hoese, did in Central Minnesota.

Now, do not imagine that the girls are ruled out. The women of our land are fast demonstrating that they can do almost any thing that a man can do, and "then some." In a like manner we are beginning to comprehend that a girl in her teens, when she is well woke up, can give her mother some lessons that her mother never dreamed of. May God be praised, not only for our boys and girls, but for what the boys and girls are just now accomplishing. These corn-growing boys are not the kind of boys who pay out their nickels for beer, and I do not believe they waste many nickels at the soda-fountains either. God speed them.

THE "SOLOMON'S ISLANDS GOURD," OR SO-CALLED "GUADO BEAN."

For a year or two back I have seen mention made of the "Solomon's Islands gourd" in tropical periodicals; but the claims made for it were so extravagant I passed it by as a fraud, and I can only remember that the claims made for it were that it is a sort of bean or gourd, or something half way between a bean-pod and a gourd. And this vegetable, or whatever you call it, will sometimes grow six feet long—that is, the fruit itself is six feet long, and that they average about a yard in length. They are good for food, and half a bean-pod or less will make a meal for a "whole family." I threw the paper aside, and so I recollect only a very few claims that were made for this fruit. But the matter was revived when I received a letter from one of our friends down in Texas that reads as follows:

I am inclosing you a clipping from a San Antonio paper; and as you are always interested in new things I want you to read about this great Australian vegetable. I am sending for eight seeds to-day, and thought of you and your write-up in GLEANINGS of the dasheen and other vegetables.

Laredo, Texas, April 4. HENRY BORCHERS.

I at once wrote our friend that if he succeeded in getting me some seed I would gladly pay him 50 cents for a couple of them; and I am happy to tell you that on June 21 they came to hand. The seeds somewhat resemble those of the squash, but they have a peculiar shape, somewhat different from any thing else. They were planted promptly, and in just about ten days one of them was up, and is now, July 7, growing quite rapidly. I am afraid the frost will catch mine here in Ohio before the great long fruit is fit to use; but I am going to push it with all my skill. If any of the readers of GLEANINGS can tell me any thing more about this Solomon's Islands gourd, I should be glad to get it. The clippings our friend refers to were returned or I would give place to them here. Is it not possible that this is another of "God's gifts" to this world of ours?

We have already an ornamental bean in Florida with pods over a foot long; but I am told it is of no value except for the immense flowers it produces.

DASHEEN TUBERS FOR SALE, ETC.

In the department of Special Notices in our last issue I copied an advertisement of the Crenshaw Brothers' Seed Co., of Bradentown, Fla. I have just now learned from them that they have been obliged to advance the price of the bulbs to 30 cents a quart; and I presume it will be too late to try growing them here in the North before another season. Below are the directions they send out:

DASHEEN A RIVAL TO THE POTATO.

Dasheen is a staple article of food in the tropics. It is related to the ornamental caladium, or elephant-ear, the taros, and to the semi-wild taniar of the Southern States. Its tubers are similar in composition to the potato, but much drier, containing about ten per cent more starch and from fifty to sixty per cent more protein. The flesh of the large tubers is usually grayish violet color when cooked, but this does not affect the flavor. Dasheen should always be cooked before using. When properly baked and served, it is meaty, having a flavor richer than that of the white potato—more suggestive of boiled chestnuts.

CULTURE.

The dasheen requires rich, moist, and well-drained sandy soil. For best results mix a liberal amount of well-rotted stable manure with the soil; if very sandy it is a good idea to add some potash. Planting should be done as early in the spring as possible so as to give the tubers ample time to mature, as it requires from five to six months. Plant the tubers from two to three inches deep, in hills about three feet apart, rows four feet apart. Keep free from weeds, and work the soil toward the plant.

Harvesting should be done before frost, and the tubers should be allowed to remain in the sun several days so as to become thoroughly dry.

REDBUGS, ETC., UP TO DATE.

During the past winter, and along in March and April, the redbugs were unusually bad in our Florida home. About the same time, by some mishap, chicken lice got among some of our sitting hens; and the two together for a time called for much patience and humility. When Mrs. Root asked if my faith was bright enough and strong enough to say, "I am glad to see them," as I said about the squashbugs, I replied that I believed that Providence had sent them in order that I might have a real close acquaintance, and thus be enabled to tell the friends through GLEANINGS how to wage a successful warfare. I wrote to the Florida Experiment Station, but did not get much help. I then applied to the Bureau of Entomology, at Washington, and was rejoiced to get a pamphlet of six pages picturing the little "animal," and giving

very full directions. The title of the bulletin is "Harvest Mites, or Chiggers." From this pamphlet I make the following extracts:

The mites naturally attack first those portions of the body which are most exposed—those nearest the ground. They crawl into the stockings and penetrate the skin about the ankles, frequently below the shoe tops, and are usually found most numerous below the knee. According to the late Dr. John Hamilton, a physician as well as entomologist, the harvest mites enter the larger sweat tubes or pores of the skin; and as these tubes are very tortuous, the progress of the mites is necessarily slow, from eighteen to thirty-six hours being required for them to reach the end. When the lesions caused by these mites are unusually numerous, the sufferer becomes feverish, and sleep is much disturbed. Sometimes the afflicted one becomes frantic, and lacerates his flesh by too vigorous and frequent scratching. Erysipelas is known to follow severe attacks, and death resulting from blood poisoning is recorded. These more serious results of infestation are, however, exceptional, and, as with the fatalities which in rare cases follow the ordinarily merely painful or annoying "bites" of many insects, undoubtedly point to an impurity of the blood.

If a bath is taken in hot water, or water containing salt or strong soap, within a few hours after exposure, no ill effects will be experienced. After a longer exposure a bath has practically no effect, and direct remedies are necessary.

Sulphur is a sovereign remedy for mites, and is the best preventive of attack. When exposure is unavoidable, and where vegetation is not more than 2 or 3 feet high, a sure preventive is found in sifting flowers of sulphur into the underclothes from a little above the knee downward and into the shoes and stockings, or it may be rubbed over the legs and ankles. Naphthalene has been successfully used in the same manner in Mexico by Dr. L. O. Howard, and in Cuba by Mr. E. A. Schwarz. While the sulphur, being inodorous and perfectly effective, is undoubtedly preferable against harvest mites alone, naphthalene is a safeguard against various forms of man-infesting tropical insect pests. Vaseline, pure or mixed with sulphur, will serve the same purpose, but is not so agreeable on account of its oily nature and the certainty of its soiling the clothing.

Professor Rolfe, of the Florida Experiment Station, informs me that the sticktight flea, often called "chiggers" (that troubled our grown-up fowls by getting on their combs as well as getting on people) within two or three years have almost entirely disappeared. He had not seen one of them for two winters past. My impression is that all these pests, like gnats and mosquitoes, will gradually be eliminated, especially if we go at it understandingly.

I wish to refer to one statement in the government bulletin, to the effect that these things are more annoying and painful where there are *impurities in the blood*. This probably also accounts for the fact that some people are so much more annoyed than others. Get your system into good robust health by eating only two meals a day of good wholesome food, daily baths, etc., and very soon the chiggers, redbugs, and harvest mites will give you a wide berth.

THE REDBUG OF THE SOUTH; SOMETHING MORE
FROM MADELINE PRUITT.

In GLEANINGS for Aug. 1, 1912, p. 499, L. A. Cameron says I'm overdone on the redbug question. When I said "everywhere," of course I meant wherever their natural abode is. I didn't suppose they would be found in water, swimming about like fish, in pecan-kernels, on snow-capped mountains, etc., nor at all times of the year, for they, too, have their season. Neither is it a mistake as to their rearing offspring in the flesh. As to the grease remedy, of course one must apply it as soon as possible, and not delay until the swelling is high, and the insect buried too deeply for the grease to reach its foothold. Nor did I anywhere state that every one was pestered with them. As to the editor's statement about not being bothered with them in winter, there is no doubt about that; for that is not their season. From the last of March, all April, May, June, and late in July, is their main flourishing season. If spring is late and dry they do not appear at all. They abound in most weeds, especially broomweeds and horehound. Then, too, the editor appears to think that I imagine all itches are caused by redbugs, such as hives, summer heat, poison oak, cowage, vine-poison, etc., when anybody should be able to distinguish between them.

Itching sores caused by redbugs are scattered over the body. Single pimples, and in twos and threes, after irritation, become raised white bumps; then, as they progress, a small water blister in the center of the pimple and surrounding flesh is inflamed slightly. After one breaks the blister the place burns, then a scab forms, and each time the scab is removed the sore becomes larger and more irritating until the insect dies and nature causes the flesh to expel the injured particles and carcass. This last is not very scientifically put, but the best I can do. Neither is it a mistake as to their lasting two weeks at times. They frequently last three and four. If no remedy is applied, and scratching indulged, the sores can be made exceedingly painful and of long standing. Of course, town people seldom go out among weeds of any kind, and therefore do not come in contact with them. No one gets drowned if he stays away from water, nor burnt if he stays away from fire.

As to thinking Texas was like what Sheridan describes war, I emphatically deny any such meaning. If it were, a lady could hardly so pronounce it.

Abilene, Texas, March 11. M. E. PRUITT.

SPECIAL NOTICES

By OUR BUSINESS MANAGER.

BUCKWHEAT SEED.

Now is the time for sowing buckwheat. We are provided with a choice lot of seed, both Japanese and silverhull, which we can ship by first train from Medina. Price of either variety, \$1.25 per bushel; \$2.25 per bag of two bushels; 10 bushels, \$11.00, bags included to ship in. Send in your orders.

SWEET-CLOVER SEED.

We have already had a call for price on a carload of sweet-clover seed, and we should like to hear from those of our readers who are in position to furnish any seed, either hulled or unhulled, white. The time for sowing seed is at hand. The weather conditions were unfavorable last year, resulting in a short crop and high prices late in the season. Let us hear from those who will have seed to furnish.

SECOND-HAND CANS.

We still have a plentiful supply of those good second-hand 60-pound cans. While we do not as a rule recommend for choice white extracted honey any thing poorer than new cans, yet these are so good we use them ourselves for our best extracted honey. They are just as good as any for amber and off-grades. Price \$3.50 for 10 boxes; \$7.50 for 25 boxes; 100 boxes or more, 25 cts. per box; two cans to the box, and boxes put in good condition for re-shipment.

Kind Words from our Customers

Please find enclosed one dollar for renewal of my subscription to GLEANINGS, which expires July 1. I have been a reader of GLEANINGS for about ten years, and I have gotten more good out of single chapters of Uncle Amos' Home talks than all the subscription price I ever paid for GLEANINGS.

Lucasville, O., June 22. CASS. SCHOONOVER.

A KIND WORD FOR TERRY'S HEALTH BOOK.

Please renew my subscription to GLEANINGS and send me Terry's book on health. This will make the third book. I wish every beekeeper would buy at least one of these books. This is my second winter since I read the book, and I haven't had to take a drop of medicine since. I haven't even had a cold to speak of, although I have always been subject to colds, grip, and pneumonia in the winter. I am wintering my bees out of doors this winter, and they have come through very strong, but are short of honey and pollen. I am informed that bees are starving to death where neglected.

Warsaw, N. Y., March 26. W. W. SHERWIN.

POTATOES, 16 QUARTS TO THE HILL.

Your A B C potato book came in due time, and I read it through at once. It was very interesting to me, but Mr. Root's narrative about Bermuda Island is a tame affair compared to the climate, scenery, and productiveness of the soil here on Brewster Flats, Washington, U. S. A. I dug hill after hill of potatoes this year, 1912, each hill filling a 12-quart pail heaping full of good-sized potatoes. This was just a common thing; and the preparation of the soil and cultivation were almost nothing compared to what is done in Bermuda Island or what Mr. Terry did.

Mr. Terry's writings are so sensible, practical, and interesting on potato culture that I am enclosing the price, as I find it in GLEANINGS, for his book, "How to Keep Well and Live Long."

Brewster, Wash., Nov. 10. V. W. CLOUGH.

BEEKEEPERS AS A RULE SEEM TO BE "AN EXCEPTIONALLY CLEAN, KINDLY, AND UPRIGHT BUNCH OF MEN," ETC.

Returning to the subject of GLEANINGS, allow me to confirm what I hear from so many others, that the fraternity of beemen seems to be composed of an exceptionally clean, kindly, and upright bunch of men. Especially am I among that number who so frequently express themselves as indebted to A. I. Root. Nor is this expression merely complimentary or formal. I am at a loss for words to say just how Mr. Root's writings have helped me toward truly better things more than almost any thing I have read in years. If Mr. Root is like his writings, and I believe he must be, he really has religion, which, though it exists, is none too plentiful; and because it is close to the real thing it is "not puffed up," and does not "exalt itself unseemly."

Pellston, Mich.

J. D. ROBINSON.

FROM "KIVER TO KIVER."

I sent you one dollar for subscription on Feb. 13. May be this was over due; any way, here's another, as I find GLEANINGS interesting from "kiver to kiver." This is my second season, as I started last year with a three-frame nucleus and have now three colonies, and shall soon be able to write "Pitfalls of Beginners." As the old boatman said when some one asked if he knew the harbor rocks, "I'd order—been on every one." I am also going to tell you about "Katherine," my White Leghorn, with a record of two hundred and, and—well, frankly, I'm afraid to say, as a certain one might lay aside his prescribed teaspoon long enough to call me a favorite epithet. Her daughter's records were more believable, and her granddaughters are still "in the making."

The wind is getting around into the East, and I am hoping, as we need rain badly. As the negro parson said, "May it fall upon the just and the unjust; but, O Lord, let it fall heavier upon the latter. Yes, dear Lord, soak 'em!"

New Rochelle, N. Y., June 25. H. L. LOOMIS.

SPECIAL SALE!

Root's Goods Below Our Cost

Beekeepers will change their minds and use different kinds of supers all of a sudden. Our trade used, before section-supers, shipping cases, etc., while now nearly every beekeeper in our locality produces bulk comb honey, which, consequently, leaves us with a big stock of section supers on hand, which we are willing to sell very cheap just to dispose of them. They are all in the original packages, just as we received them from the factory, and there is absolutely nothing the matter with them, only we have hardly any more sale for them in our locality.

70 2 I-8.....	.37 each	60 2 P-8.....	.37 each
25 4 I-8.....	.50 each	100 4 I-10.....	.55 each

HONEY-CANS

As in previous seasons, we have prepared a very large and complete stock of honey-cans in our warehouse, ready for immediate shipment to you. Our honey-cans this season are the product of the largest independent can-manufacturing company in the United States, and are warranted to be the best grade possible to procure. Every can and case is fully guaranteed to give absolute satisfaction. The boxes are of the very best material that can be obtained for packing honey-cans, being strong and substantial, and securely nailed with cement-coated nails.

Prices quoted on application. Full line of Root's Beekeepers' Supplies always on hand.

PRINTYPE

Receives the Plaudits of the Public

Vigilant Protector of People's Eyesight Hailed as a Benefactor by Many Thousands of Enthusiastic Admirers. "Officer Printype" Responds with Becoming Modesty.

Officer Printype says: "I am overwhelmed by the ovation which has greeted my appearance in your midst. I am simply doing my sworn duty 'n ridding the Business and Financial Districts of the Bad Characters that for years have made Typewriters a menace to your eyesight. I have mercilessly exposed and relentlessly pursued these dangerous Typewriter Types, which are responsible for more cases of Defective Vision than all other causes combined.

"Report direct to my Headquarters, in the Oliver Typewriter Building, Chicago, any machine whose type is violating the Optical Law and I'll have the offender haled before the Court of Public Opinion."

Printype — **OLIVER** Typewriter

Printype is owned and controlled exclusively
by The Oliver Typewriter Company

America rings with praise and applause for Printype. This superb new typewriter type has attracted more attention than any typewriter innovation brought out in recent years.

Hundreds of thousands of people have seen this new type and wondered what it was that made Printype Correspondence seem like a spoken message. There's virility, strength and charm in Printype correspondence. There's refinement and "class" and style.

Not because of its novelty—it's inherent in the type!

A Vast Improvement

Printype is designed in shaded letters and numerals, like the type in which books and magazines are printed. It is book type transformed and adapted to modern typewriter requirements.

This radical departure from the old style "outline" letters makes it possible to produce on The Oliver Typewriter a page of manuscript as clear and attractive as that of the finest book. The Oliver is the first and only typewriter that successfully prints print!

The Primary Reason

Printype resulted from our discovery that "outline" type, with its sameness, due to absence of shading, was harmful to the eyes.

The Silent Test

For months, without any advertising, we put hundreds of Printype Oliver Typewriters into actual service, in many diverse lines of business. We wanted the public's verdict. It came in a burst of admiration and a flood of orders that proved Printype a brilliant success.

Printype letters, wherever seen, excited the keenest interest. Business men who received their first Printype letter almost invariably answered post haste—"Where did you get that type?" Thus Printype captured the country without firing a single shot.

Price Not Advanced

The Printype Oliver Typewriter sells for \$100. You can pay at the rate of 17 cents a day. The "Printer" is our latest and best model. The new type adds 25 per cent to the value, but not one cent to the price. A small cash payment brings the machine. (248)

ROOT'S BEEKEEPERS' SUPPLIES . . .

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequent letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1912.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in the line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

Gleanings in Bee Culture

VOL. XLI. AUG. 1, 1913, NO. 15.

Bees by the Pound

**Safe arrival guaranteed to any point
within five days from Medina, Ohio.**

We have finally perfected our pound packages so that we are now able to ship bees without combs to almost any point in the United States and nearby points in Canada without danger of transmitting bee disease of any sort. Half a pound of bees is nearly the equivalent of a two-frame nucleus; one pound, to three frames; two pounds, to six frames; three pounds, to an ordinary colony such as may be sent by express. The express on these pound packages is only about a quarter of the express on the equivalent value of bees when they are sent on combs. We shall be ready to ship bees in pound lots from Medina, with 600 colonies to draw from, by the first of June, at the following prices, without queens: Half-pound package, \$2.00; pound package, \$3.00; two-pound package, \$5.00; three-pound package, \$6.00.

Through July, and on throughout the season, the prices without queens will rule as follows: Half-pound package, \$1.00; pound package, \$1.50; two-pound package, \$2.50; three-pound package, \$3.00.

If you want queens with the pound packages, add the price of the queen selected to the price of the bees.

Express on half a pound of bees with queen, within 300 miles of Medina, will be approximately: One pound, 38 cts.; two pounds, 45 cts.; three pounds, 57 cts.

NOTE.—We can not ship bees by parcel post other than a queen-bee and a dozen or so attendants.

We have so perfected our cages for shipping bees in pound lots that we now feel for the first time that we can guarantee safe arrival at the prices named above, where bees are not on the road more than five days. As a general thing they will go through in good condition, even when out more than six days; but for the present, at least, we do not feel like assuming a greater limit than five days. Our guarantee means that, if bees fail to go through alive, or if they go through in bad order, we will either replace the shipment or send enough more bees to make up for the loss at our own expense, or refund the money. Orders will be filled in rotation after the first of June. Send in your orders now, and thus insure early delivery.

In addition we guarantee to give full measure of bees by weight. Half a pound will contain from 2200 to 2500 bees, and larger packages in proportion.

PRICES OF QUEENS.

Untested.....	July to October, \$1.00.
Select untested.....	July to October, 1.25.
Tested.....	July to October, 2.00.
Select tested.....	July to October, 3.00.

Untested Home-bred Queens in Quantity Lots in August and September.—During August and September we are prepared to name very low prices on large quantities for requeening. Prices depend on supply available, and quoted on application.

Send all orders to the home office of The A. I. Root Co., Medina, Ohio. Orders from the extreme South will be filled from Florida and Texas; those in the extreme West, from California.

N. B.—To get the price of a package of bees and a queen, add the price of the queen selected to the price of the package.

"falcon" Queens.....

Three-band and Golden Italians, Caucasians, and Carniolans

Untested, July 1 to October 1 . . . One, \$.75; six, \$4.25; twelve, \$8.00
 Select untested, July 1 to October 1, " 1.00 " 5.50 " 10.00
 Tested, \$1.50 each. Select tested, \$2.00 each.

All queens are reared in strong vigorous colonies, and mated from populous nuclei. Instructions for introducing are to be found on the reverse side of the cage cover. A full line of bee supplies and foundation manufactured by us at Falconer, N. Y. Write for samples of our foundation and Red Catalog, postpaid.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well-filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—Fancy and No. 1 white comb, 16 to 17; fancy white, 11 to 12. Beeswax, 30.
Boston, July 17. **BLAKE-LEE CO.**

CINCINNATI.—There is very little doing in honey, either comb or extracted. No new honey has yet arrived. General conditions are good for a big crop.
Cincinnati, July 16. **C. H. W. WEBER & CO.**

KANSAS CITY.—The receipts of new comb honey are more liberal, and up to date we have had no trouble in selling upon arrival at \$3.50 per case of 24 sections for No. 1 white and \$3.00 to \$3.25 for amber. We quote white extracted at 8 to 8½. Beeswax brings 25 to 28.

C. C. CLEMONS PRODUCE CO.
Kansas City, Mo., July 15.

ALBANY.—We look for a high market on comb honey. Some of our shippers report a very short crop of clover. With all the old honey cleaned up, both comb and extracted, we can handle the new to good advantage. We have had a number of calls for new honey; but at present we know of no shipment on the way.

Albany, N. Y., July 16. **H. R. WRIGHT.**

INDIANAPOLIS.—A bounteous crop has been secured, but very little honey is moving at this date. Much honey is being offered by producers, but they do not name prices. I presume we shall have an established schedule of prices within the next two weeks. Beeswax is in good demand, and producers are being paid 30 cents cash or 32 in trade.

WALTER S. POWDER.
Indianapolis, Ind., July 16.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the stungum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Honey reports continued from page 2.

CHICAGO.—Receipts have been quite free for this season of the year, both in comb and extracted. The market is not active; but the quality of the honey is excellent. Prices are ranging for A No. 1 to fancy comb at 16 to 17; extracted, 9 to 10 for the clover and lindens. Amber grades and other white grades bring 7 to 8. Beeswax is steady at from 30 to 32, according to color and cleanliness.

R. A. BURNETT & Co.

Chicago, Ill., July 18.

DENVER.—Very little new comb honey is in sight in this State. We have received a few small lots which we are selling in a jobbing way at the following figures: No. 1 white, \$3.15 per case of 24 sections; choice, \$3.02; No. 2, \$2.88; white extracted honey, 9; light amber, 8; strained, 6½ to 7. We pay 26 cts. in cash and 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION.

Denver, Col., July 19.

CINCINNATI.—Many shipments of both comb and extracted honey are coming in from all directions, and it is the early shipper who will get the best prices this year. Fancy extracted honey is selling in this market at 8 to 9 in 60-lb. cans, and fancy and No. 1 comb honey at 13 to 15, according to the quality and quantity purchased. For choice bright yellow beeswax we are paying 30 cts. delivered here.

THE FRED W. MUTH CO.

Cincinnati, Ohio, July 19.

ZANESVILLE.—While reports reaching us from outside points are rather meager as yet, an old-time honey-flow is still in progress locally, and considerably more than the average amount of honey is being offered by producers hereabout. As there are few really large producers in this immediate vicinity, but little honey finds its way into the hands of large dealers, most of it being taken up by consumers direct or by retail grocers. There seems to be considerable demand of this sort. Indications are for a decline when outside honey comes in on the market. Offerings of extracted are rather in excess of the demand, this being distinctively a comb-honey market. Producers receive for beeswax 30 and 32 in cash and trade respectively.

Zanesville, Ohio, July 19. EDMUND W. PEIRCE.

ST. LOUIS.—The receipts of comb and extracted honey are moderate for the season. There is no demand for comb honey, on account of the prevailing hot weather; but for extracted honey there is a good demand. The quotations for comb honey are nominal. We quote fancy white comb honey at 16 to 17 cts. No. 2 white at 15; light amber, 13 to 14. By the case, fancy white comb honey brings \$3.65 to \$3.75; No. 2 white, \$3.25 to \$3.40; amber, \$2.75 to \$3.10, according to quality. Dark or broken honey is unsalable. Extracted honey, Southern, in barrels and half-barrels, is quotable at 6½ to 6¾; in five-gallon cans, 6¾ to 7. Dark honey sells for less. There is no California, Utah, nor Colorado honey in this market at present. Beeswax is in good demand at 32 cents for prime. Inferior and impure sells for less.

R. HARTMANN PRODUCE CO.

St. Louis, July 17.

NEW YORK.—There is no new nearby comb honey on the market as yet. Some few shipments have been and are arriving from the South, and are selling at from 13 to 16, according to quality and style of package. Of course, it is rather early as yet for us to expect to have new-crop comb honey from New York State and near by, and it may be a month from now before we receive the first shipments. In fact, the season is not over as yet; and from reports we are daily receiving, basswood seems to be now blooming, and promises a fair crop. There is a fair demand for extracted honey, principally new crop from the South, common grades selling at from 65 to 70; choicer grades at from 75 to 85, and sometimes 90 cts. per gallon. Old-crop California is well cleaned up, and we do not expect new crop from there until next month. Beeswax is steady at 31 to 32.

New York, July 17. HILDBRETH & SEGELKEN.

An Evidence of Good Service

The fact that the Savings Deposit Bank renders good service is best evidenced by the fact that it serves people in all parts of Medina county and all over the country. People living at a distance appreciate the careful manner in which we handle their banking business, and they forward their deposits to us by mail, checks, drafts, money orders, or registered letters.

RUSH ORDERS

BY MAIL.—Has your "forgettery" been working? And right this minute you need foundation or other items. See page 1 of our catalog, and it gives parcel-post rates on various articles.

BY EXPRESS.—Larger shipments than can go by mail we can rush out at once. Parcel-post and express orders receive our first attention.

BY FREIGHT.—Our rule is "ship same day the order is received," and we break it only when absolutely necessary. Notice that Lansing is the railroad center of Michigan from which freight shipments can be delivered quickest.

And we fill all orders with Root's goods. Just remember that too. Send for catalog. Beeswax wanted.

M. H. HUNT & SON, LANSING, MICH.

OPPOSITE LAKE SHORE DEPOT.

BEEKEEPERS, ATTENTION!

If you have any extracted or comb honey to offer, send us samples of quality; state quantities, and now packed. We pay the highest market price for the same. We are paying 31c cash for nice, bright, clean beeswax.

"Griggs is always on the job."

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

When you are in urgent need of bee supplies you will likely consider two details—quality and promptness. For about a quarter of a century I have handled the Root quality of goods, shipping from Indianapolis at the factory schedule of prices. I believe it is generally admitted that as to material, workmanship, and accuracy, their equal is not to be had elsewhere. An immense stock on hand at all times, and no old or inferior goods offered at any price. Nearly every order is filled within a few hours after arrival, and you will agree with me that this feature is the finest advertising that I have ever been able to place on my house. We have so many railroads and express companies at our command that shipping promptly from here is not a hardship. The parcel post is a boon to all of us, and these packages are taken up by Uncle Sam three times a day.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and I should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.
873 Massachusetts Avenue

"By Airship"

A customer writes, "You must have sent my last order by airship, it got here with such lightning speed."

Handicapped by a flood loss that necessitated an entirely new stock just at a time when the Root factory was crowded with orders, it has taxed my resources to the utmost to maintain my reputation for promptness in the delivery of supplies. The most active season for a number of years has made the task doubly difficult. Possibly a few customers may have been inconvenienced at the outset. I am glad to say, however, that my stock is now practically complete, and new goods are arriving right along. With the better facilities of my new location, and additional help for the remainder of the rush season, I feel that all customers, old and new, will be served here with as little delay and as great satisfaction as would be possible anywhere.

BUCKWHEAT QUEENS

"IF GOOD QUEENS ARE WANTED QUICK, SEND TO HOLLOPETER"

The VERY BEST ITALIAN QUEENS can now be had by return mail at LOWEST PRICES.

Situated in the BUCKWHEAT belt, in August ideal conditions exist under which to rear the best of queens at low cost. Using the best domestic and imported breeders selected for hardiness, prolificness, producing good workers, gentle, and disease resistant; well-fed queen-cells grown in populous two-story queenright colonies; when ripe, placed in three frame nuclei, where young queen hatches, mates, and stays until sold. No better queens can be produced.

Queens that have Made Good.

From Maine to California, from Canada to the Gulf, hundreds of our Queens have gone, and given satisfaction to those who received them. "Blood will tell." See page 10, July 1, GLEANINGS. One of these vigorous young queens at the head of every colony insures against winter loss, spring dwindling, poor seasons, or failure. Pure mating, safe arrival, and satisfaction guaranteed.

PRICES.—Select Italians only, untested, 75c; six for \$4.00; 25 for \$15.00. Tested, \$1.00.

Six extra select tested, year old, for breeders, \$3.00 each.

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE. By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 THE BEEKEEPER AND FRUIT-GROWER. A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 CATALOG OF BEEKEEPERS' SUPPLIES. Our complete catalog will be mailed free to any address on request.
- 7 SPRING MANAGEMENT OF BEES. A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oft-times perplexing matter. Price 10 cts.
- 8 HABITS OF THE HONEYBEE. By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 HOW TO KEEP BEES. A book of 228 pages detailing in a most interesting manner the experiences of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 THE A B C OF BEE CULTURE. A complete encyclopedia of bees, of 576 pages, fully illustrated, \$2.00 postpaid; half leather \$2.75.
- 11 GLEANINGS IN BEE CULTURE. A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 BACK-YARD BEEKEEPING. Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 THE BUCKEYE BEEHIVE, or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 ADVANCED BEE CULTURE. A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted, and adding your signature, and remittance, if required.

W. H. LAWS

is again ready to fill your orders for queens the present season. Law's Red-clover Italians are as good as can be had.

One firm who bought over 1100 queens from me in 1912 says, "Your queens are very satisfactory." We are booking orders now, and we are going to do our level best to mail all queens by return mail when so ordered. My bees are absolutely clean and free from all disease.

Queens sent out under the usual guarantees. Prices: Single queen, \$1; six for \$5. Breeding queens, none better, each, \$5.

W. H. LAWS, BEEVILLE, BEE COUNTY, TEXAS

Famous Italian Queens!

from the Apiaries of
WALLIN & CORLIS

have won a world-wide reputation for prolificness, hardiness, gentleness, and honey-gathering. Our queens are reared scientifically from breeders perfected by years of elimination. We have the famous Moore strain of Italians, and are giving every care to the perfection of cells and mating.

Satisfaction and safe arrival guaranteed.

Circular free.

Untested, 75 cts.; dozen, \$8.00.

WALLIN & CORLIS

Brooksville, Ky.

Miller's Strain of Red-clover ITALIAN QUEENS

By Return Mail or order returned

Bred from superior breeders for business; gentle; no better hustlers; bees roll honey in; three-banded; Northern-bred; hardy and vigorous; winter well; not inclined to swarm; bred from best leather-colored strains. Untested, 75 cts.; six, \$4.00; dozen, \$7.50. Select untested, \$1.00; six, \$5.00; dozen, \$9.00. Satisfaction guaranteed.

Isaac F. Miller, a queen specialist and breeder for sixteen years, previously of Brookville, Rt. 2, Reynoldsville, and lately of Oil City, Rt. 2, Pa., is agent and breeder for E. L. Miller. Send all orders to

I. F. MILLER, Rt. 2, Brookville, Pa.

ITALIAN BEES AND QUEENS

Extra fine, warranted, tested queen, \$1.00; untested, 75 cts.; three-frame nucleus, with queen, \$2.75. Full colonies in eight-frame Dovetailed hives, \$5.50. Try me for rush order.

J. L. FAJEN, . . . S OVER, MISSOURI

LINE-BRED CARNIOLAN Queens!

Carniolans are good winterers - prolific, gentle, enter supers readily, and excellent honey-gatherers. Untested, \$1.00; dozen, \$9.00. Tested, \$1.50.

CARNI-ITALIAN QUEENS

A cross between the Italian and Carniolan. Most excellent honey-gatherers, but not so gentle as Carniolans. While they last, 90 cts. each; dozen, \$8.00.

Bees by the pound through August. Ask for prices.

ALBERT G. HANN, PITTSSTOWN, NEW JERSEY
Carniolan Queen Breeder

QUEENS AND BEES

An improved superior strain of Italians is what QUIRIN RAISES. Our stock is Northern bred and hardy—all stock being wintered on summer stands.

We sent fifty nuclei to J. D. Nixon, of Lafarge, Wis., and July 20th (of same year) he wrote us saying they did just splendid, as at that date they had already filled their supers, and that he would have to extract them. We have files of similar testimonials.

FRENCH'S POULTRY MUSTARD

**Used and Recommended by
the Most Prominent Judges
and Breeders in the United
States.**

The London *Feathered World* says,
"Poultry Mustard not only increases
the egg yield but improves fertility."

Send us your name and address and we will
send you, free of charge, a copy of a pam-
phlet edited by Ralph Allen, of Herts, Eng-
land, the conductor of the original English
experiments with mustard. The book con-
tains a full account of these experiments, to-
gether with testimonials from some of the
most prominent American users of French's
Poultry Mustard.

The time to begin the use of French's
Poultry Mustard is at the very begin-
ning of the moulting season. At this
time its results are most valuable.

BEESWAX WANTED!

Recent demand for comb foundation
has been good, and our stock of bees-
wax is running low. We offer for good
average quality and prompt shipment
30 cts. per lb. cash, or 32 in trade, de-
livered at Medina. Shipments from
the Pacific coast should be in barrels
or boxes. From other Western points,
pack in double bags to get the most
favorable rate. Be sure to mark the
shipment so it can be identified when
it arrives, and send us a shipping re-
ceipt with a statement of gross, tare,
and net weight shipped. This is im-
portant as it gives us something to
check so as to determine whether any
has been lost in transit.

The A. I. Root Company
Medina, Ohio

. . . ROOT'S . . . POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving
machines. With the difficulty of getting competent help, the
power extractors are being sold largely in this and foreign
countries, and the present demand is far greater than ever be-
fore. Read what a California producer says in a letter to a
disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root
Automatic extractor, as I believe it is as near perfection as can be. This machine runs
so easy that a few turns to get it up to speed is all that is necessary; and the men,
while using the No. 17, which I formerly had, could average only 1000 lbs. per day,
while with this machine they can average 2000 lbs. with but one additional man. No
apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such
a satisfaction, and financially to the honey-producers' interests.

Elk Grove, Cal.

J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1913; beautiful, hustling gentle workers. Send for price list.
E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

By OUR BUSINESS MANAGER.

SWEET-CLOVER SEED.

We want to hear from those who are saving white-sweet-clover seed, and will have some seed to sell. Let us know about how much you can furnish, and what you ask for it.

A FREE BOOKLET ON BEES.

Those who are starting little apiaries will be interested in our little book, "How to Build up an Apiary with One Pound of Bees." This will be sent free of charge to anybody applying for the same. Even if you do not buy any bees it will be worth while to read it.

HIGH-GRADE QUEENS AT REDUCED PRICES.

We are catching up on orders, and if some of our customers will allow us the option of mailing when we have a surplus of queens we will make a very low price on queens in quantities; dozen, fifty and hundred lots. This stock is the very best we raise, from our choicest breeders, and all home bred.

SECOND-HAND 60-LB. CANS.

If in need of good cans cheap, do not forget that we have a good stock of extra choice second-hand cans, two in a case, which we are selling at \$3.50 for 10 cases; \$7.50 for 25 cases; 100 or over at 25 cts. per case. If you do not find them free from rust on the inside we will replace any so found. They are excellent value for the money.

BARGAINS IN COMB-HONEY SHIPPING CASES.

We have a number of shipping cases of pattern which we no longer make, which we can ship promptly at special-bargain prices to close them out. We have the largest number of two-row cases for 12 and 16 sections. If interested, send for special list. We also have a lot of used cases nailed up in good condition, which would be a bargain to some one. Let us know if interested, and what size of section you want to case.

SPECIAL BARGAIN IN 10-LB. FRICTION-TOP PAILS.

Through misunderstanding an order, we have to dispose of at Fayetteville, Ark., a supply of 10-pound friction-top pails, six in a case. We sell these regularly from Chicago, at 65 cts. a case. We offer them f. o. b. Fayetteville, Ark., at the same rate, ten cases for \$6.25, or twenty-five cases for fifteen dollars. This will be an advantageous price for those located in the Southwest who can use them, as the freight from Fayetteville should be less than from Chicago. They are offered as above, subject to previous sale.

ONE-POUND ROUND JAR.

Among the honey-jars listed in our catalog there is none more handsome than the one-pound round shown above. It is also the cheapest one in the whole list. We supply them in corrugated-paper reshipping cases of two dozen each, at 80 cts. per case; 6 cases for \$4.50. They weigh 18 lbs. per case, and ship safely in these paper cases. We have a pretty good stock of these here and at our branch stores.

SIMPLEX JAR.

This jar, which we have handled for years, will not be supplied after our present stock is exhausted. The factory which made them has discontinued them and closed out its stock. We still have several hundred cases which we shall be pleased to furnish, as long as they last, at \$1.10 per case of two dozen, \$6.30 for six cases.

SPECIAL NOTICES

A. I. ROOT

DASHEEN HIGHER THAN A MAN'S HEAD 90 DAYS AFTER PLANTING.

When I got the five bushels of dasheen seed, already mentioned, I sold a peck to each of four neighbors, right and left; and I told each one of these four neighbors to see who could make the best report. Well, one of those neighbors, Mr. Ault (a beekeeper), has dasheen already higher than his head—at least so Mrs. Ault writes Mrs. Root. Now if these were planted the first week in April (and it certainly was not earlier than that), and were higher than his head the first week in July, that makes a pretty good record for 90 days, and the seed was not first-class either, as I have already explained. It did not compare in soundness and firmness with what I received from the Department of Agriculture. I have not heard from the rest of the neighbors who had a peck apiece.

MAKING THE FARM PAY.

The above is the title of a very pretty cloth-bound new book of 300 pages. It is a brief *resume* of almost all lines of general farming, even including bees and poultry. There may be an objection raised because the book tells of the possibilities of growing various crops as well as bees and poultry; but as a general rule I think their statements present a pretty fair showing of what may be done by a live man or woman. It was written by Mr. C. C. Bowsfield, and is published by Forbes & Co., Chicago. The price is \$1.00. The publishers make the brief statement, "This book is published in the hope of assisting farmers to improve their position." It may be worth many times the price to any one who will study it carefully and thoroughly.

Below is the statement which I confess is a surprise to me. I am sorry the author did not tell just where he secured such a yield of honey from buckwheat. I copy as follows:

"I have a yard of bees which worked in a field of buckwheat containing about 10 acres. No other buckwheat was within reach of them. They brought in over \$200 worth of buckwheat honey from this small field. This is an average of over \$20 per acre. The flow of basswood honey, secured almost entirely from the yield on an adjoining farm, netted several hundred dollars. These yields may surprise many, but they are not excessive. I have, during an exceptional year, secured a yield treble the above from buckwheat, and have harvested a crop of \$480 worth of honey from a basswood grove of less than 10 acres. Honey represents one of the largest crops, and nine-tenths of it is allowed to go to waste. It might be harvested at less expense than any other crop produced. The reason why farmers have not kept abreast of the times in beekeeping is hard to find."

POTATO-GROWING IN FLORIDA; OVER A QUARTER OF A MILLION BUSHELS SHIPPED FROM ONE STATION.

Friend Root:—After reading your potato article (p. 277, April 15), I wanted you to know what they do at Hastings in the way of growing potatoes, so I took the matter up with Assistant General Freight Agent J. F. Mead, whose reply is attached. Hastings is the potato center; but there are many other towns that grow large quantities. So you see Florida grows some Irish potatoes. By the way, we furnish lots of seed for Hastings growers, and a Hastings man goes north each summer and grows our seed.

Our rains have started, and every thing looks refreshed after our dry season.

Bradentown, Fla., June 27. S. C. CORWIN.

My dear Mr. Corwin:—Your letter of June 19 regarding movement of potatoes from Hastings, Florida, is at hand. I beg to advise that the season began this year April 10, and closed May 25; and, according to our figures, they moved 106,590 barrels (266,475 bushels) from Hastings proper, loading 166 barrels (10 pecks to the barrel) to the car.

I am very glad to know that you have done such a handsome business over your dock this season, and hope for your continued success. I have been trying

to make a trip on the Manatee River for some time, with the view of calling upon you and renewing our old friendship; but they have kept me so busy this winter I have been unable to make this trip. I contemplate doing so this summer, however, and hope to have the pleasure of having a good long chat with you.

JAMES F. MEAD, Asst. Gen. Freight Agent.
Jacksonville, Fla., June 24.

EGGS AND JERSEY MILK IN FLORIDA.

We see in the last GLEANINGS what you say about your Florida neighbor's Jersey cow's milk. You no doubt will remember us. Yourself and your son Huber stayed with us at Pittsford, Mich., over Sunday when you were on your first trip to Northern Michigan with your automobile. No doubt you will still remember the mammoth clover and the little mule. Well, we came to Florida five years ago, and we find that the cows here do give much richer milk, but not such a big flow. We are sure of the richness, for we tested the milk both in Michigan and in the South. We make lots of butter, for which we get 40 cts. the year round. In the first six months of 1913 we sold over 1000 dozen eggs, not any less than 20 cts., and up to 40 cts. a dozen. Mr. Root, if you think of it, get some of the L. & N. literature about West Florida, and you can then get some idea of the work we have done since we came to Florida. The L. & N. will have them ready by fall. Any thing you write about Florida is interesting to us, for we have come to stay.

Pensacola, Fla., July 14. O. W. JEFFERSON.

WOMEN DOCTORS FOR WOMEN.

Dear Mr. Root:—In Our Homes on p. 671, Oct. 15, 1912, you mention a doctor who always insists on young female patients being accompanied by a chaperon. Don't you think the trouble could be overcome by having lady doctors? I have always been an advocate of this reform, and it is coming; but you could give the movement a boost if you thought as I do. Is not the examination of a young girl by a man a shock to her, and does it not tend to destroy that jewel in a woman's diadem—her modesty? There would be hardly any male practitioners attending women if it were not for their efforts to prevent the lady doctors getting into the ranks. In the name of common decency, is it not time the fathers of the land take a hand in the movement?

MAJOR SHALLARD.

Woodburn, N. S. Wales, Australia.

My good friend, I have often said the same thing in substance to Mrs. Root; and since woman suffrage has gained ground so rapidly, I think we shall very soon have more women doctors than we have already. Let a man and his wife both study medicine. Let the men take charge of the men and boys, and the good wife attend, so far as she can, to the women, and especially the girls. Of course the husband would, perhaps, be frequently called into counsel, and *vice versa*; but during my brief life I have again and again run across the evil resulting from letting a girl go unattended by her mother or sister to a doctor's office. As I suggested before, let the woman treat women, and especially young girls without their mothers, or doctor's wife or some other relative being present. I have just seen mention that the great city of Chicago has

policewomen as well as policemen on the police force, and their business is especially to deal with women who are criminals. May God hasten the day when good motherly women shall be expected to fill various offices which just now only men are deemed competent to hold.

THE KINGDOM COMING.

In the opening paragraph of *Our Homes* for July 15 I reiterated what I have said several times before, that some great world-wide event is just before us. I do not know just how nor in just what way; but God is hearing the prayers of his people, just as he heard their groanings in the land of Egypt in olden times. It looks to me just now as if the coming Moses might be in the form of woman; for where in all this world of ours can we find more of the Christlike spirit than there is in the mothers of our land—the mothers who have long been praying for the safety and welfare of their boys and girls? Read the following, which I clip from the *Plain Dealer*:

WOMEN INVADE IN AUTOS; SUFFRAGISTS, IN HUNDREDS OF MOTORS, TO STORM SENATE.

WASHINGTON, July 21.—Scores of suffragist-laden automobiles are hastening toward Washington bearing petitions to Congress for a constitutional amendment granting universal suffrage; and by the end of this week, leaders of the National Woman Suffrage Association said to-day, these automobiles would be numbered by the hundreds. The Senate and House are to be stormed by the motoring women July 31.

Already a number of State parties of women are on their way here awheel. An official announcement says that delegations are now on the road from Montana, Tennessee, Virginia, New York, Massachusetts, Pennsylvania, New Jersey, and several other States.

These early starters are speaking for the "cause" along the way and swelling their lists of signatures to the petition to Congress.

If it is really true that the good women (and especially the mothers) of our land are marching on to Washington, we shall certainly have national suffrage for women sooner or later. Just now the world (including China) is demonstrating that girls and women can do almost any thing that boys and men do. We have women on the police force in many of our large cities; women at the head of our schools in our great cities; women managing farms better than the general run of men manage—women everywhere. Why should not these women who own vast properties, and fill important positions, have a word to say in regard to law-making and law enforcement? With woman suffrage ends the thralldom of the liquor-traffic. No brewer or liquor-dealer will fill an important office when the women vote; and the brewers and the liquor-dealers will make the fight of their lives, before they permit women to have the right

of suffrage. Watch and see if I am not right.

THE LABOR TROUBLES OF THE PRESENT DAY.

We are receiving quite a few articles in regard to trades unions, socialism, etc. Some of them are so extreme, or at least look so to me, as to condemn every man who employs labor. May be I misunderstand, but that seems to be the drift of some of the extremists. Perhaps they mean that the man who employs labor should not make any profit. He should pay the man he hires enough so that employer and employee will be on an equal footing. I should like to see some of these people try to run a factory employing, say, a hundred men more or less. The employer who undertakes the responsibility of paying his help every Saturday night must have a margin. Sometimes he makes a profit; but at other times, in spite of all he can do, he loses money. He does not get for his goods what they cost him. Unavoidable losses and disasters occur. He must have some capital stored up to meet these emergencies. It is like having a storage battery to light our homes when the engine is not running, or when the wind does not blow. Young people who start out in the world must, as a rule, work for wages till they can get a start so as to own a farm or set up in business; and they get this start by working for some older person who has been able to save up a little and employ help, and pay that help promptly. I am glad to see laboring people forming a combine or union to protect themselves from greedy capitalists or greedy manufacturers, and they have a perfect right to fix their wages. Whenever they think their employer is making too much profit on labor it is certainly their privilege to refuse to work any longer at the price they have been getting, and this whole thing ought to be arranged pleasantly on both sides. When we can not agree, let us "agree to disagree." But when the man who has dropped his job because the pay is not sufficient presumes to interfere with somebody else who would like to take the work he has dropped, it is all wrong, as I see it. Is it not like the old fable of the dog in the manger? He can not eat the hay, or, if you choose, he *will* not eat it; but at the same time he plants himself there, and refuses to let the hungry horses and cattle have the hay they would be glad to get.

Quite a number of articles I have received reject the good old Bible, and make sarcastic remarks in regard to the Christian religion. Of course we can not give place to such articles in these pages.

SPECIAL SALE!

Root's Goods Below Our Cost

Beekeepers will change their minds and use different kinds of supers all of a sudden. Our trade used, before section-supers, shipping cases, etc., while now nearly every beekeeper in our locality produces bulk comb honey, which, consequently, leaves us with a big stock of section supers on hand, which we are willing to sell very cheap just to dispose of them. They are all in the original packages, just as we received them from the factory, and there is absolutely nothing the matter with them, only we have hardly any more sale for them in our locality.

70 2 I-8.....	.37 each	60 2 P-8.....	.37 each
25 4 I-8.....	.50 each	100 4 I-10.....	.55 each

HONEY-CANS

As in previous seasons, we have prepared a very large and complete stock of honey-cans in our warehouse, ready for immediate shipment to you. Our honey-cans this season are the product of the largest independent can-manufacturing company in the United States, and are warranted to be the best grade possible to procure. Every can and case is fully guaranteed to give absolute satisfaction. The boxes are of the very best material that can be obtained for packing honey-cans, being strong and substantial, and securely nailed with cement-coated nails.

Prices quoted on application. Full line of Root's Beekeepers' Supplies always on hand.

The A. I. Root Company
Medina, Ohio

ROOT'S BEEKEEPERS' SUPPLIES . . .

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequent letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1912.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in the line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

Bees by the Pound

**Safe arrival guaranteed to any point
within five days from Medina, Ohio.**

We have finally perfected our pound packages so that we are now able to ship bees without combs to almost any point in the United States and nearby points in Canada without danger of transmitting bee disease of any sort. Half a pound of bees is nearly the equivalent of a two-frame nucleus; one pound, to three frames; two pounds, to six frames; three pounds, to an ordinary colony such as may be sent by express. The express on these pound packages is only about a quarter of the express on the equivalent value of bees when they are sent on combs. We shall be ready to ship bees in pound lots from Medina, with 600 colonies to draw from, by the first of June, at the following prices, without queens: Half-pound package, \$2.00; pound package, \$3.00; two-pound package, \$5.00; three-pound package, \$6.00.

Through July, and on throughout the season, the prices without queens will rule as follows: Half-pound package, \$1.00; pound package, \$1.50; two-pound package, \$2.50; three-pound package, \$3.00.

If you want queens with the pound packages, add the price of the queen selected to the price of the bees.

Express on half a pound of bees with queen, within 300 miles of Medina, will be approximately: One pound, 38 cts.; two pounds, 45 cts.; three pounds, 57 cts.

NOTE.—We can not ship bees by parcel post other than a queen-bee and a dozen or so attendants.

We have so perfected our cages for shipping bees in pound lots that we now feel for the first time that we can guarantee safe arrival at the prices named above, where bees are not on the road more than five days. As a general thing they will go through in good condition, even when out more than six days; but for the present, at least, we do not feel like assuming a greater limit than five days. Our guarantee means that, if bees fail to go through alive, or if they go through in bad order, we will either replace the shipment or send enough more bees to make up for the loss at our own expense, or refund the money. Orders will be filled in rotation after the first of June. Send in your orders now, and thus insure early delivery.

In addition we guarantee to give full measure of bees by weight. Half a pound will contain from 2200 to 2500 bees, and larger packages in proportion.

PRICES OF QUEENS.

Untested.....	July to October, \$1.00.
Select untested.....	July to October, 1.25.
Tested.....	July to October, 2.00.
Select tested.....	July to October, 3.00.

Untested Home-bred Queens in Quantity Lots in August and September.—During August and September we are prepared to name very low prices on large quantities for requeening. Prices depend on supply available, and quoted on application.

Send all orders to the home office of The A. I. Root Co., Medina, Ohio. Orders from the extreme South will be filled from Florida and Texas; those in the extreme West, from California.

N. B.—To get the price of a package of bees and a queen, add the price of the queen selected to the price of the package.

"falcon" Queens.....

Three-band and Golden Italians, Caucasians, and Carniolans

Untested, July 1 to October 1 . . . One, \$.75; six, \$4.25; twelve, \$8.00
 Select untested, July 1 to October 1, " 1.00 " 5.50 " 10.00
 Tested, \$1.50 each. Select tested, \$2.00 each.

All queens are reared in strong vigorous colonies, and mated from populous nuclei. Instructions for introducing are to be found on the reverse side of the cage cover. A full line of bee supplies and foundation manufactured by us at Falconer, N. Y. Write for samples of our foundation and Red Catalog, postpaid.

SUPERIOR GOLDEN QUEENS FOR HONEY

Beauty, color, and gentleness, and non-swarming.
 Untested, \$1.00 each; six, \$5.00. Tested, \$2.00; select tested, \$3.00. Breeders from \$5.00 to \$20.00.
 See what this customer says:

MR. J. B. BROCKWELL:—I want to say something in behalf of the nice Golden Italian queens I received from you last year and this year. The ones that I ordered from you last year have done better than any bees that I have received from any one else; besides, they have produced nice golden bees, and the queens are the most prolific I have ever seen, and are superior to any other bees I have as honey-gatherers. The ones that I bought from you last year, none have attempted to swarm, and have made twice as much section honey as any other bees that I have in my apiary.

My bee friends are perfectly enthused over the appearance and the gentleness of these bees, as you see from the numerous orders which we are sending you.

July 25, 1913.

 High Hill, Montgomery Co., Mo.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled; combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

CHICAGO.—There is but little change in the honey market from our last report as regards price, with the exception of extracted, which is about 1 ct. per pound lower, and is also slow of sale. Receipts are in excess of the ordinary season in this market.

Chicago, August 2. R. A. BURNETT & Co.

INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cents in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cents, cash or trade.

Indianapolis, Aug. 2. WALTER S. POWDER.

ALBANY.—Our market is entirely bare of both comb and extracted honey, with a good demand for comb; but as yet we have not received any new arrivals. Look for a high market on comb honey this season. Our shippers report a very light crop of clover. Fancy clover brings 17 to 18; No. 1, 15 to 17.

Albany, Aug. 2. H. R. WRIGHT.

ZANESVILLE.—There is little change since my last report. The demand for honey seems to be a little better than usual, with no very material change in prices. Except small lots produced locally, but little of the new crop is arriving. For best grades of white comb, producers are offered 13 to 14; 15 for extra-fine lots and immediate shipment. Prices to the retail trade are largely arbitrary. Extracted is in rather light demand, and prices are unsettled. Thirty cents cash, 32 in trade, is being offered producers for beeswax.

Zanesville, Aug. 4. E. W. PEIRCE.

30 DISTRIBUTING HOUSES FOR LEWIS BEEWARE

Send for Annual Catalog which will tell you who is your nearest Distributor. G. B. Lewis Company, Watertown, Wis.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Honey reports continued from page 2.

BOSTON.—Fancy and No. 1 white comb, 16 to 17; fancy white, 11 to 12. Beeswax, 30.
Boston, Aug. 5. **BLAKE LEE CO.**

SCHENECTADY.—We have received no new honey yet except extracted in glass jars, and are unable to quote actual selling prices. We have had numerous calls for comb honey, and think producers make a mistake in not placing their early honey on the market as soon as possible, when there is a demand from summer resorts and tourists.

CHARLES MACCULLOCH.

Schenectady, N. Y., Aug. 5.

LIVERPOOL.—Our market is steady, but only finest qualities meet with any enquiry. About 100 cases of fine white Chilian sold at \$8.40 to \$9.60 for low to extra pile X, with retails of pile X in barrels at \$8.40, and pile 2 at \$6.96. A fair trade is done in Californian at \$10.20 to \$11.25 for light amber to white. Retail sales of fine Jamaica at \$9.12 have taken place. The beeswax market is dull, buyers being fully supplied with deliveries of forward contracts. We quote \$37.02 to \$41.28 for Chilian as to quality.

Liverpool, July 26.

TAYLOR & CO.

ST. LOUIS.—Southern honey in barrels and five-gallon cans continues to arrive, and the price is established at 6½ cents in barrels and 7 in cans for pure light-amber honey. There is no California or Western honey in this market, and quotations are nominal at 8 to 8½ for white and 8 for light amber in five-gallon cans. Comb honey is not in demand, and the receipts are a little heavier the last week or ten days. The quotations are nominal at 16 to 17 for fancy white comb honey; No. 2, 15; light amber, 13 to 14. By the case, fancy white comb honey brings \$3.65 to \$3.75; No. 2 white, \$3.25 to \$3.40; amber, \$2.75 to \$3.10, according to quality. Dark or broken honey is almost unsalable. Beeswax is in good demand at 32 cents for prime. Inferior and impure sells for less.

R. HARTMANN PRODUCE CO.

St. Louis, Mo., August 4.

WESTERN QUEENS!

Red-clover Strain of Italians

For fall introduction and late brood-rearing you can't do better than to introduce our stock. They work on red clover as readily as other flowers. Do you realize what this will mean for your next year's honey crop.

PRICES.—Untested, 1, 90c; 6, \$4.80; 12, \$9.00. Tested, 1, \$1.35; 6, \$6.50; 12, \$12.00. Queens shipped on one-frame nuclei, \$1.75 extra. Virgins, 40c. Safe arrival and satisfaction guaranteed.

Glen L. Evans, Greenleaf, Idaho

Breeder and Importer of Fine Queens

QUEENS--3-band Italians

75 cts. each, \$4.25 for 6, \$8.00 per doz.

If these queens fail to please your money will be returned.

RUSH ORDERS

BY MAIL.—Has your "forgettery" been working? And right this minute you need foundation or other items. See page 1 of our catalog, and it gives parcel-post rates on various articles.

BY EXPRESS.—Larger shipments than can go by mail we can rush out at once. Parcel-post and express orders receive our first attention.

BY FREIGHT.—Our rule is "ship same day the order is received," and we break it only when absolutely necessary. Notice that Lansing is the railroad center of Michigan from which freight shipments can be delivered quickest.

And we fill all orders with Root's goods. Just remember that too. Send for catalog. Beeswax wanted.

M. H. HUNT & SON, LANSING, MICH.

OPPOSITE LAKE SHORE DEPOT.

THREE-BAND ITALIAN QUEENS

Now is the time to requeen your bees from a select lot of queens now ready for prompt delivery. Untested, \$1.00; warranted, \$1.25; tested, \$2.00. Special price will be named on quantity lots.

Earl M. Nichols, Lyonsville, Mass.

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

When you are in urgent need of bee supplies you will likely consider two details—quality and promptness. For about a quarter of a century I have handled the Root quality of goods, shipping from Indianapolis at the factory schedule of prices. I believe it is generally admitted that as to material, workmanship, and accuracy, their equal is not to be had elsewhere. An immense stock on hand at all times, and no old or inferior goods offered at any price. Nearly every order is filled within a few hours after arrival, and you will agree with me that this feature is the finest advertising that I have ever been able to place on my house. We have so many railroads and express companies at our command that shipping promptly from here is not a hardship. The parcel post is a boon to all of us, and these packages are taken up by Uncle Sam three times a day.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and I should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

873 Massachusetts Avenue

"By Airship"

A customer writes, "You must have sent my last order by airship, it got here with such lightning speed."

Handicapped by a flood loss that necessitated an entirely new stock just at a time when the Root factory was crowded with orders, it has taxed my resources to the utmost to maintain my reputation for promptness in the delivery of supplies. The most active season for a number of years has made the task doubly difficult. Possibly a few customers may have been inconvenienced at the outset. I am glad to say, however, that my stock is now practically complete, and new goods are arriving right along. With the better facilities of my new location, and additional help for the remainder of the rush season, I feel that all customers, old and new, will be served here with as little delay and as great satisfaction as would be possible anywhere.

POWER HONEY-EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

QUALITY HILL QUEENS!

GOLDENS.—An opportunity to get Ben Davis' famous utility Goldens. Yard stocked from his apiaries. Breeder kept 16 frames filled until put in nucleus in June. Drone colonies headed by mothers of strain producing over 178 perfect $4\frac{1}{4}$ sections last flow. Especially immune to European foul brood.

THREE-BANDS.—A fine strain of prolific dark queens—drone mothers from a strain which produced over 172 perfect $4\frac{1}{4}$ sections last flow. An excellent honey-gathering grade; disease-resisting; the best of winterers.

All queens reared in full colonies during honey-flow; mated in four-frame nuclei, which gives large, vigorous, and prolific queens. Purity of mating, safe arrival, satisfaction, freedom from disease guaranteed.

Either Strain, Select Tested, \$2.50. Tested, \$1.50. Untested, 80 cents.

This is the best season of the year to requeen.

KENNETH HAWKINS,

Plainfield, Illinois

LOCKHART'S SILVER-GRAY CARNIOLANS

"LINE BRED" for the past 27 years. They are VERY hardy, gentle, prolific, great workers, and builders of VERY WHITE combs, and use mostly wax in place of propolis. Untested queen, \$1.00; six for \$5.00; dozen for \$9.00. Select untested queen, \$1.25; six for \$6.00; dozen for \$11.00. Tested queen, \$2.00; six for \$9.00; dozen for \$15.00. Select tested, \$3.00. Best breeder, \$5.00. Extra select, the very best we have, \$10.00. Safe arrival guaranteed in United States and Canada. No foul brood here.

F. A. LOCKHART & CO., Lake George, New York.

W. H. LAWS

is again ready to fill your orders for queens the present season. Law's Red-clover Italians are as good as can be had.

One firm who bought over 1100 queens from me in 1912 says, "Your queens are very satisfactory." We are booking orders now, and we are going to do our level best to mail all queens by return mail when so ordered. My bees are absolutely clean and free from all disease.

Queens sent out under the usual guarantees. Prices: Single queen, \$1; six for \$5. Breeding queens, none better, each, \$5.

W. H. LAWS, BEEVILLE, BEE COUNTY, TEXAS

Famous Italian Queens!

from the Apiaries of
WALLIN & CORLIS

have won a world-wide reputation for prolificness, hardiness, gentleness, and honey-gathering. Our queens are reared scientifically from breeders perfected by years of elimination. We have the famous Moore strain of Italians, and are giving every care to the perfection of cells and mating.

Satisfaction and safe arrival guaranteed. Circular free.

Untested, 75 cts.; dozen, \$8.00.

WALLIN & CORLIS
Brooksville, Ky.

Miller's Strain of Red-clover ITALIAN QUEENS

By Return Mail or order returned

Bred from superior breeders for business; gentle; no better hustlers; bees roll honey in; three-banded; Northern-bred; hardy and vigorous; winter well; not inclined to swarm; bred from best leather-colored strains. Untested, 75 cts.; six, \$4.00; dozen, \$7.50. Select untested, \$1.00; six, \$5.00; dozen, \$9.00. Satisfaction guaranteed.

Isaac F. Miller, a queen specialist and breeder for sixteen years, previously of Brookville, Rt. 2, Reynoldsville, and lately of Oil City, Rt. 2, Pa., is agent and breeder for E. L. Miller. Send all orders to
I. F. MILLER, Rt. 2, Brookville, Pa.

LINE-BRED CARNIOLAN Queens!

Carniolans are good winterers—prolific, gentle, enter supers readily, and excellent honey-gatherers. Untested, \$1.00; dozen, \$9.00. Tested, \$1.50.

CARNI-ITALIAN QUEENS

A cross between the Italian and Carniolan. Most excellent honey-gatherers, but not so gentle as Carniolans. While they last, 90 cts. each; dozen, \$8.00.

Bees by the pound through August. Ask for prices.

ALBERT C. HANN, PITTSBURY, NEW JERSEY
Carniolan Queen Breeder

QUEENS AND BEES

An improved superior strain of Italians is what **QUIRIN RAISES**. Our stock is Northern bred and hardy—all stock being wintered on summer stands.

We sent fifty nuclei to J. D. Nixon, of Lafarge, Wis., and July 20th (of same year) he wrote us saying they did just splendid, as at that date they had already filled their supers, and that he would have to extract them. We have files of similar testimonials.

Prices for rest of season	1	6	12
Select queens	\$.75	\$ 4.00	\$ 7.00
Tested queens	1.00	5.00	9.00
Select tested queens	1.50	8.00	15.00
Breeders	3.00	15.00	
Golden breeders	5.00		
Two-comb nuclei, no queen	2.25	12.00	32.00
Three-comb nuclei, no queen	3.25	18.00	32.00
Full colonies on 8 frames	5.00	25.00	
One pound bees, no queen	1.50	8.00	
Half pound bees, no queen	1.00	5.00	

Add price of queen wanted with bees. Bees by the pound, nuclei, and colonies; if wanted before June 1, add 25 per cent. **QUEENS NOW READY.** Safe delivery and pure mating guaranteed. Over 20 years a breeder. Testimonials and circular free.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, check-
ing the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE. By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 THE BEEKEEPER AND FRUIT-GROWER. A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 CATALOG OF BEEKEEPERS' SUPPLIES. Our complete catalog will be mailed free to any address on request.
- 7 SPRING MANAGEMENT OF BEES. A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oft-times perplexing matter. Price 10 cts.
- 8 HABITS OF THE HONEYBEE. By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 HOW TO KEEP BEES. A book of 228 pages detailing in a most interesting manner the experiences of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 THE A B C OF BEE CULTURE. A complete encyclopedia of bees, of 576 pages, fully illustrated, \$2.00 postpaid; half leather \$2.75.
- 11 GLEANINGS IN BEE CULTURE. A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 BACK-YARD BEEKEEPING. Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 THE BUCKEYE BEEHIVE, or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 ADVANCED BEE CULTURE. A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted, and adding your signature, and remittance, if required.

FRENCH'S POULTRY MUSTARD

Used and Recommended by
the Most Prominent Judges
and Breeders in the United
States.

The London *Feathered World* says,
"Poultry Mustard not only increases
the egg yield but improves fertility."

Send us your name and address and we will send you, free of charge, a copy of a pamphlet edited by Ralph Allen, of Herts, England, the conductor of the original English experiments with mustard. The book contains a full account of these experiments, together with testimonials from some of the most prominent American users of French's Poultry Mustard.

The time to begin the use of French's Poultry Mustard is at the very beginning of the moulting season. At this time its results are most valuable.

Comb honey in shallow frames; extracted, also bulk comb, packed any size to suit customer. Prices and samples sent free.

JOHN W. CASE, Bogart, Ga.

Thanking my many friends for their liberal patronage, I will extend the present prices of my famous Moore strain of three-banded Italian queens to Oct. 1, and then, on account of other business, I shall be obliged to stop for this season. Do not send me any orders for queens after that date. Prices: Untested, 75 cts.; 10 for \$6.50; tested, 90 cts.; 10 for \$7.50. Not less than 6 queens to one address.

H. D. MURRAY, Mathis, Tex.

Three-banded Italian queens and bees. Untested queens, 75 cts. each; six, \$4.25; twelve, \$8.00; tested, \$1.25 each; six, \$7.00; twelve, \$12.00. For select queens, add 25 cts. each to the above prices. Nuclei without queens, one-frame, \$1.50; two-frame, \$2.50; three-frame, \$3.00; 1 lb. bees, \$1.50; ½ lb. bees, \$1.00. Add price of queen wanted with bees.

ROBT B. SPICER, Wharton, N. J.

FOR SALE.—100 colonies of bees with full set of extracting-combs and supers for each, extractor, honey-tank, and lot of necessary equipment. Also lot of empty hives and supers. Big honey-flow on. Crop goes with the bees, and will nearly pay for them. Good opportunity for outyards in best territory in the State. This is a bargain at \$750. Will also sell good home and truck farm, on reasonable terms. A. J. Meek. Address GEO. H. REA, Reynoldsville, Pa.

Try my famous strain of bees and queens, and be convinced that they are all I claim for them. For honey-gathering they have few equals, being bred strictly for business from the best strains that could be had, both queens and drones, as it is as important to have drones of the best as it is queens. Queens, Italian three-band, or Golden five-band, and Carniolans, bred in separate yards. Untested, 1, \$1.00; 6, \$5.00; 12, \$9.00; 25, \$17.50; 50, \$34.00. Nuclei, with the untested queen, one-frame, \$2.50; 6 one-frame, \$15.00; two-frame, \$3.50; 6 two-frame, \$20.00. Nuclei with tested queen, one-frame, \$3.00; 6 one-frame, \$17.40; two-frame, \$4.00; 6 two-frame, \$23.40. Satisfaction and safe arrival and prompt service guaranteed.

D. E. BROTHERS, Attalla, Ala.

MISCELLANEOUS

White and brown ferrets. Stamp for description and prices. JEWELL'S FERRET KENNELS, Spencer, O.

Golden Seal.—Cuttings, plants, and seed-bearing roots for sale. Ask for prices.

J. A. HONABARGER, Warsaw, Ohio.

FOR SALE.—1912 crop ginseng seed. Ten thousand lots or more, 50 cts. per 1000.

S. PITTS, Stronghurst, Ill.

Have nice ripe tomatoes in November from your late green crop. Ripen without sunshine. Let me instruct you how. Address, with stamps, 520 Atwood St., Longmont, Colo.

POULTRY

Single-comb White Leghorns.—\$1.00 each; pullets and cockerels, yearlings and cocks; shipped anywhere. As many as desired. Write for catalog.

WOODWORTH FARM, Wilton, Conn.

BEEKEEPERS' DIRECTORY

If you need queens by return mail, send to J. W. K. SHAW & Co., Loreauville, Iberia Parish, La.

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Conn.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1913; beautiful, hustling gentle workers. Send for price list. E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

A. I. ROOT

"STARVING AMERICA."

Please see the advertisement in this issue of the above book, on the last cover page. Read over the table of contents. If this book were carefully read, and its teachings followed, it would make a revolution in doing away with a large per cent of the sickness, pain, and death that are afflicting the people of America just now. I take pleasure in giving the book this notice, not because of the small profit we make on it, but because I honestly believe the teachings of the book will prove to be a blessing to humanity. May God be praised that our government and our different States are looking into this matter of good and wholesome food, *undulterated*.

INSECT PESTS OF THE HOUSEHOLD.

I hold in my hand a very valuable bulletin of about 50 pages, headed as above. The first item is taken up with the common house-fly. Then we have a full up-to-date description of the different varieties of flies, mosquitoes, carpet-moths, cockroaches, bed-bugs, fleas, body lice, silver moth, typhoid flies, crickets, clover lice, grain beetles, fish-moth, etc. The best up-to-date remedies are given for all these pests. One of the first things mentioned is in regard to looking over your stuff often—not only house-cleaning "once a year," but overhauling every thing

in the house, say once a month or oftener. Second, tie up your things in paper bags where insects can not get in. Carefully screen your doors and windows, making your floors so tight with the modern floor varnishes or enamel that there is not a crack nor crevice where moth or other insects can get in, and using rugs instead of carpets. The old-fashioned carpet, tacked down clear up to the wall, and left so for a year, is almost sure to be a harbor for household pests.

This bulletin comes from our Ohio Experiment Station, Wooster. It is sent free to all residents of the State; but I can not tell whether it will be sent outside of Ohio or not.

THE OHIO WEED MANUAL OF ABOUT 100 PAGES.

This is a very valuable bulletin (also from our Ohio Experiment Station), describing the weeds of Ohio. It will prove valuable to beekeepers, for many of the so-called weeds are good honey-plants. There is only a brief mention of sweet clover; but the bulletin was put out in 1906, and sweet clover was not at that time as fully recognized as a blessing to humanity as it is at the present date. Very accurate and nice pictures are given of the greater part of the plants mentioned. These will enable the beekeeper or anybody else to recognize quickly any plant. Still more important, there are three pages of nice photos of the seed of pernicious weeds, also the seeds of all clovers. This is of especial value to the farmer who buys clover seed. With a magnifying-glass he can tell almost exactly what he may expect if he sows the seed that is offered for sale. In fact, he can get samples before buying; and this is specially important in purchasing alfalfa seed. Some of the very worst seeds known are brought on to the farm in clover seed that is purchased, unless great care is taken; and should the farm for any cause be neglected after such purchases, these foul seeds may crowd out the grass, clover, and every thing else. Such weeds are plainly visible in almost every locality in traveling over the country. A farmer dies, for instance, and perhaps nobody looks after the place for several years. If some of these pernicious weeds are once started it becomes a very difficult and expensive matter to get rid of them. In Northern Michigan quack grass and Canada thistle have in this way crowded out almost every thing else in neglected fields. The worst part of it is, they are often allowed to go to seed, and in this way do serious damage to good careful farmers whose fields adjoin. Of course, we have laws against permitting some plants (milkweed, etc.) to go to seed; but these laws are not always enforced.

Brief directions are given in regard to the best way to eradicate troublesome weeds; and a good up-to-date farmer rarely permits weeds of any kind to go to seed on his premises. But, unfortunately, his fields may adjoin those belonging to a slack or absent neighbor.

ROBBING SICK PEOPLE; SOMETHING ABOUT THOSE WHO PREY ON THE SICK.

It is a cowardly act to point a revolver at a strong man and demand his money; but just think how much more cowardly it is to go to some poor mortal who is near death with consumption, cancer, epileptic fits, and the like, and rob him of what few dollars he may have remaining, and give him nothing in return—perhaps *worse* than nothing. Our government has recently undertaken to punish quacks, and it has been demonstrated that millions of dollars have been given to these vultures who prey on sick humanity.

Three pamphlets from the American Medical Association, of Chicago, have just been put into my hands. The title of one of them is, "Professor Samuels, of Wichita, Kansas. A shrewd scoundrel who sells a solution of salt and sugar as a cure-all."

Another one is, "The United Doctors. Fake specialists who prey on the sick and defraud the public." The third one is entitled, "George H. Coutant and his fraudulent cure for deafness."

Let me give you a little illustration of the way these men work. A fake doctor was arrested; and among his effects were quite a number of "testimonials" different from those he published. Some were from poor people begging for their money back when they got no relief from his treatment; from other poor people after the patient had died before he had had a chance to take any medicine, or at least very little of it, asking for their money back. Did the good doctor return the money? Not much. In one case a poor woman scraped up money to send for medicine for her daughter. The daughter died before the medicine was received. Would he pay back the money to the poor woman, or any part of it? Not a copper. Like the Electropoise people they probably told her to sell it to some "ailing neighbor." Well, the above is bad enough, is it not? But listen.

It transpires that quite a few of these testimonials came from people who are dead. After a man is dead and gone it may be a difficult matter to prove he did not sign the testimonial. In one case a little girl, or perhaps a young woman, had been sorely afflicted with epileptic fits almost from her birth. A testimonial came out in the papers from her, telling what wonderful relief she had received. The fore part of the letter was a very truthful account of her sufferings; but when the testimonial was presented to her parents they said it was the first time they knew she had given any such testimonial—that, in fact, she had received no benefit at all from the treatment. When the girl herself was interviewed she acknowledged signing some paper in the doctor's office; but she was either too young or too stupid to think it necessary for her to read over the paper before signing her name.

The three pamphlets I have mentioned give full particulars of the way these rascals work to rob the sick.

A vivid illustration is now right before me of the way in which people get "notions" into their heads, or imagine they are helped. It is a pamphlet of 20 pages or more entitled "The Wonderful Story about Captain Rand." Well, this pamphlet is all about Captain Rand's lucky stone.* There are testimonials from perhaps a hundred

* See page 358 for 1912. At that time I submitted the pamphlets to the Postoffice Department at Washington; but Capt. Rand is still peddling his pebbles wherever he can find a victim.

people telling of the wonderful benefit they had received by having one of Captain Rand's lucky stones in their pocket. There are testimonials from all over the United States, including quite a few from Ohio, from men and women, who have had a wonderful "streak of good luck" by simply carrying a pebble in their pocket that was purchased of good Captain Rand for a dollar. The book goes on to say that Rockefeller, Paderewski, Madame Nordica, Li Hung Chang, and a great lot of other people have achieved success in life because they were "lucky," and not because of ability; and the inference would be that these shining lights of the present age had got hold of a lucky pebble which they carried around in their pockets; and you, my good friends, can be equally lucky, no matter how smart you are or how dull you are, if you will simply send a dollar for one of Captain W. I. Rand's lucky pebbles.

What ails our Postoffice Department that it can not rule this chap out of the mails for robbing—not sick people necessarily, but foolish and superstitious people who do not know any better.

By the way, there is a moral to this whole transaction. If people are cured, or imagine they are cured, which amounts to the same thing, by carrying a certain pebble in their pockets, is it not reasonable to suppose that thousands of others are cured by paying a big price for something in a bottle, even if it is only a solution of sugar and salt?

Yes, our people are waking up slowly. But it needs the American Medical Association and the United States Postoffice Department to give humanity now and then a good sound shaking that they may wake up a little faster, and cease giving their money to these highwaymen who are hunting up the sick and suffering and those near death. By the way, the latter class are perhaps their readiest victims because they are not alive to dispute the truthfulness of the testimonials that are printed and scattered throughout our land.

Why do not more periodicals take up the matter besides GLEANINGS and the *Rural New-Yorker*? Well, I am sorry to say it, but I presume one reason is these quack doctors have plenty of money, and they are always expected to pay spot cash for their swindling advertisements.

"ROBBING SICK PEOPLE."

If the following, which we clip from the *Chicago Advance*, is really true, and not a misprint, it would look as if my prayers were being answered, that our nation and

the whole wide world might soon be delivered from quackery and humbug nostrums:

Forty thousand eminent physicians and surgeons from every part of the United States and Canada met recently at Minneapolis in the sixty-fourth annual session of the American Medical Association. Special attention was given to the work of investigating and exposing frauds and nostrums.

If it is really true that the United States and Canada can furnish in one conference 40,000 physicians and surgeons, we may rejoice. Yes, and for one I shall rejoice if it transpires that there were only 4000 instead of 40,000; for 4000 would give the quacks and the nostrums a pretty big bump. Perhaps the world is bigger than I thought it was. In that case I willingly take off my cap and apologize to our medical brethren.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER.

SECOND-HAND 60-LB. EMPTY CANS.

If in need of good cans cheap, do not forget that we have a good stock of extra choice second-hand cans, two in a case, which we are selling at \$3.50 for 10 cases; \$7.50 for 25 cases; 100 or over at 25 cts. per case. If you do not find them free from rust on the inside we will replace any so found. They are excellent value for the money.

ONE-POUND ROUND JARS.

Since our last issue we have had word from the factory that makes our one-pound round jars, saying that, because of labor troubles, they are not able to furnish any more at present, and our stock is nearly gone. We have found at another factory another jar almost identical in shape, with a little larger opening, and which will hold a full pound of honey. They cost us some more, so the price will be 90 cts. per case, 6 cases for \$5.10. The price quoted in our last issue was 5 cts. a case lower than it should have been, and is hereby withdrawn. While they last, the price on the old pattern is 85 cts. a case, \$4.80 for 6 cases.

SHIPPING CASES SENT BY FIRST TRAIN AT BARGAIN PRICES.

Cases for 12 or 16 sections do not seem to be as popular as they once were. At any rate, we have a surplus stock of these sizes which we offer at bargain prices to close out. At the price we make, they are just as cheap to use as those holding 24 sections, besides being in smaller units for resale. Very often a family will buy a whole case of 12 sections when they will hesitate to buy a larger size. We offer for shipment from Medina

Twenty-three crates of 50 each, 11½-in. two-row cases for 12 sections, 4¼ x 1¾, with two or three inch glass, at \$4.50 per crate.

Eight crates of 50 each, 16-in two-row, and 32 crates of 15¼-in. two-row cases, for 16 4¼ x 1½ inch sections, with 2 and 3 inch glass. Price \$5.00 per crate.

Thirty-one crates of ten each for 16 4¼ x 1½ sections, at \$1.00 per crate.

Nine crates, 50 each, 9½-inch two-row cases, and 18 crates of 50 each 6¼-inch three-row cases with two and three inch glass for 12 4¼ x 1½ plain sections. Price \$4.50 per crate.

Eleven crates of ten each for 12 4¼ x 1½ plain sections, 3-in. glass. Price \$1.00 per crate.

Seven crates of 7½-inch four-row cases for 20 4 x 5 x 1¾ Danzenbaker sections, with 3-in. glass. Price \$6.50 per crate.

We also have a lot of similar cases at our branch offices, which we will close out at the same prices, and will fill your order from the point nearest you where they are available.

SPECIAL SALE!

Root's Goods Below Our Cost

Beekeepers will change their minds and use different kinds of supers all of a sudden. Our trade used, before section-supers, shipping cases, etc., while now nearly every beekeeper in our locality produces bulk comb honey, which, consequently, leaves us with a big stock of section supers on hand, which we are willing to sell very cheap just to dispose of them. They are all in the original packages, just as we received them from the factory, and there is absolutely nothing the matter with them, only we have hardly any more sale for them in our locality.

70 2 I-8.....	.37 each	60 2 P-8.....	.37 each
25 4 I-8.....	.50 each	100 4 I-10.....	.55 each

HONEY-CANS

As in previous seasons, we have prepared a very large and complete stock of honey-cans in our warehouse, ready for immediate shipment to you. Our honey-cans this season are the product of the largest independent can-manufacturing company in the United States, and are warranted to be the best grade possible to procure. Every can and case is fully guaranteed to give absolute satisfaction. The boxes are of the very best material that can be obtained for packing honey-cans, being strong and substantial, and securely nailed with cement-coated nails.

Prices quoted on application. Full line of Root's Beekeepers' Supplies always on hand.

The New Edition of Our A B C and X Y Z of Bee Culture

The new edition of the A B C and X Y Z of Bee Culture contains 750 pages, or 150 more than the former one. On account of rewriting so many of the old articles, and the incorporation of many new ones, making the book so much larger than formerly, we are now obliged to charge \$2.00 instead of \$1.50; but we believe that the reader will acknowledge that it is cheap, even at that price. Approximately it contains nearly 600,000 words. Any volume of this size on a technical subject like beekeeping would ordinarily command a price of \$5.00.

The new edition has been most thoroughly revised by E. R. Root, ably assisted by Dr. C. C. Miller, of Marengo, Ill., the veteran comb-honey producer; by Arthur C. Miller, of Providence, R. I., banker and bee-man; by John H. Lovell, of Waldoboro, Me., naturalist, botanist, and entomologist; and by Prof. Eugene G. Baldwin, the one who wrote that interesting series of articles on Florida beekeeping a year ago.

Up to now the old editions have been printed on standing type; but the extensive additions and revisions made it necessary to discard the old type which was becoming worn, and adopt a new scheme for getting out this work.

The fact that the new edition was to be entirely reset, from beginning to end, made it possible to make the revision much more thoroughly than had ever been undertaken before. In many cases, instead of patching new matter on to the old it seemed more practicable to rewrite the articles entire. A notable example of this will be found in the case of foul brood. The former edition contained six pages, while the new has sixteen.

A notable feature of this last edition is the bee botany, which was entirely overhauled, and in many cases entirely rewritten, by John H. Lovell and Prof. E. G. Baldwin, mentioned above. The subject of Pollen and the Pollination of Flowers was almost entirely rewritten by Mr. Lovell. We doubt if there is another man in the country who can handle these

subjects more ably than he. Dr. C. C. Miller to a great extent rewrote "Honeycomb." He also made important suggestions (which were adopted) on the subject of comb-honey production; and well he might, for he is now regarded as one of our best if not the best authority on the production of honey in sections. Mr. Arthur C. Miller, who for so many years made a close study of the internal economy of the hive, made numerous suggestions, many of which were adopted and incorporated in the text. In other cases, where he might or might not have differed with the author and reviser, his notes were put in the form of footnotes at the bottom of the page, and signed "A. C. M." In a similar way will be found an occasional footnote signed C. C. M. (Dr. Miller). The unsigned footnotes are by the author.

Some of the best things that A. I. Root ever wrote on bees (and he wrote a good many) still appear in this volume, and always will. It is not so much because his writings have been stricken out of this edition, but because the immense amount of new stuff made necessary by the growth of the industry has made A. I. R.'s material seem small in comparison. His familiar style will be recognized, for example, in Absconding Swarms; After-swarms; Anger of Bees; Artificial Heat; Artificial Pasturage; Bee-hunting; Bee-moth; Italian Bees; Queens; Robbing; Stings. What he has written under these heads will always remain as classic in bee culture. No man had more enthusiasm in the study of bees than A. I. Root, and that enthusiasm is so conspicuous that his writings can usually be picked out of the other matter, even though they have been skillfully interwoven with matter written by others.

Taking every thing into consideration, we feel proud of our new A B C and X Y Z of Bee Culture. It is new from cover to cover. It is the work of experts in their respective lines. It is the largest and most comprehensive bee-book in any language in the world; and yet it is sold at the popular price of only \$2.00.

Starving America

HOW FAR CAN A BEE SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think! The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . It teaches people to see the wonders and beauties of nature.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached on all sides and evenly capped, except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy and No. 1 white comb, 16 to 17; white extracted, 10 to 11. Beeswax, 30. Boston, Aug. 18. **BLAKE-LEE CO.**

INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cents in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cents, cash or trade.

Indianapolis, Aug. 16. **WALTER S. POUDER.**

KANSAS CITY.—With the long drouth broken, and cooler weather, the demand for honey, especially comb, is very much improved, and sales are equal to receipts. We quote No. 1 white comb, 24-section cases, \$3.50; No. 2 ditto, \$3.00 to \$3.25; No. 1 amber ditto, \$3.25; No. 2 dark and amber ditto, \$2.50 to \$3.00; white extracted, per lb., 8 to 8½. Beeswax brings 25 to 28.

C. C. CLEMONS PRODUCE CO.
Kansas City, Mo., Aug. 20.

ZANESVILLE.—Some honey is now arriving, but prices are arbitrary. Though there seems to be a good crop generally in the North Central States, the market remains firm, and there is little difficulty in securing prices approximating those of a year ago. We quote best grades of white comb at 18 to 19 wholesale; white extracted in 60-lb. cans, 9½ to 11, according to quantity. The local demand is a little better than ordinary—indeed, for the time being it is somewhat in excess of the supply. Producers are offered for beeswax 30 cts. cash, 32 in trade.

Zanesville, Aug. 16. **E. W. PEIRCE.**

30 DISTRIBUTING HOUSES FOR LEWIS BEEWARE

Send for Annual Catalog which will tell you who is your nearest Distributer. G. B. Lewis Company, Watertown, Wis.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Honey reports continued from page 2.

CINCINNATI.—We are receiving daily many shipments of honey, both comb and extracted. The market is quiet on both comb and extracted. No. 1 comb honey is selling from 14 to 16 cents, according to the quality and quantity purchased. White extracted honey is selling at 9 cents per pound in 60-lb. cans; larger lots, less. The above are our selling prices, not what we are paying. For nice yellow beeswax we will pay 30 cents delivered here.
Cincinnati, Aug. 19. C. H. W. WEBER.

DENVER.—New crop comb honey is coming in freely now, and quality is good. Owing to hot weather local demand is light. We are selling in a jobbing way at the following figures: No. 1 white, per case of 24 sections, \$3.15; choice, \$3.02 and No. 2, \$2.88. We quote white extracted at 9; light amber, 8; and amber strained at 6½ to 7½. We pay 26 cts. in cash and 28 in trade per lb. for clean, average yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION.
Denver, Aug. 21.

CHICAGO.—Arrivals of honey up to this date have exceeded those of the ordinary season, and at present the market is not active. This may be attributed in part to the hot weather, and the fact that the peach season has not yet culminated. Prices are nominal, with the best grades of white comb bringing from 17 to 18, and the off grades from 1 to 3 cts. less. The best grades of extracted bring from 8 to 9, according to kind and quality, with the ambers ranging from 6½ to 7½. Beeswax is steady at from 30 to 32, according to color and cleanliness.

Chicago, Aug. 18. R. A. BURNETT & Co.

NEW YORK.—There is a good demand for comb honey, especially the better grades. Receipts are light as yet, owing to the season not having opened, and we do not expect any larger arrivals until about the first week in September. We quote No. 1 and fancy white at 15 to 16; No. 2 white, 14; light amber and amber, 12 to 13. There is no buckwheat comb honey on the market as yet, and no prices are established. Extracted is in fair demand, with abundant supply of all grades excepting California sage. We quote white clover at 8 to 9; white alfalfa at 7½ to 8; light amber alfalfa, 7; southern in barrels, 70 to 85 cts. per gallon, according to quality. Beeswax is steady at 31 to 32.

New York, Aug. 18. HILDRETH & SEGELKEN.

CINCINNATI.—The market for comb honey is very good, owing to the lower level of prices, and we are our store. Extracted honey is of slower sale than selling fancy comb honey at 15 to 16 cts. per lb. at was expected; but this is due to the big crop, and the beekeepers selling so much locally, which bars us temporarily. Nevertheless, this is a good thing; for when their supply is sold they will have created a good demand for this article. We are selling white-clover extracted honey in 60-lb. cans at 8 to 10 cts. per lb., while for amber honey in barrels we are getting 5½ to 7½. The above prices are according to quality and quantity purchased. For strictly choice bright yellow beeswax we are paying 30 cts. delivered here.

Cincinnati, Aug. 18. THE FRED W. MUTH CO.

ST. LOUIS.—There is little change since our last report. Southern honey in barrels and cans, also comb honey, has been coming in to this market quite freely for the past few weeks. There is no change in prices, and extracted honey is still bringing 6½ cents in barrels and 7 cents in five-gallon cans. Comb honey is nominal at 16 to 17 for fancy white; No. 2, 15; light amber, 12 to 14. By the case, fancy white comb honey will bring from \$3.50 to \$3.65; No. 2, \$3.25 to \$3.40; amber, \$2.50 to \$3.00, according to quality. Dark or broken honey is almost unsalable. Owing to the extremely hot weather our comb-honey market has been dull, and we do not expect any improvement until cooler weather sets in. Beeswax is in good demand at 31½ cts. for prime. Inferior and impure sells for less.

J. L. FAJEN, . STOVER, MISSOURI

LIVERPOOL.—About 200 barrels of Chilean have been sold at \$7.92 to \$8.16 per cwt. for pile X; \$7.20 to \$7.32 for pile 1, and \$6.24 for pile 3. There is a fair demand, and plenty of stock to meet it. Moderate sales of California white set at \$10.20. Sellers now ask \$10.80, which has checked the demand for the moment. A small balance of fine Jamaican white sold at \$9.36, leaving the market bare of this description. We have a very dull beeswax market; but little enquiry, and no sales made. For Chilean, \$37.02 to \$41.28 is quoted.

Liverpool, Aug. 15. TAYLOR & CO.

Kind Words from our Customers

I received your home-bred Italian queen in good condition. I wish to congratulate you on the stock you produce. She was the best queen I ever saw, and I have seen a good many. I expect, if the season is good, to make a record with her.

Mechanicsville, N. Y., June 21. W. G. HURLEY.

Mr. A. I. Root.—At the regular monthly business meeting and social of the Brotherhood of Trowbridge Memorial M. E. Church, this city, held Monday, July 7, numerous articles from Our Homes and Temperance were read from GLEANINGS, and it was unanimously voted we communicate with you, showing our appreciation for devoting so much space in your magazine to the cause of Christianity, and wish you divine inspiration in the continuance of your good works.

RUSH ORDERS

BY MAIL.—Has your “forgettery” been working? And right this minute you need foundation or other items. See page 1 of our catalog, and it gives parcel-post rates on various articles.

BY EXPRESS.—Larger shipments than can go by mail we can rush out at once. Parcel-post and express orders receive our first attention.

BY FREIGHT.—Our rule is “ship same day the order is received,” and we break it only when absolutely necessary. Notice that Lansing is the railroad center of Michigan from which freight shipments can be delivered quickest.

And we fill all orders with Root's goods. Just remember that too. Send for catalog. Beeswax wanted.

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

A bounteous crop of finest quality honey has been secured, and, resulting from the needs of beekeepers in supplies, I have experienced the busiest season that I have ever known. The demand for the Root Goods has been excessive, and I have been very fortunate in keeping my stock complete and filling orders promptly. To do this my helpers and myself were required to apply ourselves from fifteen to eighteen hours per day. We were, of course, glad enough to do this, but I am going to offer some attractive discounts for supplies to be used next year if ordered early, and this will reduce the task of having so much to look after at the busy season. I believe the discounts will be a mutual benefit to all concerned. I am always glad to quote lowest estimates on any list of goods.

A feature on which I am now specializing is sending goods by parcel post. If you are within 150 miles of Indianapolis I can have your goods delivered to your home at a very moderate cost, if the package doesn't weigh over 20 pounds.

VEEDERSBURG, IND.

Walter S. Pouder, Indianapolis.

Dear Sir:—I wish to thank you for your prompt shipment of goods which I ordered a few days ago. They were brought to my house before I thought you had time to make up the order, and you well deserve your motto, "If goods are wanted quick, send to Pouder." I inclose another order and will be glad if you will send as quick.

Yours truly, JAMES A. LYNCH.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

873 Massachusetts Avenue

SOME EASONABLE UGGESTIONS.

Bee-escapes,
Honey-extractors,
Uncapping-knives,
Shipping-cases,
Glass Jars,
Honey Labels,
Veils, Smokers,

Bee-brushes,
Wax-presses,
Hive-tools,
Tin Cans,
Cartons,
Bee Books,
Gloves.

You are doubtless in need of and ready to order one or more of these items. You want ROOT QUALITY and PEIRCE SERVICE of course. Why not include with this order the hives, supers, sections, foundation, etc., you will need for next season? Prices are lower now than they will be in the spring. Then it will be a great satisfaction to have every thing ready for immediate use when needed, and so be immune from the vexation and loss that may result from unavoidable delays during the rush season.

The flooded stock is pretty nearly closed out. A few odds and ends remain. If you can use any slightly damaged goods at very low prices, write for list.

Look the catalog over and make-up your order now. Do not hesitate to order even any small article needed, as the lower parcel-post rates now in effect insure delivery at trifling expense.

POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

How to Keep Bees

By
Anna Botsford Comstock

This is an excellent book for the beginner. Nothing better. We cordially recommend it to all who are learning beekeeping by their own effort. Having commenced beekeeping three times, the talented author is in a position to furnish the right kind of advice. You can not go wrong in ordering this book. It is charmingly written and easily understood.

Medina, Ohio

BEESWAX WANTED!

Recent demand for comb foundation has been good, and our stock of beeswax is running low. We offer for good average quality and prompt shipment 30 cts. per lb. cash, or 32 in trade, delivered at Medina. Shipments from the Pacific coast should be in barrels or boxes. From other Western points, pack in double bags to get the most favorable rate. Be sure to mark the shipment so it can be identified when it arrives, and send us a shipping receipt with a statement of gross, tare, and net weight shipped. This is important as it gives us something to check so as to determine whether any has been lost in transit.

HONEY COMB AND EXTRACTED

We buy and sell, carlots or less. Honey producers of the Pacific States get in touch with us. . .

LEUTZINGER & LANE

420 to 424 Front Street, San Francisco, Cal.

**SUPERIOR GOLDEN QUEENS
FOR HONEY**

Beauty, color, and gentleness, and non-swarming.
Untested, \$1.00 each; six, \$5.00. Tested, \$2.00; select
tested, \$3.00. Breeders from \$5.00 to \$20.00.
See what this customer says:

Mr. J. B. BROCKWELL.—I want to say something in behalf of the nice Golden Italian queens I received from you last year and this year. The ones that I ordered from you last year have done better than any bees that I have received from any one else; besides, they have produced nice golden bees, and the queens are the most prolific I have ever seen, and are superior to any other bees I have as honey-gatherers. The ones that I bought from you last year, none have attempted to swarm, and have made twice as much section honey as any other bees that I have in my apiary.

My bee friends are perfectly enthused over the appearance and the gentleness of these bees, as you see from the numerous orders which we are sending you.

July 25, 1913. J. W. BLACK.
J. B. BROCKWELL, MALVERN HILL, VA.

**Miller's Strain of Red-clover ITALIAN QUEENS
By Return Mail or order returned**

Bred from superior breeders for business; gentle; no better hustlers; bees roll honey in; three-banded; **Northern-bred**; hardy and vigorous; winter well; not inclined to swarm; bred from best leather-colored strains. Untested, 75 cts.; six, \$4.00; dozen, \$7.50. Select untested, \$1.00; six, \$5.00; dozen, \$9.00. Satisfaction guaranteed.

Isaac F. Miller, a queen specialist and breeder for sixteen years, previously of Brookville, Rt. 2, Reynoldsville, and lately of Oil City, Rt. 2, Pa., is agent and breeder for E. L. Miller. Send all orders to
I. F. MILLER, Rt. 2, Brookville, Pa.

QUEENS--3-band Italians

75 cts. each, \$4.25 for 6, \$8.00 per doz.
If these queens fail to please your money will be returned.

L. H. ROBEY
WORTHINGTON, WEST VIRGINIA

BEEKEEPERS, ATTENTION!

If you have any extracted or comb honey to offer, send us samples of quality; state quantities, and how packed. We pay the highest market price for the same. We are paying 31c cash for nice, bright, clean beeswax.

CHAS. ISRAEL & BROS., NEW YORK
486 Canal Street

ITALIAN QUEENS--NORTHERN BRED

Superior winterers; descriptive list free. Bees by the pound. Untested, 75 cts.; select tested, \$1.50. Plans "How to Introduce Queens," 15c; "How to Increase," 15c; both for 25c.
E. E. MOTT, Glenwood, Mich.

**QUEENS
AND BEES**

An improved superior strain of Italians is what **QUIRIN** RAISES. Our stock is Northern bred and hardy—all stock being wintered on summer stands.

We sent fifty nuclei to J. D. Nixon, of Lafarge, Wis., and July 20th (of same year) he wrote us saying they did just splendid, as at that date they had already filled their supers, and that he would have to extract them. We have files of similar testimonials.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, checking the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE. By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 THE BEEKEEPER AND FRUIT-GROWER. A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 CATALOG OF BEEKEEPERS' SUPPLIES. Our complete catalog will be mailed free to any address on request.
- 7 SPRING MANAGEMENT OF BEES. A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oftentimes perplexing matter. Price 10 cts.
- 8 HABITS OF THE HONEYBEE. By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 HOW TO KEEP BEES. A book of 228 pages detailing in a most interesting manner the experiences of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 THE A B C OF BEE CULTURE. A complete encyclopedia of bees, of 712 pages, fully illustrated, \$2.00 postpaid; half leather \$2.75.
- 11 GLEANINGS IN BEE CULTURE. A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 BACK-YARD BEEKEEPING. Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 THE BUCKEYE BEEHIVE, or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 ADVANCED BEE CULTURE. A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted, and adding your signature, and remittance, if required.

FRENCH'S POULTRY MUSTARD

Used and Recommended by
the Most Prominent Judges
and Breeders in the United
States.

The London *Feathered World* says,
"Poultry Mustard not only increases
the egg yield but improves fertility."

Send us your name and address and we will send you, free of charge, a copy of a pamphlet edited by Ralph Allen, of Herts, England, the conductor of the original English experiments with mustard. The book contains a full account of these experiments, together with testimonials from some of the most prominent American users of French's Poultry Mustard.

The time to begin the use of French's Poultry Mustard is at the very beginning of the moulting season. At this time its results are most valuable.

H. C. SHORT, Winchester, Ohio.

FOR SALE.—Guaranteed purely mated three-banded Italian queens. I recommend four points—gentle, prolific, extra good honey-makers, good winterers. J. E. Hand strain. State inspector's certificate. Queens by return mail or your money back. Select untested, one, 80 cts.; 6, \$4; 12, \$7; 25, \$13.
J. M. GINGERICH, Rt. 3, Arthur, Ill.

Queens from Georgia apiaries. Hybrids, 25 cts. each. Red-clover Italians, untested, 70 cts. each; dozen, \$7.50; tested, \$1.00 each; dozen, \$10.00. Safe delivery and satisfaction guaranteed. Comb honey in shallow frames; extracted, also bulk comb packed any size to suit customer. Prices and samples sent free.
JOHN W. CASH, Bogart, Ga.

Three-banded Italian queens and bees. Untested queens, 75 cts. each; six, \$4.25; twelve, \$8.00; tested, \$1.25 each; six, \$7.00; twelve, \$12.00. For select queens, add 25 cts. each to the above prices. Nuclei without queens, one-frame, \$1.50; two-frame, \$2.50; three-frame, \$3.00; 1 lb. bees, \$1.50; ½ lb. bees, \$1.00. Add price of queen wanted with bees.
ROBT B. SPICER, Wharton, N. J.

Thanking my many friends for their liberal patronage, I will extend the present prices of my famous Moore strain of three-banded Italian queens to Oct. 1, and then, on account of other business, I shall be obliged to stop for this season. Do not send me any orders for queens after that date. Prices: Untested, 75 cts.; 10 for \$6.50; tested, 90 cts.; 10 for \$7.50. Not less than 6 queens to one address.
H. D. MURRAY, Mathis, Texas.

MISCELLANEOUS

White and brown ferrets. Stamp for description and prices. JEWELL'S FERRET KENNELS, Spencer, O.

Golden Seal.—Cuttings, plants, and seed-bearing roots for sale. Ask for prices
J. A. HONABARGER, Warsaw, Ohio.

FOR SALE.—1912 crop ginseng seed. Ten thousand lots or more, 50 cts. per 1000.
S. PITTS, Stronghurst, Ill.

FOR SALE.—Collie pups (Reg. A.K.C.), by Ch. Ravenwood's Reward, with very best blood lines. Send 4 cts. in stamps for pedigree and price.
R. C. R., Box 95, Clyde, Ohio.

Single-comb White Leghorns.—\$1.00 each; pullets and cockerels, yearlings and cocks; shipped anywhere. As many as desired. Write for catalog.
WOODWORTH FARM, Wilton, Conn.

Have nice ripe tomatoes in November from your late green crop. Ripen without sunshine. Let me instruct you how. Address, with stamps, 520 Atwood St., Longmont, Colo.

HELP WANTED

WANTED.—Experienced man in apiaries for rest of season.
F. B. CAVANAGH, Hebron, Ind.

WANTED.—Man to take charge of a small apiary on shares.
U. A. VINCENT, Mars Bluff, S. C.

BEEKEEPERS' DIRECTORY

If you need queens by return mail, send to
J. W. K. SHAW & Co., Loreauville, Iberia Parish, La.

Nutmeg Italian queens, leather color, after June 1, \$1.00.
A. W. YATES, Hartford, Conn.

Well-bred bees and queens. Hives and supplies.
J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1913; beautiful, hustling, gentle workers. Send for price list.
E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business: June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.
H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.
QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

A. I. ROOT

THE WOMEN OF PARIS, ETC.

The following letter, just at hand, explains itself:

Our attention has been called to a letter printed by you in your August 1st number, on page 556, under the heading, "The Women of France, a Plea in their Behalf," in which appears the following sentence: "Cook's Agency pours by the carload its tourists into the small and dirty theatres of Montmartre." This reference to our business is false, and, no doubt, libelous, and is calculated to do us considerable injury. We feel that it was inadvertently published by you, as you would hardly allow any one to attack a firm of our reputation and standing, and we must ask you to publish a retraction and apology in your next issue.

THOS. COOK & SON,
per George S. Harrison, Mgr.

New York, Aug. 23.

Permit me to add that I printed the letter sent us, just as it came, without any thought of endorsing it, and I humbly beg pardon of Cook's Agency or of anybody else who has been misrepresented by said letter.

ONE OF OUR FLORIDA NEIGHBORS TELLS OF
HIS SUMMER TRIP IN THE NORTH.

The letter below was evidently not intended for print; but as it gives glimpses of several things that will be of interest to our readers I have decided to give it entire.

Dear Friends:—We have now been home a few days, and I am trying to gather up the broken threads again after nine weeks' absence. We had a splendid trip, every minute of it with pleasure and profit intermingled; but the one day with you stands out as perhaps the most enjoyable one of the whole vacation. To say that we will not soon forget the very great kindness of all Rootville is putting it very mildly. Indeed, we were embarrassed with the cordiality of your greeting; and for it to come from people who a short time ago were strangers to us makes it all the more appreciated.

Every thing that you showed us was interesting—so interesting that I have regretted many times that we could not have remained a day or two more with you. With all of your wonderful things to show, and your kindness to visitors, I can easily see how Medina is the Mecca of beekeepers the world over. While your plant is interesting to me in every detail, and shows thought and skill of a very high order, still the Root family itself, with all of its ramifications, its kindly feeling and love and harmony, is to me the most interesting thing. I wonder if there is another institution on earth run in the same way; and if it could be if its founder had not planted it and developed it in faith and love. It will be to me an inspiration to better things for many days.

We found a good deal of hot weather in July. Chicago, which is generally pretty cool, was sizzling hot when we were there. So was it out in Illinois at my old home, and in Southern Indiana where we visited. In fact, it was so hot in several places that we were greatly relieved to get to Florida, as it has been very cool and pleasant here ever since we arrived home.

Michigan and Northern Illinois had good rains, and the crops were excellent; but south of Indianapolis to Chattanooga it was very dry and the crops poor. I suppose that this will affect the supply of honey; but it ought to be correspondingly large further north, for the white and sweet clover were luxuriant everywhere. The Florida honey crop is rather light.

Mr. Root's dasheen is doing finely, and is from two to four feet high. Mr. Harrison's is higher, and Mr. Ault's is, some of it, over six feet. I shall be very much interested in seeing what tubers are developed, and what we think of them. The stuff can surely be grown here very easily, and at a time of the year when our land would otherwise be idle. I expect to

begin planting strawberries to-day. My celery-beds are fine, and prospects are good.
 Bradentown, Fla., Aug. 6. E. B. ROOD.

DASHEENS, SOIL FOR, ETC.

The letter below, from friend Reasoner, of the Royal Palm Nurseries, gives us some good suggestions in regard to using suitable land for dasheens. Mr. Reasoner is authority on growing almost any plant found on the face of the earth.

Dear Mr. Root:—Yesterday after dinner at Mr. Root's he and I walked over to see your dasheens. They are looking well, but not so well as Mr. Ault's are. His are 6 feet high, and immense. They are on just such wet rich soil as they like. Yours lack manure on the upper or drier ground, and apparently a little cultivation. These plants grow best on peaty (mucky) soil. You have a bauhinia north of the house with a number of seed-pods hanging on, yet quite green. I should like to secure these pods when ripe. We are having delightful showers every day. That has continued for about three weeks now, being a late rainy season. It may continue until past our usual time, possibly into November.
 Oneco, Fla., Aug. 18. E. N. REASONER.

GARDENING FOR "PROFIT."

On page 578, Aug. 15, I gave you a picture of the dasheens, and I told you something about how I prepared the ground for high-pressure gardening. Well, just now, Aug. 20, they are pretty nearly as high as my head, and they cover the ground with their great wide leaves. The sweet corn I spoke of then is now, some of it, 12 feet high, and the ears are the largest and finest I ever saw. On most of the stalks there are two large ears. By the way, each of our five children has a garden—at least they *try* to have a garden, and pay out money enough, as a rule, to hired help to have nice good gardens. Now, in our several departments we have some excellent men for making gardens or almost any thing else. But in the spring time, when it is time to start gardening, these expert men are busy. Taking one out of his accustomed place in the factory or in the lumber-yard might result in interrupting business, and, may be, delaying an important order; so the good folks at Rootville do what they can themselves, with the assistance of a tramp who occasionally comes along. Quite a little of our gardening is done by the women-folks; but the average hired girl, at least in our neighborhood, does not take kindly to gardening during these latter days. Well, occasionally "grandpa" looks through their gardens and gives advice. I usually tell them when there is danger of a freeze, or when they need not worry about frost. Some of these younger folks, no doubt, think they know as much about gardening as grandpa does.

Well, this summer when I was planning to grow dasheens and other stuff, I thought I would give the younger ones an object-

lesson just for the fun of it. I have told you how I had my quarter-acre thoroughly underdrained, plenty of manure plowed under, and cultivated at just the right time, etc. I did all the hoeing myself.

There are three ways in which I get inspiration for writing these Home papers: First, plenty of sleep; second, good nourishing food without any "frill." What I mean by "frill" is cake, pie, and ice-cream after I have had a good square meal already. The third way I get inspiration is to get hold of that light hoe that is bright and clean and go out and hoe in said garden until the perspiration drops from my nose. And I believe this last method of getting inspiration is the best one of all, but they will go pretty well together. Now, then, not only are the dasheens doing wonders, but the sweet corn just back of them is astonishing. Of course, Mrs. Root and I can not use more than a few ears a day, even if we live on green corn, so I am enjoying the fun of carrying samples around to the neighbors. Years ago my friend Peter Henderson put out a book called "Gardening for Profit." That book has helped the world. The "profit" the author had in mind was the dollars and cents you get for your crop. But the "profit" I have in mind just now is the pleasant feeling that always comes from dividing with your neighbors. Jesus once said, "It is more blessed to give than to receive;" and I want to suggest to a lot of old men—especially those who no longer need to toil for their daily bread—that these elderly people, especially if they are grandpas, devote their time and remaining strength toward growing stuff to *give away*. If you have not tried it, you can not imagine how a little gift like a dozen ears of corn, a little bit before anybody else has any, will bring about kind and neighborly feelings in almost any neighborhood. Suppose you have a neighbor (and I do hope it is only a *suppose*) who is always looking out for the best end of a bargain. If you know he has not a very good garden, and you can surprise him by something real nice, such as I have mentioned, you can not think, unless you have tried it, how much it will do toward softening his hard and suspicious disposition. Of course, our corn, string beans, peas, and early tomatoes, are given mostly to the children and grandchildren; but even there it tends to keep pleasant feelings all around. You need not go to the newspapers to be reminded that there are sometimes quarrels and jangles among the different members of a family. I once heard of a father who would tell his own children that he did not want them in the future to

set foot on his premises. I suppose that when such things occur Satan gets into the heart of both parents and children; but, oh how we ought to work and pray, and bear and forbear, rather than that our dying hours may be disturbed by any such memory of family differences! Now, then, making a nice garden, and getting things a little ahead of anybody else, so that you may sell your stuff for a good big price, is "laying up treasures on earth;" but having a beautiful garden, and carrying it forward in such a way that you may in your declining years enjoy the privilege of giving away what God has given you in the way of extra-nice fruits and vegetables, is "laying up treasures in heaven where moth and rust doth not corrupt, and where thieves do not break through nor steal."

In speaking of underdraining, heavy manuring, and careful and thorough cultivation, I failed to mention one other factor. Just now we have an abundance of water from the city waterworks that costs only 25 cents per 1000 gallons. Just lately; while we have been having a severe drouth, I have been letting water run down the furrows between the dasheen plants; and in order to get it there, I had to run between the corn and potatoes; and once when I forgot to turn it off it went down through my tomatoes, cantaloupes, and Hubbard squashes; and it was a magnificent object-lesson for me to see the stuff that had just begun to suffer from our severe drouth (right now in the middle of August) just start up and jump. Of course I used my hoe when the ground had dried off sufficiently; and I was surprised to find that the water had got over, by capillary attraction, five to ten feet on each side of the furrow where I soaked up the ground for two or three hours. We have the finest lot of cantaloupes I ever grew, in spite of the drouth, and the biggest Hubbard squashes (and a good lot of them also), from just a few hills we planted. The whole product of this quarter-acre we are planning to give away to our neighbors right and left.

THE SOLOMON ISLANDS GOURD, OR GUADO BEANS, AGAIN—SEE PAGE 17, JULY 15.

This gourd, or bean, has now climbed a trellis six or seven feet high, and it has gone a yard above the trellis, and lopped over. In fact, just after one summer shower it grew 8 inches in 24 hours. It has started quite a number of the so-called gourd beans. One of these is just in bloom this morning, Aug. 25. It is a queer-looking plant, any way. There is a cluster of blossoms, and then on a separate stem is the fruit. The fruit blossom sends out filaments much like corn silk on a small scale. Our good friend Henry Borchers, of Laredo, Texas, will probably have some edible fruit before ours, for his seed was gotten in earlier than ours, and he is so much further south. If the frost will now be so accommodating this season as to hold off till about November 1, I hope to have edible dasheens and guado beans raised here in Ohio, and we will give you a picture of the latter at a later date if possible.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER.

PRICES FOR THE COMING YEAR AND EARLY-ORDER DISCOUNTS.

It is five years since there has been any material change in prices of hives and frames and other articles made from lumber. The upward movement of prices of most commodities has continued, largely because gold, the standard of values, has become cheaper through increased production. We are paying more for lumber and labor, and are compelled to make an advance in prices. We are working on a revised list which will be issued soon. Until this is out we will fill such orders as come in at present list without any early-order discount.

The new prices on hives, frames, etc., will be about 10 per cent higher. Sections are advanced 25 cts. per thousand; comb foundation, 3 cts. per pound.

The early-order discount, which will apply to the new list, not to the old, will be the same as formerly—7 per cent for cash orders in September, with one per cent less each month as the season advances. The usual exceptions are made in the application of the discount to certain goods. Full particulars on application.

Convention Notices

Oklahoma beekeepers came very near securing one of the best bee laws of any State in the Union at the last session of the legislature. If you want to know why we failed, come to the meeting at the apiary building, State Fairgrounds, Thursday evening, Oct. 2, 1913. We want to discuss such other topics as will be of general interest to Oklahoma beekeepers, and I shall appreciate it if every beekeeper in Oklahoma will drop me a card naming some subject that he would like discussed at that meeting.

N. FRED GARDINER.

Pres. Oklahoma Beekeepers' Association.

The annual convention of the Ontario Beekeepers' Association will be held on Nov. 18, 19, 20, 21. The following is the program, beginning

TUESDAY EVENING, NOV. 18:

7:30. Meeting of officers and directors.

WEDNESDAY MORNING, NOV. 19.

9:30. Minutes, Morley Pettit, Guelph, Secretary. President's Address, Denis Nolan, Newton Robinson.

First Vice-president's Reply, J. L. Byer, Mt. Joy.

Second Vice-president's Reply, Miss Ethel Robson, Elderton.

Co-operative work in the Counties. Alex. Dickson, Lancaster, Sec. Glengarry Association.

Blake Miller, Aylmer, Sec. Elgin Ass'n.

R. C. Fretz, Forest, Sec. Lambton Ass'n.

All other county secretaries are expected to join in discussion.

WEDNESDAY AFTERNOON.

2:00. The Office of Director, What does it Mean?

R. E. L. Harkness, Irena.

The Swarming Problem,

H. G. Sibbald, Claude, Ont.

Question-box, D. Donaldson, Carleton Place.

THURSDAY MORNING, NOV. 20.

9:30. Queen-rearing, John A. McKinnon, St. Eugene. The Association Organ, H. B. Cowan, Editor The Beekeeper, Peterboro.

Question-box, Jas. Armstrong, Cheapside.

THURSDAY AFTERNOON.

2:00. Address, E. R. Root, Medina, Ohio. Address, Dr. G. C. Creelman, L.L.D., President O. A. College, Guelph.

Election of Officers.

Reports.—Secretary, Treasurer, Directors, Committees, Representative to Exhibitions, Judges of Honey.

FRIDAY MORNING, NOV. 21.

9:30. The Question of Transportation.

Geo. F. Kingsmill, O. A. C., Guelph.

Notes from the Year's Work.

Morley Pettit, Provincial Apiarist.

Question-box, Chas. Blake, Snow Road.

FRIDAY AFTERNOON.

2:00. Comb-honey Production, D. Angus, Lambeth.

Extracted-honey Production,

John A. Lunn, Fingal.

Unfinished business.

BOOKS FOR BEEKEEPERS AND OTHERS

Any of these books on which postage is not given will be forwarded by mail postpaid, on receipt of price.

As many of the bee-books are sent with other goods by freight or express, incurring no postage, we give prices separately. You will notice that you can judge of the size of the books very well by the amount required for postage on each.

Postage [Price without Postage]

PRACTICAL WORKS ON BEE CULTURE.

5	The Honeybee, by Thos. William Cowan.....	95
10	How to Keep Bees.....	90
15	Modern Bee-farm. By S. Simmins, cloth bound.....	1 85
	Wax Craft, Cowan.....	1 00

POPULAR BOOKS ON BEE CULTURE.

11	The Bee People, Margaret W. Morley.....	1 40
11	The Honey-makers, Margaret W. Morley.....	1 40
11	Life of the Bee, Maeterlinck.....	1 30
11	The Swarm, Maeterlinck.....	1 30
7	The Bee-master of Warriolow, Edwards.....	50
10	Lore of the Honeybee.....	1 90
	Alexander's Writings on Practical Bee Culture. By the late E. W. Alexander, who conducted the largest apiary in the United States. A wonderfully interesting discussion of beekeeping in its broadest phases. Any one can understand it; 35 chapters, 95 pages. Paper bound, 50 cts. postpaid. 1	
	A Year's Work in an Out-apiary.....	
	By G. M. Doolittle. Packed full of most valuable information ever given to beekeepers. A practical and interesting book by a very successful apiarist. Sale has reached nearly 50,000 copies; 60 pages, paper bound, 50 cts. postpaid.	
	Beekeeping by Twentieth-century Methods, by J. E. Hand.....	50

The author shows not only how to control swarming, but how to treat foul brood without shaking, and discusses in a comprehensive way many other down-to-date apicultural problems and their solutions.

MISCELLANEOUS HAND-BOOKS.

5	A B C of Carp Culture, by Geo. Finley... 25
7	A B C of Potato Culture, Terry. New edition, revised and enlarged; paper, 50c; cloth, 75c; mail, 85c.

This is T. B. Terry's first and most masterly work. It has really made a revolution in potato-growing, and has been reprinted in several foreign languages. By getting the ground in proper condition to grow great crops of clover, and turning this under, Terry succeeded, not only in getting more potatoes, but even better ones, and in producing them at less expense also, than by any plan or system before the time he began his experiments in 1885. The book has already passed through three editions of many thousands. It not only includes potato-growing in the United States, but in Bermuda, the Island of Jersey, and other warmer parts of the world where "new potatoes" are raised for the express purpose of getting the high prices in the cities during January, February, and March. The book also gives special attention to the different and best methods for preserving and keeping seed potatoes in the very best condition to plant in all these different localities.

Postage

Price without Postage

5	A B C of Strawberry Culture, by T. B. Terry. New edition, revised and enlarged; paper, 45c; cloth, 68c; by mail, 75c.
---	---

After Terry's potato-book had obtained such a kind reception from farmers, market-gardeners, and others, he was induced to give his plan of growing strawberries, as he did potatoes, by plowing under great crops of clover, and, like the potato-book, his writings gave a new impetus to strawberry-growing; in fact, some of his pupils declare that, aside from the picking, they can grow strawberries almost as cheaply per bushel as potatoes. By following Terry's teachings, thousands of people have not only been able to give their families but the whole wide world better strawberries, and more of them, than they ever saw before.

6	Asparagus Culture.....	40
6	Alfalfa Culture.....	40
	Barn Plans and Out-buildings.....	90
2	Celery for Profit, by T. Greiner.....	25
	The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book.	

10 Fruit Harvesting, Storing, Marketing, etc. 75 It has been well said that it is an easier matter to grow stuff than to sell it at a proper price after it is grown; and many men fail, not because they are inexperienced in getting a crop, but because they do not know how to sell their crops to the best advantage. This is the first book of the kind we have had as an aid in selling. It not only tells all about picking, sorting, and packing, but gives all the best methods for storing for one or two days or a longer time. It also tells about evaporating and canning when there is a glut in the market. It discusses fruit packages and commission dealers, and even takes in cold storage. It is a new book of 250 pages, full of illustrations. Publisher's price, \$1.00.

| Farming with Green Manures, postpaid. 90 This book was written several years ago; but since competent labor has got to be so expensive and hard to get many farmers are beginning to find they can turn under various green crops much cheaper than to buy stable manure and haul and spread it—cheaper, in fact, than they can buy fertilizers. This book mentions almost all plants used for plowing under, and gives the value compared with stable manure. Some of the claims seem extravagant, but we are at present getting goods crops and keeping up the fertility by a similar treatment, on our ten-acre farm.

7	Farm, Gardening and Seed-growing.....	90
10	Fuller's Grape Culturist.....	1 15
5	Garden and Farm Topics, Henderson.....	60
12	Gardening for Pleasure, Henderson.....	1 10

While "Gardening for Profit" is written with a view of making gardening pay, it touches a good deal on the pleasure part, and "Gardening for Pleasure" takes up this matter of beautifying your homes and improving your grounds, without the special point in view of making money out of it. I think most of you will need this if you get "Gardening for Profit." This work has 246 pages and 134 illustrations. (Retail price \$2.00.)

12 Gardening for Profit..... 1 10 This is a late revision of Peter Henderson's celebrated work. Nothing that has ever before been put in print has done so much toward marking market-gardening a science and a fascinating industry. Peter Henderson stands at the head, without question, although we have many other books on these rural employments. If you can get but one book, let it be the above. It has 376 pages and 138 cuts. (Retail price \$2.00.)

8 Gardening for Young and Old, Harris..... 90 This is Joseph Harris' best and happiest effort. Although it goes over the same ground occupied by Peter Henderson, it particularly emphasizes thorough cultivation of the soil in preparing your ground, and this matter of adapting it to young

Postage Price without Postage

people as well as old is brought out in a most happy vein. If your children have any sort of fancy for gardening it will pay you to make them a present of this book. It has 187 pages and 46 engravings.

3] Grasses and Clovers, with Notes on Forage

Plants 20
This is by Henry A. Dreer, author of the book "Vegetables under Glass" that has had such a large sale of late. This little book tells how six tons of grass has been grown to the acre, and gives much other valuable matter.

10] Greenhouse Construction, by Prof. Taft. 15

This book is of recent publication, and is as full and complete in regard to the building of all glass structures as is the next book in regard to their management. Any one who builds even a small structure for plant-growing under glass will save the value of the book by reading it carefully.

12] Greenhouse Management, by Prof. Taft. 15

This book is a companion to Greenhouse Construction. It is clear up to the times, contains 400 pages, and a great lot of beautiful half-tone engravings. A large part of it is devoted to growing vegetables under glass, especially Grand Rapids lettuce, as well as fruit and flowers. The publisher's price is \$1.50, but as we bought quite a lot of them we can make a special price as above.

5] Gregory on Cabbages, paper. 20

5] Gregory on Squashes, paper. 20

5] Gregory on Onions, paper. 20

The above three books, by our friend Gregory, are all valuable. The book on squashes especially is good reading for almost anybody, whether they raise squashes or not. It strikes at the very foundation of success in almost any kind of business.

1] Handbook for Lumbermen. 05

5] Home Pork-making; 125 pages, illustrated. 40
I think it will pay well for everybody who keeps a pig to have this book. It tells all about the care of the pig, with lots of pictures describing cheap pens, appliances, all about butchering, the latest and most approved short cuts; all about making the pickle, barreling the meat, fixing a smoke-house (from the cheapest barrel up to the most approved arrangement); all about pig-troughs; how to keep them clean with little labor; recipes for cooking pork in every imaginable way, etc. Publisher's price is 50 cents, ours as above.

15] How to Make the Garden Pay. 1 35

By T. Greiner. Those who are interested in hotheds, cold-frames, cold green-houses, hothouses, or glass structures of any kind for the growth of plants, can not afford to be without the book. Publisher's price, \$2.00.

10] How to Keep Well and Live Long. 90

The above book by T. B. Terry is, in my opinion, destined to relieve more pain, sickness, and death than any other book in the whole world that has ever come to my knowledge. This is pretty strong language, I admit; but since Mr. Terry commenced, years ago, to urge the importance of pure air, pure water, and a simple diet of good simple food in moderate quantities, the whole wide world, doctors included, seems to be gradually falling in with him. Of course, other good and wise men commenced a similar crusade for better health long before Terry did; but he seems to have a happy faculty of getting hold of people and keeping their attention. After you once start in with the book you will be pretty sure to read it to the end, and you will ever after be a better and a happier man or woman for having read it. We have a special low price for clubbing with GLEANINGS—that is, both for \$1.50. If you have already paid for GLEANINGS a year or more in advance you can have the book for 75 cents postpaid. Since it first came out, only a short time ago, we have sold nearly 1000 copies.

3] Maple Sugar and the Sugar-bush. 25

5] Manures; How to Make and How to Use Them; in paper covers. 30

6] The same in cloth covers. 65

1] Nut Culturist, postpaid. 1 25

3] Onions for Profit. 40

Fully up to the times, and includes both the old onion culture and the new method. The book is fully illustrated, and written with all the enthusiasm; and even if one is not particularly interested in the business, almost any person who picks up Greiner's books will like to read them through.

Postage Price without Postage

8] Practical Floriculture, Henderson. 1 10

0] Small-fruit Culturist, Fuller. 75

2] Experiments in Farming, by Waldo F. Brown. 08

This little book ought to be worth its cost for what is said on each of the four different subjects; and the chapter on cement floors may be worth many dollars to anybody who has to use cement for floors, walks, or any thing else. In fact, if you follow the exceedingly plain directions you may save several dollars on one single job; and not only that, get a better cement floor than the average mason will make.

10] Our Farming, by T. B. Terry. 75

Same, paper cover, postpaid. 50
In which he tells "how we have made a run-down farm bring both profit and pleasure."

If ordered by express or freight with other goods, 10c less.

10] Talks on Manures. 1 35

By Joseph Harris. Written in conversational style, which makes it very interesting reading. It covers the subject very completely; contains numerous analyses of manures and comparative tables. The use of technical language is avoided, which makes the book of greatest value to the practical farmer. A book of 366 pages, nicely bound in cloth.

10] The Dollar Hen. 90

The above book will be clubbed with GLEANINGS for one year at \$1.50; or if you have already subscribed a year or more in advance you can have the book postpaid for 75 cents.

My opinion is, that "The Dollar Hen" is not only one of the best books on poultry that we have at the present time, but it is worth nearly as much as a dozen other books. Perhaps this is extreme, but we have very few books that are strictly up-to-date, and still fewer that pitch right into the superstitions and humbugs now scattered all through our poultry books and journals.

5] The New Rhubarb Culture. 40

Whenever apples are worth a dollar a bushel or more, winter-grown rhubarb should pay big. It does not require an expensive house nor costly appliances. Any sort of cellar where it will not freeze is all right for it; and the small amount of heat necessary to force the rhubarb costs very little. The book is nicely bound in cloth, full of illustrations, mostly photos from real work, 130 pages. Every market-gardener should have this book for the lessons taught indirectly in regard to forcing other crops besides rhubarb. Publisher's price 50c.

5] Tile Drainage, by W. I. Chamberlain. 35

Fully illustrated, containing every thing of importance clear up to the present date.

The single chapter on digging ditches, with the illustrations given by Prof. Chamberlain, should alone make the book worth what it costs to every one who has occasion to lay ten rods or more of tile. There is so much science in digging as in doing almost any thing else; and by following the plan directed in the book, one man will often do as much as two men without this knowledge.

5] Tomato Culture. 35

In three parts. Part first.—By J. W. Day, of Crystal Springs, Miss., treats of tomato culture in the South with some remarks by A. I. Root adapting it to the North. Part second.—By D. Cummins, of Conneaut, O., treats of tomato culture especially for canning factories. Part third.—By A. I. Root, treats of plant-growing for market and high-pressure gardening in general.

3] Winter Care of Horses and Cattle. 25

This is friend Terry's second book in regard to farm matters; but it is so intimately connected with his potato-book that it reads almost like a sequel to it. It you have only a horse or a cow, I think it will pay you to invest in a book. It has 44 pages and 4 cuts.

8] What to Do, and How to be Happy while Doing It. 65

The above book by A. I. Root is a compilation of papers published in *Gleanings in Bee Culture*, in 1886, '7, and '8. It is intended to solve the problem of finding occupation for those scattered over our land out of employment. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit-culture, poultry-raising, etc. Illustrated, 188 pages; cloth.

8] Same, paper covers. 40

The A. I. Root Company, Medina, Ohio

SPECIAL SALE!

Root's Goods Below Our Cost

Beekeepers will change their minds and use different kinds of supers all of a sudden. Our trade used, before section-supers, shipping cases, etc., while now nearly every beekeeper in our locality produces bulk comb honey, which, consequently, leaves us with a big stock of section supers on hand, which we are willing to sell very cheap just to dispose of them. They are all in the original packages, just as we received them from the factory, and there is absolutely nothing the matter with them, only we have hardly any more sale for them in our locality.

70 2 I-8.....	.37 each	60 2 P-8.....	.37 each

HONEY-CANS

As in previous seasons, we have prepared a very large and complete stock of honey-cans in our warehouse, ready for immediate shipment to you. Our honey-cans this season are the product of the largest independent can-manufacturing company in the United States, and are warranted to be the best grade possible to procure. Every can and case is fully guaranteed to give absolute satisfaction. The boxes are of the very best material that can be obtained for packing honey-cans, being strong and substantial, and securely nailed with cement-coated nails.

Prices quoted on application. Full line of Root's Beekeepers' Supplies always on hand.

Toepperwein & Mayfield Co.

San Antonio, Texas

A sepia-toned photograph of a forest path. The path is covered in fallen leaves and leads into the distance. On either side of the path, numerous beehives are placed on the ground. The trees are tall and thin, with their leaves creating a canopy overhead. The overall scene is peaceful and natural.

Gleanings in Bee Culture

VOL. XLI. SEPT. 15, 1913, NO. 18.

ESTABLISHED 1891

TOEPPERWEIN & MAYFIELD CO.

(Incorporated)

Cor. Nolan @ Cherry Sts., San Antonio, Texas

Factory and Warehouse

To Our Friends and Patrons:

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as those engaged in the business.

Owing to the constantly increasing demand for comb foundation and beekeepers' supplies, we were compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past years.

Although it has been a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the $5\frac{3}{8}$ -inch frames, same as described in our catalog, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the ten-frame hives.

It is the intention of the present management to increase materially the capital of the company, with the view of carrying a stock of supplies that will meet all the requirements of the trade. This will enable us to effect prompt shipments at all times, and thus avoid any delay and annoyance to customers on account of shortage of stock.

It will be our endeavor to accord our customers all possible courtesies and consideration in any matters that may arise. Mistakes will occur at times, as is only natural, and we only ask that they be brought to our attention so that they may be rectified. Our customers may be assured of the best quality of goods at as reasonable prices as are consistent with business methods.

Our catalog on request. Address

Toepperwein & Mayfield Co., San Antonio, Tex.

HOW FAR CAN A BEE SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think! The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

\$1.00 per year. 10c a single copy.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION,
DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy and No. 1 white comb, 16 to 17; white extracted, 10 to 11. Beeswax, 30. There is an active demand for white comb honey.

Boston, Sept. 4.

BLAKE-LEE CO.

INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cents in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cents, cash or trade.

Indianapolis, Sept. 10.

WALTER S. POWDER.

ALBANY.—The honey demand is improving somewhat, but prices are problematical as yet. We hear conflicting reports about the crop; but the general report is a short crop; and we are asking full prices for receipts so far—16 to 17 for white; 15 for mixed white, and hope to sustain these prices. White extracted brings 9 to 9½; amber, 7½ to 8; buckwheat 7 to 7½.

Albany, Sept. 6.

H. R. WRIGHT.

KANSAS CITY.—Since our last quotations on honey, two cars of Western comb honey have been unloaded on our market, consequently prices are somewhat lower; demand fair. We quote as follows: No. 1 white comb, 24-section cases, \$3.25 to \$3.35; No. 2 ditto, \$3.00; No. 1 amber, \$3.00 to \$3.15; No. 2 amber and dark ditto, \$2.50 to \$2.75; extracted white, per pound, 8½. Beeswax, 25 to 28.

C. C. CLEMONS PRODUCE COMPANY.
Kansas City, Mo., Sept. 3.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Honey reports continued from page 2.

SCHENECTADY.—The white comb honey received up to this time has come from local producers, and is of inferior quality, combs being more or less discolored, and not well filled. Buckwheat grades are better, but no great amount is ready for market. We think fancy white clover will bring 16 to 18; other grades, 13 to 14, according to quality; buckwheat, 12 to 13. We have made no sales of extracted in quantities yet, and are not in position to quote actual prices from sales.

Schenectady, Sept. 4. CHAS. MACCULLOCH.

NEW YORK.—Receipts of the new crop of comb honey are rather light as yet; demand is good, and we quote as follows: No. 1 and fancy white 15 to 16; some strictly choice quality will sell as high as 17; off grades, 13 to 14. There are no prices established as yet on buckwheat comb honey, as none has arrived. We think, however, that it will find ready sale at about 12 cts. per lb. Extracted remains about the same; prices unchanged, with sufficient supply to meet all demands with the exception of California sage. Beeswax is steady at 31 to 32.

New York, Sept. 5. HILDRETH & SEGELKEN.

ST. LOUIS.—The arrivals of honey here to date have exceeded those of ordinary seasons, and the present market is not very active. Southern honey in barrels and cans has been coming in this market quite freely within the last two weeks. Extracted honey is selling slowly, and we quote it in barrels at 6 to 6½ cents, and in five-gallon cans at 6½ to 6¾ cents. Fancy comb honey is nearly nominal, and not moving at all here at present, owing to the warm weather. However, we quote No. 1 fancy white at 15 to 16; No. 2, 14 to 15; light amber, 12 to 14. By the case, fancy white comb honey will bring from \$3.00 to \$3.50 per case; No. 2, \$2.50 to \$3.00, according to quality. Dark and broken honey is almost unsalable. Beeswax is in good demand, but is lower, and is now selling at 30 cents for prime. Inferior and impure sells for less.

R. HARTMANN PRODUCE CO.

St. Louis, Mo., Sept. 4.

Kind Words from our Customers

"PEACE ON EARTH, GOOD WILL TO MEN."

In renewing my subscription to GLEANINGS, please permit me to say the help I have received from a single copy in handling bees has been worth more than I have paid for a whole year's subscription. And those blessed Home talks! Eternity alone will reveal the good they have done. Many years ago, because of the great uplift these talks had given him, my attention was first called to GLEANINGS by one Fayette Lewis, of Shenandoah, Va. Living with this journal in my home for these years, I am now glad to be able to say of it, as was said of the Master, it goes "about doing good."

Purcellville, Va., July 30.

J. T. GRUBB.

KIND WORD FROM A NEW SUBSCRIBER.

I have recently subscribed for GLEANINGS, and to say I am well pleased with it would be a mild way of expressing myself. I wish to congratulate you on being editor of such a nice little semi-monthly magazine, and it seems to me as if no true lover of bees could help appreciating the many helps that are to be had in the short sketches printed therein. I have observed in the few numbers I have received that all articles published are good clean reading—a fact that can not be said of a large part of the literature published throughout the land to-day. In your August 1st number the temperance articles should sink deeply into the minds of all; and there are a great many people in this country of ours who would be greatly benefited if they would read carefully this short but helpful sketch. I address you as I would address a commander of the army, realizing that back of you there are many who are hard at work gathering for the good of mankind articles which are profitable and instructive.

A. H. BARTLETT, Agt. M. & W. R. R. R.

Marshfield, Vt., Aug. 21.

LEUTZINGER & LANE

420 to 424 Front Street, San Francisco, Cal.

THE "CABIN IN THE WOODS," ETC.

The old "cabin in the woods" made me homesick, for I am well acquainted with the country around there, and I know almost everybody you mentioned. You seemed to tell me just what I wanted to know. My father lived up there when I was a boy, but it has been 16 or 18 years since we came back to Indiana. We lived just a little way south of the Bingham church. I am 32 years old now, and have a wife and two little girls. I farm for a living, but I have a few bees. I had four colonies in the spring, have increased to ten, and have taken about 400 lbs. of comb honey. I hope you may live long and continue to "do good."

Crete, Ind., Aug. 20.

MURLIE BROWN.

[My good friend, I too often feel homesick when I even think of the old cabin in the woods and the happy hours I spent there. Were it not for the terrible winters, and oftentimes deep snows, I honestly believe I would rather live in the region of the Grand Traverse Bay than anywhere else in the world. If you can keep on increasing four colonies to ten with 400 lbs. of comb honey, you should be satisfied to stay where you are. Give our regards to the little girls, and, for that matter, I should like to send my regards to all the rest of the little girls in the whole wide world.—A. I. R.]

RUSH ORDERS

BY MAIL.—Has your “forgettery” been working? And right this minute you need foundation or other items. See page 1 of our catalog, and it gives parcel-post rates on various articles.

BY EXPRESS.—Larger shipments than can go by mail we can rush out at once. Parcel-post and express orders receive our first attention.

BY FREIGHT.—Our rule is “ship same day the order is received,” and we break it only when absolutely necessary. Notice that Lansing is the railroad center of Michigan from which freight shipments can be delivered quickest.

And we fill all orders with Root's goods. Just remember that too. Send for catalog. Beeswax wanted.

M. H. HUNT & SON, LANSING, MICH.

OPPOSITE LAKE SHORE DEPOT.

When Ordering Supplies

remember we carry a full stock and sell at the lowest catalog price. Two lines of railroad—Maine Central and Grand Trunk. Prompt service and no trucking bills.

“Griggs Saves Your Freight”

is the place all successful beemen have their eyes on now. Proof is the way orders are streaming in here from all over the United States.

Root's Shipping Cases for Honey

We are well supplied with shipping cases for your comb honey, all sizes and styles. Don't put a nice crop of honey in old musty dirty cases. Get new ones, and get the top price for your crop. . . NEW 60-POUND CANS, two in a case, a specialty. . . FIRST-CLASS ALCOHOL-BARRELS, the best package for extracted honey. We prefer barrels to cans if we get them early. Let us know what you have to offer in both COMB and EXTRACTED HONEY. We are in the market for any quantity.

Send in your BEESWAX and turn it into money. Sections and foundation sent out the day the order is received. If you are short, send to us. Quick deliveries are our pride.

S. J. GRIGGS & CO., - 26 NORTH ERIE STREET, - TOLEDO, OHIO.

“Griggs is always on the job.”

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

A bounteous crop of finest quality honey has been secured, and, resulting from the needs of beekeepers in supplies, I have experienced the busiest season that I have ever known. The demand for the Root Goods has been excessive, and I have been very fortunate in keeping my stock complete and filling orders promptly. To do this my helpers and myself were required to apply ourselves from fifteen to eighteen hours per day. We were, of course, glad enough to do this, but I am going to offer some attractive discounts for supplies to be used next year if ordered early, and this will reduce the task of having so much to look after at the busy season. I believe the discounts will be a mutual benefit to all concerned. I am always glad to quote lowest estimates on any list of goods.

A feature on which I am now specializing is sending goods by parcel post. If you are within 150 miles of Indianapolis I can have your goods delivered to your home at a very moderate cost, if the package doesn't weigh over 20 pounds.

VEEDERSBURG, IND.

Walter S. Pouder, Indianapolis.

Dear Sir:—I wish to thank you for your prompt shipment of goods which I ordered a few days ago. They were brought to my house before I thought you had time to make up the order, and you well deserve your motto, "If goods are wanted quick, send to Pouder." I inclose another order and will be glad if you will send as quick.

Yours truly,

JAMES A. LYNCH.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

873 Massachusetts Avenue

**SOME
SEASONABLE
UGGESTIONS.**

Bee-escapes,
Honey-extractors,
Uncapping-knives,
Shipping-cases,
Glass Jars,
Honey Labels,
Vells, Smokers,

Bee-brushes,
Wax-presses,
Hive-tools,
Tin Cans,
Cartons,
Bee Books,
Gloves.

You are doubtless in need of and ready to order one or more of these items. You want ROOT QUALITY and PEIRCE SERVICE of course. Why not include with this order the hives, supers, sections, foundation, etc., you will need for next season? Prices are lower now than they will be in the spring. Then it will be a great satisfaction to have every thing ready for immediate use when needed, and so be immune from the vexation and loss that may result from unavoidable delays during the rush season.

The flooded stock is pretty nearly closed out. A few odds and ends remain. If you can use any slightly damaged goods at very low prices, write for list.

Look the catalog over and make-up your order now. Do not hesitate to order even any small article needed, as the lower parcel-post rates now in effect insure delivery at trifling expense.

POWER HONEY - EXTRACTORS

Our new catalog is full of information about these labor-saving machines. With the difficulty of getting competent help, the power extractors are being sold largely in this and foreign countries, and the present demand is far greater than ever before. Read what a California producer says in a letter to a disinterested party, which we are permitted to see and publish:

GENTLEMEN:—I should like to say a few words in favor of the ball-bearing Root Automatic extractor, as I believe it is as near perfection as can be. This machine runs so easy that a few turns to get it up to speed is all that is necessary; and the men, while using the No. 17, which I formerly had, could average only 1000 lbs. per day, while with this machine they can average 2000 lbs. with but one additional man. No apiary can afford to be without one of these machines.

I feel like congratulating The A. I. Root Co. for making an invention that is such a satisfaction, and financially to the honey-producers' interests.

BEESWAX WANTED!

Recent demand for comb foundation has been good, and our stock of beeswax is running low. We offer for good average quality and prompt shipment 30 cts. per lb. cash, or 32 in trade, delivered at Medina. Shipments from the Pacific coast should be in barrels or boxes. From other Western points, pack in double bags to get the most favorable rate. Be sure to mark the shipment so it can be identified when it arrives, and send us a shipping receipt with a statement of gross, tare, and net weight shipped. This is important as it gives us something to check so as to determine whether any has been lost in transit.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, checking the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE. By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 THE BEEKEEPER AND FRUIT-GROWER. A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 CATALOG OF BEEKEEPERS' SUPPLIES. Our complete catalog will be mailed free to any address on request.
- 7 SPRING MANAGEMENT OF BEES. A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oftentimes perplexing matter. Price 10 cts.
- 8 HABITS OF THE HONEYBEE. By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cents.
- 9 HOW TO KEEP BEES. A book of 228 pages detailing in a most interesting manner the experiences of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 THE A B C OF BEE CULTURE. A complete encyclopedia of bees, of 712 pages, fully illustrated, \$2.00 postpaid; half leather, \$2.75.
- 11 GLEANINGS IN BEE CULTURE. A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 BACK-YARD BEEKEEPING. Six interesting lessons written in readable newspaper style. Many facts encouraging the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 THE BUCKEYE BEEHIVE, or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 ADVANCED BEE CULTURE. A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth; \$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted, and adding your signature, and remittance, if required.

FRENCH'S POULTRY MUSTARD

Used and Recommended by
the Most Prominent Judges
and Breeders in the United
States.

The London *Feathered World* says,
"Poultry Mustard not only increases
the egg yield but improves fertility."

Send us your name and address and we will send you, free of charge, a copy of a pamphlet edited by Ralph Allen, of Herts, England, the conductor of the original English experiments with mustard. The book contains a full account of these experiments, together with testimonials from some of the most prominent American users of French's Poultry Mustard.

The time to begin the use of French's Poultry Mustard is at the very beginning of the moulting season. At this time its results are most valuable.

We will pay the highest cash price for thoroughly ripened extracted honey. Write us, stating quality and quantity, with prices F. O. B. your station.
SPENCER APIARIES, Nordhoff, Cal.

WANTED.—Honey in car lots. If you have or expect to have a car of honey, or if a car can be had in your vicinity, write to us and state your prices, delivered on car at your station.
OGDEN BEE AND HONEY CO., Ogden, Utah.

WANTS AND EXCHANGES

WANTED.—A cimeograph and printing outfit.
GEO. E. KRAMER, Valencia, Va.

REAL ESTATE

FOR SALE.—A 20-acre farm and 100 swarms of bees.
L. FRANCISCO, Mosinee, Wis.

British Columbia, West Kootenay District; 247 acres first-class fruit land, beautifully situated in fork of two rivers, ¼ mile from railway station, 20 miles from important city. Light clearing. Subdivided into 15-acre blocks. Price \$55 per acre. Third cash, balance to suit at 7 per cent.

NELSON REAL ESTATE AGENCY, Nelson, B. C.

NATURE'S TREASURE GARDEN is calling you. Come South and grow with the country. Land \$15 an acre up; cheapest in America; two and three crops grown yearly; ample markets. Living costs low. Climate very healthful and agreeable. Farm lists, "Southern Field" magazine, and State booklets free.
M. V. RICHARDS, Land and Industrial Agent, Southern Railway, Room 27, Washington, D. C.

FOR SALE

FOR SALE.—A full line of Root's goods at Root's prices.
A. L. HEALY, Mayaguez, Porto Rico.

FOR SALE.—Full line of Root's goods at factory prices.
THOS. LITZ, Osceola Mills, Pa.

Beekeepers, let us send you our catalog of hives, smokers, foundation, veils, etc. They are nice and cheap.
WHITE MFG. CO., Greenville, Tex.

In 1912 and '13 our bees wintered perfectly in the Eureka concrete case. Write for circular and learn about them. B. T. BOSSERMAN, Williamstown, O.

FOR SALE.—A full line of beekeepers' supplies; also Italian bees and honey a specialty. Write for catalog and particulars.
THE PENN CO. (Successor to J. M. Jenkins.) Penn, Miss.

FOR SALE.—U. S. Patent No. 1056783 for a bee-feeder. Will sell either outright or by States. For further information address
MRS. JESSIE ENHENDER, Rt. 5, Greenwood, Wis.

8000 lbs. new crop of hulled yellow-sweet-clover seed (biennial); 10 lbs. by mail, prepaid, \$3.10; 50 to 100 lbs., 20 cts. per lb.; also 100 lbs. hulled white, \$28.00; alfalfa seed, 15 cts. per lb.
R. L. SNODGRASS, Augusta, Kan.

FOR SALE.—One hand-operated paper-cutter and one check-protector, a device for protecting commercial paper. The last named will be useful in business houses, and the first mentioned will be of use in a small printing establishment. I will sell either at far below cost. Correspondence solicited.
MRS. W. Z. HUTCHINSON, Flint, Mich.

Choice virgins, 40 cts. each; 3 for \$1.00; untested, 60 cts.; tested, \$1.25; breeders, \$2.50; Italian or Carniolan.
STANLEY & FINCH, 1451 Ogden Ave., Chicago, Ill.

Famous North Carolina bred Italian queens for sale. Plenty of fine queens on hand; good as the best. Up with obligations. Send in your orders. See June and July advertisements GLEANINGS for 1913. Untested, one, 75 cts.; 50, \$25; 25, \$13. Select untested, 50, \$30; 25, \$14; one, 90 cts. Circular free.
H. B. MURRAY, Liberty, N. C.

FOR SALE.—Pure golden Italian queens. Day-old virgins, 50 cts.; untested, 75 cts.; tested, \$1.00.
S. H. RICKARD, 506 Machesney Bldg., Pittsburgh, Pa.

WANTED.—Experienced apiarist to help pack bees for winter and to get ready for next season. May develop into steady work for a year or more. E. H. BRUNER, 3836 No. 44th St., Chicago, Ill.

For quick sale, 32 colonies of bees, one half in ten-frame Langstroth, one half in Danzenbaker hives, all with ample stores, and with one super for 4 x 5 sections each. No disease. All for \$100.
C. F. BUSHNELL, Gilbertsville, N. Y.

FOR SALE.—Large apiary with quantity of extra hives, supers, sections, etc. Immediate sale desired. Low price. For particulars address
J. A. WILLIAMS, Albany, Ga.

FOR SALE.—My entire apiary of 175 colonies of Italian bees with complete outfit for running the same for comb honey; also International Harvester auto truck. Selling on account of sickness.
J. S. SHATTERS, Fort Lupton, Col.

FOR SALE.—200 colonies good bees and complete outfit. Fine location, fine country, and fine local market. We make extracted and bulk comb. A fine opportunity for a good beekeeper.
J. W. SEAY, 608 Williams St., Waxahachie, Tex.

FOR SALE.—700 colonies, two supers around, patent hives, combs straight; located in four yards; good honey-house at each yard that will hold a big crop of honey. Price \$600. My crop this year is 3 cases around. M. W. HARVEY, Montrose, Colo.

Phelps' Goldens combine the qualities you want. They are great honey-gatherers, beautiful and gentle. Mated, \$1.00; tested, \$2.00 and \$3.00; breeders, \$5.00 and \$10.00.
C. W. PHELPS & SON,
3 Wilcox St., Binghamton, N. Y.

FOR SALE.—Golden Italian queens that produce Golden bees for gentleness and honey-gathering. They are equal to any. Every queen guaranteed. Price \$1.00; 6 for \$5.00.
WM. S. BARNETT, Barnett's, Va.

Golden Italian queens that produce golden bees, the brightest kind, gentle, and as good honey-gatherers as can be found. Each \$1.00; six, \$5.00; tested, \$2.00; breeders, \$5.00 to \$10.00.
J. B. BROCKWELL, Malvern Hill, Va.

Goldens and three-band Italian queens from the Golden State. Queens by return mail. No disease. One, 75 cts.; 6 for \$4.00; \$8.00 for 12. Special prices in large quantities. LEMUEL J. DUNN,
14 Garfield Ave., Rt. 6, San Jose, Cal.

Queens by return mail. Three-banded untested Italian queens, 60 cts. for 1; \$6.60 for 12, and \$50 for 100. Good as can be had at any price. No disease. Satisfaction guaranteed. If any untested queen I have sent out has proved to be impurely mated, I am willing to replace her free.
W. D. ACHORD, Fitzpatrick, Ala.

FOR SALE.—Guaranteed purely mated three-banded Italian queens. I recommend four points—gentle, prolific, extra good honey-makers, good winterers. J. E. Hand strain. State inspectors' certificate. Queens by return mail or your money back. Untested, one, 75 cts.; tested, 85 cts.; select tested, \$1.00.
J. M. GINGERICH, Rt. 3, Arthur, Ill.

FOR SALE.—By return mail, young untested Italian queens, 75 cts. each; dozen, \$8.00; select tested, \$1.00; dozen, \$10.00; a few choice breeders at \$3.00; grade queens, 50 cts. each; dozen, \$5.00; also 10 good strong five-frame nuclei at \$4.00 each, with queen on standard Hoffman frames in new home-made eight-frame hives; no disease.
WILMER CLARKE, box 200, Earlville, Mad. Co., N. Y.

Golden and three-banded Italian, also Carniolan untested, 75 cts. each; 3 to 6, 70 cts.; 6 to 12, 65 cts. each. Tested, 1, \$1.00; over 3, 90 cts. each. Bees per pound, \$1.25; nuclei per frame, \$1.50. No disease here. Every thing guaranteed.

C. B. BAKSTON, Buffalo, Leon Co., Texas.

Queens from Georgia apiaries. Hybrids, 25 cts. each. Red-clover Italians, untested, 70 cts. each; dozen, \$7.50; tested, \$1.00 each; dozen, \$10.00. Safe delivery and satisfaction guaranteed. Comb honey in shallow frames; extracted, also bulk comb packed any size to suit customer. Prices and samples sent free.

JOHN W. CASH, Bogart, Ga.

Three-banded Italian queens and bees. Untested queens, 75 cts. each; six, \$4.25; twelve, \$8.00; tested, \$1.25 each; six, \$7.00; twelve, \$12.00. For select queens, add 25 cts. each to the above prices. Nuclei without queens, one-frame, \$1.50; two-frame, \$2.50; three-frame, \$3.00; 1 lb. bees, \$1.50; ½ lb. bees, \$1.00. Add price of queen wanted with bees.

ROBT B. SPICER, Wharton, N. J.

FOR SALE.—200 colonies of bees, mostly in ten-frame hives, on solid sheets of foundation, placed upon stands 1 ft. high; requeened this year from Moore and Simmons stock. Location in orchard and alfalfa-seed district in Payette Valley. Honey-house, 400 comb-honey supers, large reversible extractor, 6000 sections, 50 lbs. surplus foundation, and horse and wagon. \$1300 cash buys the outfit if taken before Oct. 1. ROSS McCLANAHAN, Payette, Idaho.

FOR SALE.—115 colonies of Italian bees in good hives, Hoffman frames; combs on wired foundation; 200 supers complete; both hives and supers painted; 10 Porter bee-escapes with boards, foundation fastener, and every thing needed to run an apiary for comb honey. Sold \$800 worth this season; no disease; very heavy with stores. Will take \$500 for the whole if sold at once. I can leave the bees until a suitable time to move, or will sell or rent the location to purchaser. This is a bargain. Investigate. Reference, E. W. Peirce, Dealer in Root's goods, Zanesville, O. J. F. TRUESDALE, Duncan Falls, O.

MISCELLANEOUS

White and brown ferrets. Stamp for description and prices. JEWELL'S FERRET KENNELS, Spencer, O.

Single-comb White Leghorns.—\$1.00 each; pullets and cockerels, yearlings and cocks; shipped anywhere. As many as desired. Write for catalog.

WOODWORTH FARM, Wilton, Conn.

Pure home-made cane syrup, grown and made by me. This is the pure juice of our Southern cane, boiled to a density of 32 deg. Baume scale. There is nothing added to this juice. My price is \$4.50 per case of 6 1-gal. screw-cap cans, F. O. B. Mobile, Ala.

JOSEPH S. SCOTT, Mt. Pleasant, Ala.

YOUNG MAN, would you accept and wear a fine tailor-made suit just for showing it to your friends? Or a slip-on raincoat free? Could you use \$5 a day for a little spare time? Perhaps we can offer you a steady job. Write at once and get beautiful samples, styles, and this wonderful offer.

BANNER TAILORING Co., Dept. 529, Chicago.

HELP WANTED

WANTED.—Man to take charge of a small apiary on shares. U. A. VINCENT, Mars Bluff, S. C.

WANTED.—To correspond with temperate young man wishing to work with bees and go in business. Unoccupied locations for apiaries. Good opportunity for right man with small capital.

LOUIS G. SMITH, San Benito, Cal.

BEEKEEPERS' DIRECTORY

If you need queens by return mail send to J. W. K. SHAW & Co., Loreauville, Iberia Parish, La.

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Conn.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortland; St., New York.

Improved golden-yellow Italian queens for 1913; beautiful, hustling, gentle workers. Send for price list. E. E. LAWRENCE, Douiphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER.

NO. 25 JARS WITH PORCELAIN TOP.

We still have a supply of the old No. 25 jars with porcelain top which we can supply to those who prefer that style. We have them, one gross in a crate, at \$5.25 a gross, or in wood cases of two dozen each at \$1.00 per case in lots of six cases or more.

HELP WANTED.

This is the first season we can remember when we have not had more applications than we have places. We could use at present several boys, 16 years or older, and several girls or women, 16 years or older. Women are needed in our honey-bottling department, and boys for several classes of work.

ONE-POUND ROUND JARS.

Since our last notice on this popular jar we have secured from the factory which first supplied them a further supply, both in paper and wood cases. While this stock lasts we offer them at 85 cts. a box; 6 boxes, \$4.80; 30 boxes or more at 75 cts. a box for shipment from Medina only. From branch offices, add 5 cts. per case to cover extra freight and expense.

SPECIAL BARGAINS IN HALF-POUND TUMBLERS.

In filling half-pound tumblers of honey we frequently find one with a slight nick in the top edge, which is rejected, because we aim to use only perfect ware, and it would be difficult to seal such a tumbler tight for shipment. For some uses they would serve a good purpose. For instance, putting up jellies sealed with a thin coating of paraffine on top. These tumblers are in corrugated paper boxes of two dozen per box. We offer them without caps at 20 cts. a box; with tin caps, at 25 cts. a box; in lots of 20 boxes or more, 5 cts. per box less.

SWEET-CLOVER SEED.

We are now supplied with new white-sweet-clover seed unhulled, and within a week or two shall also have new hulled seed. We offer this seed for current orders at the prices given in following table:

Prices in lots of 1 lb. 10 lbs. 25 100

Melilotus alba, biennial...				
White sweet clover, hulled	.24	\$2.20	\$5.00	\$20.00
White sweet clover, unhull'd	.17	1.50	3.50	13.00
Melilotus officinalis, biennial				
Yellow sweet clover, hulled	.28	2.60	6.25	24.00
Yellow sweet clover, unhull'd	.21	1.90	4.50	17.00
Annual yellow, hulled...	.14	1.20	2.75	10.00

We have a nice stock of last year's yellow seed of good germination. We have heard from quite a number who are gathering seed for sale, and we find quite a variation in ideas as to value. There is a much larger amount of seed being saved this year, and we do not look for prices to go as high this year as last, because there will be more seed to go around.

SPECIAL NOTICES

A. I. ROOT

THAT HYBRID-TOMATO SEED.

Do not send money to me for the tomato seed. Send it to E. C. Green, Medina, Ohio—ten cents for about fifty seeds of his new hybrids.

THE SOLOMON'S ISLANDS GOURD, OR GUADA BEAN.

It has now produced three beans, or gourds, whichever you may call it. The longest is nearly a foot; and at the rate it is now growing, if frost holds off it may easily make several feet.

"CORN," THE ONLY CORN MAGAZINE IN THE WORLD.

In our issue for July 15 I gave the price of this magazine as \$1.00. I do not know how I came to make such a mistake, for the price is only 50 cts. for one year, or three years for \$1.00. Address Corn Publishing Co., Waterloo, Iowa.

BLACK MEXICAN SWEET CORN.

Just now we are almost living (!) on sweet corn; and my preference is very strongly in favor of the Black Mexican. It is sweeter than any of the other varieties, and it can be used much longer before it gets too hard to eat. Of course, it is not quite as early as the Golden Bantam and some others. Give me a couple of ears of the Black Mexican pretty well matured, and a glass of milk, and I can make a very good breakfast or dinner either, with but little else.

CANDY FOR QUEEN-CAGES, ETC.

The business at the Home of the Honeybees is assuming such dimensions that every little while I have one of my "happy surprises" because I did not know what was going on. As an illustration, in writing an article found in another column in this issue concerning water for queen-cages I was incidentally informed that we buy powdered sugar, for making the bee-candy for the cages, by the barrel; and, furthermore, that we have been using it by the barrel for several years. Just think of the number of queen-cages a barrel of sugar would provision.

"THE TRUTH ABOUT SWEET CLOVER"—THE NEW EDITION JUST OUT.

The new edition of our new book on sweet clover, revised and enlarged to 144 pages, is now ready to send out. It contains the latest developments from our experiment stations and the Department at Washington in regard to this legume that grows where nothing else will grow. More than that, it sweetens and fertilizes in a measure barren soils so that almost any thing else will grow after the crop of sweet clover. The new book tells also how sweet clover prepares the soil for alfalfa, perhaps better than any thing else. As the book is doing such wonders for agriculture and general farming, aside from the honey business, we send it out free of cost. All we ask is that you send 2 cents to pay postage.

TILE DRAINAGE, BY W. I. CHAMBERLAIN, ETC.

In 1891, after doing considerable tile draining here on our own premises in Medina, and after visiting W. I. Chamberlain, of Hudson, Ohio, who was then, and I presume is still, expert at the work, I arranged to have a little book prepared by Prof. Chamberlain, and we have since that time sold many thousand copies of it, and I am sure they have done a lot of good to the world. The reason I bring the matter up just now is that we have just sold out the first edition of the book, and our good friend Chamberlain is already at work getting out a second edition, carefully revised and up to date. We expect to have the book out about Jan. 1, and, may be, a little sooner. I expect, also, to put in an appendix to the book, in which I shall have something to say about tile drainage and sub-irrigation in Florida. The new book will be somewhat larger than the old one, and the price will probably be 50 cents by mail.

Later.—It seems that Dr. Chamberlain, before undertaking the revision, sent some inquiries to our Ohio Experiment Station, to which Director Thorne replies as follows:

Dr. Chamberlain—

My Dear Friend:—One of my stock letters reads:

"We have published nothing on tile drainage, but would advise the purchase of a little book on the subject written by Dr. W. I. Chamberlain, and published by The A. I. Root Co., Medina, Ohio." This means that we know nothing else as good. I am glad you are going to rewrite it—not that it is so very much out of date, but there is, of course, something to add, especially since the perfection of the traction ditcher. Mr. Williams and I have both recommended your book as being as late as any, and better suited to Ohio conditions.

Yours sincerely,

CHAS. E. THORNE.

Wooster, Ohio, Aug. 31.

THE "AJAX IMPROVED OXYGEN VITALIZER," 370 CHICKS FROM 370 EGGS, ETC.

Some little time ago a lady wrote me, calling my attention to a wonderful invention that would do away with "dead-in-the-shell" in the use of the incubator. I sent for particulars, and one of the advertising sheets had the above for a heading. They have a very ingenious explanation, to the effect that eggs hatched under a hen get more oxygen than any incubator at present furnishes; and their apparatus sends a constant stream of oxygen into the incubator. A bottle of water is connected to the incubator by means of a rubber tube. Then they have special tablets that, when thrown into the water, liberate slowly oxygen gas, just fast enough to give the eggs and chicks inside the benefit of the health-giving fluid. Mrs. F. J. Russel, of Summerdale, N. Y., makes oath that she hatched 370 chicks from 370 eggs, and they furnish also 22 different testimonials from those who have used the vitalizer. The oxygen furnished by the apparatus, they claim, is 99 3-10 pure. Now, what troubled me at first sight was that I am not aware of any chemical or combination of chemicals that will liberate oxygen by being thrown into water; and experts in chemistry tell me they know of no such substance. The well-known carbide for liberating acetylene gas is, of course, in common use. But acetylene gas is not oxygen by any means.

I have been waiting to find out more about this wonderful invention; and now I find in the *Rural New-Yorker* of August 30 a complaint from a man who bought half a dozen of the vitalizers. In the first test there were 32 dead in the shell; next, 54; and with a different incubator 72 died in the shells.

Now, all through these advertising sheets they put strong emphasis on sending "money back" if not satisfactory; but when the *Rural* people wrote them they said the "money back" referred only to those who bought a single vitalizer, but did not apply to agents who bought several.

On reference to Dun and Bradstreet, we find the Reliable Specialty Co., of Alexander, N. Y., is quoted blank.

Now just a word in closing. I do not like the idea of a company that does not include in its heading the name of some well-known and reliable man. I know there are lots of such "companies," especially in poultry literature. A poultry company once sent us some advertising. The man who brought it to our office ordered it inserted. We knew him and supposed him to be responsible. We never got our pay. He said we would have to collect from the "company," and as our relations had always been pleasant we let the matter drop.

Moral.—Do not send money to anybody nor take "stock" in any "great invention" unless some good reliable man comes out into the open and heads the concern.

If I have in the above done an injustice to the Reliable (!) Poultry Specialty Co. I will gladly apologize, and give them some free advertising.

THE NEW CELERY CULTURE, ETC.

The following, from our good friend T. Greiner, explains itself:

Mr. Root:—I think you are wrong in giving credit to T. Greiner for the "invention" of the "new celery culture," and for the authorship of a booklet of that title. After writing the New Onion Culture I had my eagle eye fixed on a "new celery culture," "new strawberry culture," etc.; but the Rural Publishing Co. (I believe) was the one that got ahead

of me with the "New Celery Culture." Served me right for going to sleep. But let us give credit to whom it belongs.

LaSalle, N. Y., Sept. 3.

T. GREINER.

I still feel, however, that a good deal of credit is due him in letting the world know through his book of the possibilities of celery under high-pressure gardening.

SWEET CLOVER; SOME OF ITS QUEER FASHIONS, ETC.

I received some sweet-clover seed from you last year, and sowed some with oats, and it failed. Thinking the seed was not good, late in the fall I tried it in the garden. It surprised me. It did not have time to bloom, so I kept it from freezing out, and it matured this year. I sowed more with oats, and never saw a plant. Like other grasses it will do best without a cover crop on some soils. I will try again next year with lime. T. A. STANSBERRY.

Little Falls, W. Va., Aug. 28. T.

Friend S., the above illustrates how queerly sweet clover sometimes behaves. A year ago we made a heavy seeding with oats, and did not succeed at all; but last spring when sowing oats again we put in sweet clover, and it seemed as if every seed made a plant. We have now, after the oats have been cut, a splendid stand. I should mention, however, that a heavy coating of lime was given the piece of ground about a year ago. This may have made a difference. I do not think there will be any need of protecting it from freezing unless sown very late indeed. We have always found it to germinate nicely in the fall where other stuff has been cleared off from our garden patch.

MUD-WASPS, THEIR MUD HOUSES, ETC.; OUR GOOD FRIEND MADELINE PRUITT TELLS US MORE ABOUT THEM.

Dear Mr. Root:—On page 590 of GLEANINGS for Aug. 15 you tell us about the mud-wasps in Florida, and mention one of their redeeming features. Allow me to tell you of two others. Their despised mud houses are highly valued by all grannies as one of the most valued home remedies for stopping vomiting. Detach one house about the size of a 4-oz. bottle; carefully tear up the rooms and remove the spiders, cocoons, etc., and put the mud ruins in a tumbler of water; stir for about five minutes, and strain to give to the patient, when vomiting will cease. Two glasses generally have the desired effect. At times I have had to administer the fourth, while at others one would be sufficient.

In August I always put some up in my medicine-case (some twelve houses), to keep through the winter. Wherein the virtue lies I do not know. I just imagine that, since they use a deal of their saliva in the building, that that is the ingredient that turns the trick. That the mud is mixed with a secretion of the salivary glands can not be denied. I have watched them mix up their little mud marbles, and then watched them build them on to their houses.

I have used mud of my own mixing to no avail—got it just where they did, and it did no good. The newly built houses are better than the older ones.

You also failed to say that they do away with no end of spiders. As soon as a room is built an egg is deposited on the floor or bottom of the cell; then from four to six spiders are crammed in and a door is made and locked on. They have no preference for any one kind or specimen of spider—just any thing they happen to spot that they can carry off. So in at least two ways they benefit humanity.

I believe that God placed every thing here to be of use to man in some way or other, but only we are so blind we don't catch on to all of them.

I hope this will find you and yours enjoying the best of health. God bless you and your Home papers. Long life to GLEANINGS and its editors. We admire it from cover to cover—well printed, clean advertising; size and all.

Abilene, Tex., Sept. 2.

M. E. PRUITT.

"Why do the heathen rage, and the people imagine a vain thing?"—PSALM 2:1.

Just as soon as GLEANINGS was started, or, rather, before it was started, I commenced warfare on the so-called patent beehives. Unscrupulous men were then busy going about the country selling farmers' "individual rights" for making and using their particular patent hive. I soon decided that no patent was needed, and, in fact, that the best hive in the world was a plain, simple box without top or bottom. This I called the Simplicity hive; and it has been for forty years shipped all over the world by carloads and carloads. The following letter gives us a good glimpse of the character of the men who used to go around peddling rights. He seems to be a poor discouraged remnant of the old-time custom.

Dear Mr. Root:—A man who said his name was Clark Shirley, claiming he owned two or three homes and a postoffice, has just left my house. He is trying to sell hives and farm rights, etc. He gave you a very bad name indeed, and also said that Rev. L. L. Langstroth could neither read nor write, and that his father (Shirley's father) furnished Langstroth money to patent his hive. He said your whole printing outfit could be bought for \$150, and that the A. I. Root Co. did not keep nor handle bees at all. I felt like having him arrested. I am sorry I saw him.

Well, Bro. Root, we have had two very poor honey years indeed. Last year, 1912, I didn't get a spoonful of surplus honey. This year started in well; but the dry weather cut the white clover short, and we got only about one-fourth of a crop. Bonaset is beginning to bloom now, and the bees, I hope, will gather enough to winter on. The corn crop is cut short by the dry weather.

When I sold out at Osprey, Fla., I came here to Kevil, Ky., and bought me a little home. I shall be 74 years old the 5th of November.

I was really hurt by that man Shirley for his slanderous words against you and Mr. Langstroth. May God bless you.

Kevil, Ky., Aug. 27.

J. G. NANCE.

Well, friends, the above is a little rough on father Langstroth as well as your humble servant. Brother Nance, if you see that man again, ask him to take a trip up here to Medina and see whether or not the Root Co. keeps bees. Do not worry or be troubled, dear brother. Just get your Bible and turn over to the second Psalm, where I found the heading above.

Convention Notices

The Northern Illinois and Southern Wisconsin Beekeepers' Association will be held in the courthouse at Freeport, Oct. 21, 1913. All interested in beekeeping are cordially invited to attend.

Foreign postage, 60c extra; Canadian postage, 30c extra

The New Edition of Our A B C and X Y Z of Bee Culture

The new edition of the A B C and X Y Z of Bee Culture contains 750 pages, or 150 more than the former one. On account of rewriting so many of the old articles, and the incorporation of many new ones, making the book so much larger than formerly, we are now obliged to charge \$2.00 instead of \$1.50; but we believe that the reader will acknowledge that it is cheap, even at that price. Approximately it contains nearly 600,000 words. Any volume of this size on a technical subject like beekeeping would ordinarily command a price of \$5.00.

The new edition has been most thoroughly revised by E. E. Root, ably assisted by Dr. C. C. Miller, of Marengo, Ill., the veteran comb-honey producer; by Arthur C. Miller, of Providence, R. I., banker and beekeeper; by John H. Lovell, of Waldoboro, Me., naturalist, botanist, and entomologist; and by Prof. Eugene G. Baldwin, the one who wrote that interesting series of articles on Florida beekeeping a year ago.

Up to now the old editions have been printed on standing type; but the extensive additions and revisions made it necessary to discard the old type which was becoming worn, and adopt a new scheme for getting out this work.

The fact that the new edition was to be entirely reset, from beginning to end, made it possible to make the revision much more thorough than had ever been undertaken before. In many cases, instead of patching new matter on to the old it seemed more practicable to rewrite the articles entire. A notable example of this will be found in the case of foul brood. The former edition contained six pages, while the new has sixteen.

A notable feature of this last edition is the bee botany, which was entirely overhauled, and in many cases entirely rewritten, by John H. Lovell and Prof. E. G. Baldwin mentioned above. The subject of Pollen and the Pollination of Flowers was almost entirely rewritten by Mr. Lovell. We doubt if there is another man in the country who can handle these

subjects more ably than he. Dr. C. C. Miller to a great extent rewrote "Honeycomb." He also made important suggestions (which were adopted) on the subject of comb-honey production; and well he might, for he is now regarded as one of our best if not the best authority on the production of honey in sections. Mr. Arthur C. Miller, who for so many years made a close study of the internal economy of the hive, made numerous suggestions, many of which were adopted and incorporated in the text. In other cases, where he might or might not have differed with the author and reviser, his notes were put in the form of footnotes, at the bottom of the page, and signed "A. C. M." In a similar way will be found an occasional footnote signed C. C. M. (Dr. Miller). The unsigned footnotes are by the author.

Some of the best things that A. I. Root ever wrote on bees (and he wrote a good many) still appear in this volume, and always will. It is not so much because his writings have been stricken out of this edition, but because the immense amount of new stuff made necessary by the growth of the industry has made A. I. R.'s material seem small in comparison. His familiar style will be recognized, for example, in Absconding Swarms; After-swarms; Anger of Bees; Artificial Heat; Artificial Pasturage; Bee-hunting; Bee-moth; Italian Bees; Queens; Robbing; Stings. What he has written under these heads will always remain as classic in bee culture. No man had more enthusiasm in the study of bees than A. I. Root, and that enthusiasm is so conspicuous that his writings can usually be picked out of the other matter, even though they have been skillfully interwoven with matter written by others.

Taking every thing into consideration, we feel proud of our new A B C and X Y Z of Bee Culture. It is new from cover to cover. It is the work of experts in their respective lines. It is the largest and most comprehensive bee-book in any language in the world; and yet it is sold at the popular price of only \$2.00.

Starving America

ROOT'S BEEKEEPERS' SUPPLIES . . .

You may have a catalog of supplies; but if you haven't ours you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Extensive and prosperous beekeepers are writing us frequent letters like the following:

The A. I. Root Co.:—We have bought bees almost every season for a great many years, and in this way handled several styles of frames; but to date we have not found any thing that compares with your metal-spaced frame for an all-round fixture.

For the benefit of students we have experimented with other styles of metal spacers, and in every case imperfections were soon discovered. Your metal-spaced frame has many good points to recommend it, and we began using this style of frame the first season it was put on the market, and have more than 20,000 of them in use now.

For strength and rapid manipulation this frame has no equal. We use it alike in brood-chamber and extracting-supers, as with our plan of management a frame may be in the brood-chamber at one time and in the super at another, or the reverse may be true.

Janesville, Minn., March 8, 1912.

THE HOFMANN APIARIES, per E. L. Hofmann.

Our catalog also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in the line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

EARLY-ORDER CASH DISCOUNTS

Apply Here just as they
do at the Factory

As Southwestern distributors of **ROOT'S BEEKEEPERS' SUPPLIES**, we are very glad to make this first announcement of a special discount for early orders, accompanied by cash, to our beekeeping friends throughout this territory.

We give exactly the same discount that is granted by the manufacturers of these famous goods, and the prices in our special catalog are the same as their own. There is an extra saving for you in ordering from us—**FREIGHT**. Better give this your special attention before ordering from elsewhere.

THE CASH DISCOUNT ON EARLY ORDERS PLACED IN OCTOBER IS 6 PER CENT.

This applies to every thing in the way of beekeepers' supplies except a few special articles. On large general orders we will allow the discount on some of the excepted articles, not exceeding ten to twenty per cent of the entire order.

REMEMBER WE MANUFACTURE THE FAMOUS WEED PROCESS COMB FOUNDATION.

We have a large demand for this product, and are turning out comb foundation of the finest quality. Include what you will need for the opening of next season in your early order. Shipment may be held subject to your convenience if desired; but get your order in now and save 6 per cent.

“falcon” Bee Supplies.

Shipping-cases, Extractors, Hives, etc. . . Everything for the Beekeeper. Inventory Sales.

SUPPLIES FOR 1914—Take inventory of supplies now and figure what you will need for a slim season. Get them ready at odd times in the winter; and if there is a good season you will have ample time to reorder in April and get them for use. We like to make “Inventory Sales” of “Falcon” supplies, for we know that we are dealing with an up-to-date beekeeper.

INVESTMENT—What is the investment of an extra \$25.00 in supplies to the loss of 500 pounds of honey? Resolve to change for 1914, and buy “Falcon” supplies now.

EARLY-ORDER DISCOUNT—For “Falcon” hives and supplies bought now we give an early-order cash discount equal to 12 per cent per year. You see it pays for a strictly money basis. Write for early-order discounts, and send list of wants for quotation.

“FALCON” QUALITY—In making our beehives, all of our waste lumber is made into cheap toy building-blocks, so that we are able to put better material in our hives and goods. Get a trial lot this fall so that you can see for yourself, and still have time to order 1914 supplies.

FREE SAMPLES of our famous “Falcon” foundation, made in our factory at Falconer, N. Y., cheerfully sent postpaid with copy of catalog, and name of nearest dealer if desired.

**HOW FAR CAN A BEE
SEE?**

That question has been argued “time and again,” but it doesn’t worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think! The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BUFFALO.—The market for comb honey is pretty slow here. I think it is owing to the fruit season not being at an end. Cooler weather will also help to make a better demand. Receipts are not heavy, and I think it is because the demand is slow. I think there is plenty of honey that would come to market if it would move freely. White comb honey is selling at 16 to 17. No buckwheat is in the market, and price has not been established. Not much if any thing doing in extracted.

Buffalo, N. Y., Sept. 23. W. C. TOWNSEND.

KANSAS CITY.—The receipts of comb honey are large. Three cars of Western comb are on the market, besides local shipments. The demand is good. Receipts of extracted are not large; demand fair. We quote No. 1 white comb, 24-section cases, at \$3.15 to \$3.25; No. 2, ditto, \$3.00; No. 1 amber, ditto, \$3.10; No. 2, ditto, \$2.75 to \$3.00; extracted white, per pound, 8 to 8½; extracted amber, 7 to 8. Beeswax, No. 1, 30; No. 2, 25.

C. C. CLEMENS PRODUCE CO.

Kansas City, Sept. 17.

CINCINNATI.—The crop of honey throughout the States is greater than one can imagine. While the prices are sagging somewhat it is only a question of having the nerve to hold up the price. We are still selling comb honey at 14 to 16, for a good to choice grade; while amber extracted in barrels is selling at 6½ to 9, according to the quality and quantity purchased. Please observe the above are our selling prices, not what we are paying. For choice bright yellow beeswax we are paying 30 cts., delivered here.

Cincinnati, Sept. 19. THE FRED W MUTH CO.

Honey reports continued on page 5.

30 DISTRIBUTING HOUSES FOR LEWIS BEEWARE

Send for Annual Catalog which will tell you who is your nearest Distributer. G. B. Lewis Company, Watertown, Wis.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Honey reports continued from page 2.

INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cts. in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cts., cash or trade. Indianapolis, Sept. 23. WALTER S. POWDER.

SCHENECTADY.—The quality of early comb honey coming forward is very inferior; but on account of scarcity it sells readily at 13 to 14 cts. Buckwheat is somewhat better, but not up to the standard, and commands the same price. No. 1 white would bring 16 to 18; white extracted, $8\frac{1}{2}$; dark, $7\frac{1}{2}$ to 8. Schenectady, Sept. 24. CHAS. MACCULLOCH.

ALBANY.—Honey market here is firm under light receipts and good demand. Prices are fully as high as consumption will stand. We quote best white comb, 16 to 18, according to style; No. 1 white, 16; mixed, 15; buckwheat, 13 to 14. There is a good demand for extracted, which seems to come slowly, selling—white, $9\frac{1}{2}$ to 10; nearly white, 9; light amber, 8 to $8\frac{1}{2}$; dark or buckwheat, $7\frac{1}{2}$ to 8. We think the sooner honey is marketed, the better prices will be obtained.

Albany, Sept. 22.

H. R. WRIGHT.

NEW YORK.—The new crop of comb honey is now beginning to arrive quite freely; the demand is good for all grades, and we quote fancy white at 16, and some especially fine lots will bring 17; No. 1 white, 14 to 15; No. 2 at 13; mixed, dark, and buckwheat at 11 to 12 cts. per lb. Extracted is in fair demand with sufficient supply of all grades excepting California sage. We quote white clover at 8 to $9\frac{1}{2}$, according to quality; light amber at $7\frac{1}{2}$ to 8; dark, mixed, and buckwheat at 7 to 8; Southern, in barrels, as to quality, 70 to 80 cts. per gallon. Beeswax is steady at 32.

New York, Sept. 23. HILDRETH & SEGELKEN.

CINCINNATI.—The demand for both comb and extracted honey is not as brisk as it should be for this time of the year. We are receiving quantities of both comb and extracted honey. Fancy white-clover comb honey is selling at 16 cts. per lb.; No. 1 white, \$3.50 per case of 24 sections. Off grades do not sell. White-clover extracted honey in 60-lb. cans is selling from 9 to $9\frac{1}{2}$. Amber grades are selling from $7\frac{1}{2}$ to $8\frac{1}{2}$, according to grade and quantity purchased. Beeswax is selling from \$33.00 to \$35.00 per 100. The above are our selling prices, not what we are paying.

Cincinnati, Sept. 18. C. H. W. WEBER & CO.

ST. LOUIS.—Our honey market has shown some improvement lately, and we expect a better demand for both extracted and comb honey from now on. The prices on extracted honey remain about the same, and the supply is quite sufficient to meet the demands. We quote extracted honey in barrels and half-barrels at 6 to $6\frac{1}{4}$ cts.; in five-gallon cans, at $6\frac{1}{2}$ to 6 $\frac{3}{4}$. Fancy white comb honey is selling at 15 to 16; No. 2, 14 to 15; light amber, 12 to 14; by the case, \$3.00 to \$3.25 for fancy white; No. 2, \$2.50 to \$3.00, according to quality and color. Dark or broken comb honey is almost unsalable. Beeswax has been in good demand lately, and is now quoted at 32 cts. for prime. Inferior and impure sells for less.

R. HARTMANN PRODUCE CO.

St. Louis, Sept. 24.

CHICAGO.—The market during the past six weeks has been practically one of large receipts and few sales. It is difficult now to place the best grades of comb honey at more than 17 cts. per lb., with the majority of the receipts selling at 15 to 16. The amber grades range from 1 to 3 less. The weather has been too warm up to this time to place honey with the general trade; but now that the peach season is drawing to a close there is a probability of a much more active market. Extracted honey is also quiet, with the white grades bringing from 8 to 9; amber, 7 to 8, according to kind and quality. Extracted in barrels sells at from $\frac{1}{2}$ to 1 ct. per lb. less than in cans, as the trade no longer wants it in that shape. Beeswax is steady at from 30 to 32, according to color and cleanliness.

Chicago, Sept. 18. R. A. BURNETT & CO.

Saving Money By Mail

Do not hide your savings at home. Forward them by mail to this bank and avoid loss by fire or theft.

The Savings Deposit Bank Company of Medina receives deposits from all over the world in its "Banking by Mail" Department.

When your savings are deposited in this bank they are protected by a large capital and surplus, and by the conservative management of capable business men and bankers.

Four per cent interest on Savings Accounts of \$1.00 or more.

The SAVINGS DEPOSIT BANK COMPANY Medina, Ohio

ZANESVILLE.—The demand for honey continues active and firm. Best grades of white-clover comb we quote at 18 to 20 cts. wholesale; in a jobbing way, 17 to 18. Best white extracted in 60-lb. cans is quoted at 11 cts. down to $9\frac{1}{2}$, according to quantity. For beeswax of good quality, producers receive 32 cts. in trade, 30 cts. cash.

Zanesville, O., Sept. 25.

E. W. PEIRCE.

LIVERPOOL.—Since our last report, about 128 barrels of Chilian honey have been sold—fine pile X at \$8.64; pile 1 at \$7.32 to \$7.68; pile 2 at \$6.84 to \$7.20, and pile 3 at \$6.24. There is a good demand for fine white honey; but in lower grades there is not much doing. Stocks of Jamaican are exhausted, and there is a retail business doing in Californian honey round about \$11.52. There has been more inquiry for beeswax, and 35 bags of Chilian have been sold at \$37.62 to \$39.48 per cwt., as to quality.

Liverpool, Eng., Sept. 5.

RUSH ORDERS

BY MAIL.—Has your "forgettery" been working? And right this minute you need foundation or other items. See page 1 of our catalog, and it gives parcel-post rates on various articles.

BY EXPRESS.—Larger shipments than can go by mail we can rush out at once. Parcel-post and express orders receive our first attention.

BY FREIGHT.—Our rule is "ship same day the order is received," and we break it only when absolutely necessary. Notice that Lansing is the railroad center of Michigan from which freight shipments can be delivered quickest.

And we fill all orders with Root's goods. Just remember that too. Send for catalog. Beeswax wanted.

M. H. HUNT & SON, LANSING, MICH.

OPPOSITE LAKE SHORE DEPOT.

"Griggs Saves Your Freight"

is the place all successful beemen have their eyes on now. Proof is the way orders are streaming in here from all over the United States.

Root's Shipping Cases for Honey

We are well supplied with shipping cases for your comb honey, all sizes and styles. Don't put a nice crop of honey in old musty dirty cases. Get new ones, and get the top price for your crop. . . . NEW 60-POUND CANS, two in a case, a specialty. . . . FIRST-CLASS ALCOHOL-BARRELS, the best package for extracted honey. We prefer barrels to cans if we get them early. Let us know what you have to offer in both COMB and EXTRACTED HONEY. We are in the market for any quantity.

Send in your BEESWAX and turn it into money. Sections and foundation sent out the day the order is received. If you are short, send to us. Quick deliveries are our pride.

S. J. GRIGGS & CO., - 26 NORTH ERIE STREET, - TOLEDO, OHIO.
"Griggs is always on the job."

"If Goods are wanted Quick,
send to Pouder."

Bee Supplies!

A bounteous crop of finest quality honey has been secured, and, resulting from the needs of beekeepers in supplies, I have experienced the busiest season that I have ever known. The demand for the Root Goods has been excessive, and I have been very fortunate in keeping my stock complete and filling orders promptly. To do this my helpers and myself were required to apply ourselves from fifteen to eighteen hours per day. We were, of course, glad enough to do this, but I am going to offer some attractive discounts for supplies to be used next year if ordered early, and this will reduce the task of having so much to look after at the busy season. I believe the discounts will be a mutual benefit to all concerned. I am always glad to quote lowest estimates on any list of goods.

A feature on which I am now specializing is sending goods by parcel post. If you are within 150 miles of Indianapolis I can have your goods delivered to your home at a very moderate cost, if the package doesn't weigh over 20 pounds.

MONONGAHELA, PA.

Walter S. Pouder, Indianapolis.

Dear Sir:—Comb honey arrived in excellent condition, and I am highly pleased with quality of the honey. I will say a good word about your business, and I appreciate your promptness and careful methods.

Yours,

EDWARD MAYHUGH.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

873 Massachusetts Avenue

SOME EASONABLE UGGESTIONS.

Bee-escapes,
Honey-extractors
Uncapping-knives,
Shipping-cases,
Glass Jars
Honey Labels,
Vells, Smokers,

Bee-brushes,
Wax-presses,
Hive-tools
Tin Cans,
Cartons
Bee Books,
Gloves.

You are doubtless in need of and ready to order one or more of these items. You want ROOT QUALITY and PEIRCE SERVICE of course. Why not include with this order the hives, supers, sections, foundation, etc., you will need for next season? Prices are lower now than they will be in the spring. Then it will be a great satisfaction to have every thing ready for immediate use when needed, and so be immune from the vexation and loss that may result from unavoidable delays during the rush season.

The flooded stock is pretty nearly closed out. A few odds and ends remain. If you can use any slightly damaged goods at very low prices, write for list.

Look the catalog over and make-up your order now. Do not hesitate to order even any small article needed, as the lower parcel-post rates now in effect insure delivery at trifling expense.

"FALCONER"

Write for discounts--we can save you money

C. C. Clemons Bee Supply Co., Kansas City, Mo.
128 Grand Avenue

A BEEKEEPER who uses cheap shipping-cases for his comb honey isn't necessarily mean. The chances are he's thoughtless. But many grocers or other dealers who receive his honey will not accept this generous view.

Among that number may be the very grocer he wants to influence most—the one who has the best trade in honey in that locality.

So he should use good shipping-cases, such as we make. To use them is economy, not an expense.

For particulars write us or our dealers, or consult our catalog.

THE BEEKEEPERS' REVIEW

would like to add a thousand new subscribers to their list for 1914, and are going to offer special inducements to get them. Listen: The April and May numbers contain the report of the National convention at Cincinnati, O., and in themselves contain 96 pages. The last half of 1913 contain the series of articles, 3000 colonies in 50 yards managed from one office, besides many other interesting articles that space forbids mentioning. We are printing 400 extra copies of the *Review* for the last half of this year on purpose to give to new subscribers; and as long as they last we will give the April and May numbers, containing the convention report, the last half of 1913, and all of 1914, for an even dollar. You have likely been thinking for some time that you would like the *Review*, and this will be an opportune time to get it at bargain-counter price. Address

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER.

POWER-PLANT RENEWED.

We have installed a new 150 H.P. water-tube boiler, and are resetting our 300 H.P. boiler in a new location as two 150 H.P. units, so arranged that we can use any two of the three while the third is being cleaned. By this arrangement we shall have no further need of shutting down the plant during the busy season for cleaning boiler. While we are resetting the old boiler we are short of steam capacity to run the engine on full load, and are somewhat handicapped for a few weeks in turning out stock in the wood-working building. We are securing extra power from the trolley line to help us out. We will also install a new engine in November, replacing the one which has carried our load for fifteen years.

REVISED PRICES ON BEEHIVES AND SUPPLIES.

As we go to press we are printing our revised prices, which will be mailed on application to those interested. We have adopted as our regular cover on the Dovetailed hive the metal-top flat cover which telescopes over the hive about 2½ inches in connection with a super cover designated as Rc. This being a more expensive cover adds about 20 cts. each to the price of each hive, in addition to an advance of about ten per cent. There has been an increase in price of hives, frames, section-holders, fences, separators, shipping-cases, feeders, cages, and a number of small articles. Sections are advanced 25 cts. per 1000; comb foundation, 3 cts. per lb.

An early-order cash discount of six per cent will be allowed from the new prices for cash orders during the month of October, covering a general line of bee supplies. This discount will not be allowed on orders for glass and tin honey-packages, labels, printing, cartons, booklets, bees, and queens. Where such items form less than twenty per cent of a general order the discount may be taken from the entire order.

SPECIAL NOTICES

A. I. ROOT

OFF FOR FLORIDA.

On Nov. 4, after I have cast my vote, Mrs. Root and I expect to go back to our Florida home. I give the notice thus early, so the friends who are writing me may know where to direct. Now, I hope you will excuse me for saying once more, when I get away from our office here with all its up-to-date paraphernalia, I can not write you long letters, as I have been doing all summer. Of course, I shall have a dictaphone; but the cylinders for it will have to be sent by express to Medina, to be made into type-

written letters. On this account let me ask you once more, if you want an answer to your letter, inclose an *addressed* postal card. Every little while somebody sends me a common blank postal card. Now, I can buy these anywhere for a cent apiece. I do not want postal cards nor postage stamps. I want you to write your own address, for nothing wears me out like trying to make out a scrawled name, and then hunting the letter all over to find where the writer lives. I think it an excellent plan for every man and woman (and I should like to say child) to have some printed postal cards with name and address printed on said cards. Then when you want to ask somebody a question, inclose one of these printed cards. In that way you may be sure of getting an answer of some kind straight back; for the recipient, while he is in the office getting his mail, can take a pencil, and oftentimes answer you in a few words, and sometimes a few words right off quick are worth a few dollars. You will notice when I am writing you for something I want, I inclose such a postal with my address on it. Now, one reason why I say *postal card* is because this is an age of "boiling down" things. You can put a great lot on a postal card and have it readable if you take a little pains. If you do not use a pen, use a good sharp pencil—one that will mark *black*. Skip all preliminaries, and just hustle right into your subject. Say what you think will be helpful, and then stop. If you wish, you might add something like this: "Your old Friend," A. I. ROOT.

Kind Words from our Customers

The case escapes are received. They look good to me. It saves the brood and a bad mess.
Ottawa, Ill., July 25. P. M. CORDON.

500 BABY CHICKS, ETC.

I got 500 "baby chicks" this spring (White Leghorns), and have now about 280 promising pullets. I raised all but eight per cent of the 500. Not having money to buy material for brooders I took most of the material out of cedar logs.

Your religious articles I enjoy greatly. I want to thank you with heart and pen (I wish I could do it with hand and mouth too), for your persistent fight for truth and righteousness, spiritual and social. We may not always see the fruits of our good endeavor; but the influence exerted will be counted in eternity, and the reward for every good deed will not fail to come. May God strengthen you and give you a long and blessed work day, and at last a glorious entrance into the mansions above. May he keep our hearts clean from partiality in these troublesome times.

Yours in the Lord,

Lawrence, Wash., July 30. E. A. LARSEN.

BRIBERY AND TAKING BRIBES, ETC.

Being a recent subscriber to your bee magazine, I wish to express my appreciation of the journal as a whole and of the Our Homes department in particular. My father, while a beekeeper in Iowa, was a subscriber to GLEANINGS, and I enjoyed reading every line in it, and knew where to find Our Homes. Well, one sabbath day I visited a neighboring beekeeper who also was a subscriber; and, picking up a copy of GLEANINGS, I turned to the back of the book, and, while reading, my neighbor noticed me with GLEANINGS and inquired what I was reading.

"I am reading GLEANINGS."

"Do you consider that sabbath reading?" was his next shot.

I made no answer, but laid the book aside while I inwardly wondered, "Does the man know what the book contains?"

Well, I had been reading an article by A. I. Root, "Bribing and Taking Bribes" the subject was, and pictured a salesman making inducements to the foreman to use his company's ink in the printing department. Now, that was good moral advice and sound business principles; and the lesson given there "stuck" in one mind at least, and perhaps the rebuke helped to fasten the lesson ineffaceably on my memory. I am thankful that these articles are still coming, and am not averse to having any member of the family read these splendid thoughts on any day of the week.

Boulder, Colo., July 5.

E. C. BIRD.

This set is made up of a pair of six-inch, a pair of five-inch, and a pair of three-and-one-half-inch embroidery scissors with nickel-plated and polished blades. No. 501 Set of
Quality Knives

Containers for Comb and Extracted Honey

We offer this year a very complete line of cartons for comb honey—any size or color, with any desired printing. Bottles, jars, and cans for extracted honey with capacity ranging from that of a tumbler to a barrel. Special attention is directed to our assortment of Friction-top Pails and to tin cans of ½, 1, and 5 gallon capacity. Get full information, prices, and samples.

The A. I. Root Company, Medina, Ohio.

Cash for your Honey at your door

The committee in charge of the Honey-Producers' League Fund has \$604, to be used in advertising uses of honey, and to create more demand for honey. They have purchased several thousand books entitled "The Use of Honey in Cooking," with chapters on "What is Honey?" "Food Value of Honey," "How Comb and Extracted Honey is Produced," "Why Honey Granulates, and How to Liquefy the Same;" "Why Different Flavors of Honey from Different Flowers;" "Why Use Honey in Cooking in Place of Sugar;" "Where to Keep Honey," and over one hundred recipes for the use of honey in cooking, candies, cough syrups, creams, and soaps—58 pages of valuable information.

If you want a home market for more honey than you produce, get some of these recipe books and use judgment in giving them to those you believe will use honey for table and cooking, asking each to give it a trial.

I have talked with beekeepers of several States who have been thus using these books for their customers, and who now have to buy honey to finish filling orders. To get these books before consumers I will GIVE them to beekeepers and members of the National Beekeepers' Association who may ask for them, provided they will pay postage on the books ordered, and who will, in application, state the number of colonies of bees they had in the spring of 1913, and pounds of comb and extracted honey produced this season, and prices they are selling at.

Postage on the books is 68 cts. for 100 copies. Other lots in proportion. If beekeepers want a growing home market for all their honey, here is a chance to get it for nothing. When this one lot of books is gone, others getting them later will have to pay publishers for them \$4.50 per 100 copies.

The Countryside Magazine

SUBURBAN LIFE

THE call of the countryside was never stronger than today. From the city to the country is the present trend of population, as our cities become more and more impossible for family life. For nine years SUBURBAN LIFE, The Countryside Magazine, has filled an important place in magazine literature in that it has provided a periodical devoted to the needs of those who love the country for the country's sake, and who recognize that a home means more than a house with a 25-foot front lot.

It is quite generally conceded to be the best printed magazine in America, and its illustrations and color work are the finest obtainable.

Half-Price Trial Offer

The price of SUBURBAN LIFE, The Countryside Magazine, is 25 cents a copy and \$3.00 a year, but in order to introduce it to the readers of this magazine, many of whom have never seen it, we will enter your order for

Four Months for 50 Cents

This offer is made with the understanding that it may be withdrawn any time at our pleasure after 30 days, so if you desire to obtain a four-months' subscription to this beautiful magazine at one-half price, representing only about the cost of the paper and postage, it would be well for you to fill out this coupon and send it to us by return mail.

Average Yield 100 lbs. per Colony

WHEN you subscribe for a newspaper or a magazine do you consider first the cost or whether it will be worth all its costs and more in the returns it will bring you?

"Gleanings in Bee Culture" has tried for years to be interesting and entertaining, and all the while to publish matter that is really **VALUABLE**—that will return to its subscribers many times over the subscription price. The following letter is to the point:

CORNER STONE, ARK., Sept. 19, 1913.

THE A. I. ROOT CO:—Look me up and see if my subscription to GLEANINGS has not expired. I have been a busy man this year; in other words, I have had a good many irons in the fire.

I am a "counter-hopper," salesman by trade, and my side lines have been bees, truck-growing, and chickens. You will, therefore, please excuse if I have been tardy in remitting. You have never missed sending a number; so if my time is out, I thank you for your kindness, and I will try to be more prompt in future. I think nearly as much of GLEANINGS as I do of my banner colony. But it would not have been a banner one, I am sure, if it were not for A B C and GLEANINGS, and to these two I attribute my success.

This is my third year with bees; and as A B C says go into the honey business on the tiptoe, I have followed its advice and built up from two to twelve colonies. Next season I will branch a little.

We have 2400 acres under cultivation here, all cotton, so you will readily see that cotton is my honey-plant. Well, there are a few fruit-trees scattered around, and a little clover in places that the plow can't reach, that help out in early spring; but if any one were to ask from what source my bees get their nectar I would point with a proud finger to the millions of cotton blooms.

From my twelve hives, to date, I have taken off 961 lbs. of comb honey, an average of $80\frac{1}{2}$ lbs. I shall have 200 more pounds to take off by October, which will raise my average to $96\frac{3}{4}$ lbs.; and if I were to return all unfinished sections and apply the feeders, I feel sure that my colony average would be considerably over 100 lbs. Now, I do not know, but it strikes me that I have made my bees do pretty well, and the drouth we have had too was against me to a certain extent.

The Danzenbaker hive is the hive here for the production of comb honey. I have tried other makes, but they all slip a cog somewhere, though every thing is seemingly all right.

Enclosed will find \$2.75. Send me a new A B C, continue GLEANINGS, and an additional 25 cts. to pay exchange on my check.

Yours, S. W. BOSWELL, JR.

Subscription \$1.00 per Year

Gleanings in Bee Culture

VOL. XLI. OCT. 15, 1913, NO. 20.

EARLY-ORDER CASH DISCOUNTS

Apply Here just as they
do at the Factory

As Southwestern distributors of **ROOT'S BEEKEEPERS' SUPPLIES**, we are very glad to make this first announcement of a special discount for early orders, accompanied by cash, to our beekeeping friends throughout this territory.

We give exactly the same discount that is granted by the manufacturers of these famous goods, and the prices in our special catalog are the same as their own. There is an extra saving for you in ordering from us—**FREIGHT**. Better give this your special attention before ordering from elsewhere.

THE CASH DISCOUNT ON EARLY ORDERS PLACED IN OCTOBER IS 6 PER CENT.

This applies to every thing in the way of beekeepers' supplies except a few special articles. On large general orders we will allow the discount on some of the excepted articles, not exceeding ten to twenty per cent of the entire order.

REMEMBER WE MANUFACTURE THE FAMOUS WOOD PROCESS COMB FOUNDATION.

We have a large demand for this product, and are turning out comb foundation of the finest quality. Include what you will need for the opening of next season in your early order. Shipment may be held subject to your convenience if desired; but get your order in now and save 6 per cent.

"falcon" Bee Supplies.

Shipping-cases, Extractors, Hives, etc. Everything for the Beekeeper. Inventory Sales.

SUPPLIES FOR 1914—Take inventory of supplies now and figure what you will need for a slim season. Get them ready at odd times in the winter; and if there is a good season you will have ample time to reorder in April and get them for use. We like to make "Inventory Sales" of "Falcon" supplies, for we know that we are dealing with an up-to-date beekeeper.

INVESTMENT—What is the investment of an extra \$25.00 in supplies to the loss of 500 pounds of honey? Resolve to change for 1914, and buy "Falcon" supplies now.

EARLY-ORDER DISCOUNT—For "Falcon" hives and supplies bought now we give an early-order cash discount equal to 12 per cent per year. You see it pays for a strictly money basis. Write for early-order discounts, and send list of wants for quotation.

"FALCON" QUALITY—In making our beehives, all of our waste lumber is made into cheap toy building-blocks, so that we are able to put better material in our hives and goods. Get a trial lot this fall so that you can see for yourself, and still have time to order 1914 supplies.

FREE SAMPLES of our famous "Falcon" foundation, made in our factory at Falconer, N. Y., cheerfully sent postpaid with copy of catalog, and name of nearest dealer if desired.

HOW FAR CAN A BEE

SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think! The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

\$1.00 per year. 10c a single copy.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached on all sides and evenly capped, except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and en-

tirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy and No. 1 white comb, 16 to 17; white extracted, 10 to 11. Beeswax, 30. There is an active demand for white comb honey. Boston, Oct. 2. **BLAKE-LEE CO.**

ZANESVILLE.—The demand for honey continues active and firm. Best grades of white-clover comb we quote at 18 to 20 cts. wholesale; in a jobbing way, 17 to 18. Best white extracted in 60-lb. cans is quoted at 11 cts. down to 9½, according to quantity. For beeswax of good quality, producers receive 32 cts. in trade, 30 cts. cash. Zanesville, O., Oct. 2. **E. W. PEIRCE.**

DENVER.—We quote No. 1 white comb honey at \$3.05 per case in a jobbing way; choice at \$2.88, and No. 2 at \$2.70; white extracted at 8 to 9; light amber, 7 to 8; strained, 6 to 7. We pay 26 in cash and 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION. Denver, Sept. 26.

CINCINNATI.—The demand for both comb and extracted honey is not as brisk as it should be for this time of the year. We are receiving quantities of comb and extracted honey. Fancy white-clover comb honey is selling at 16; No. 1 white is selling at \$3.50 per case of 24 sections. Off grades do not sell. White-clover extracted honey in 60-pound cans is selling from 9 to 9½ cts. per lb. Amber grades are selling from 7½ to 8½ cts. per lb., according to grade and quantity purchased. Beeswax is selling from \$33.00 to \$35.00 per cwt. The above are our selling prices, not what we are paying.

Cincinnati, Oct. 3. **C. H. W. WEBER & CO.**

30 DISTRIBUTING HOUSES FOR LEWIS BEEWARE

Send for Annual Catalog which will tell you who is your nearest Distributor. G. B. Lewis Company, Watertown, Wis.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Honey reports continued from page 2.
INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cts. in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cts. cash or trade. Indianapolis, Oct. 2. **WALTER S. POWDER.**

SCHENECTADY.—Comb honey is coming forward more freely. The white is of inferior quality, and ordinarily would be rejected by a customer; but on account of scarcity it is quickly taken at 13 to 15 cts. We have no No. 1. Buckwheat is of better quality, and sells at about the same price as this so-called white. Extracted light brings 9 to 9½; dark, 7½ to 8. Schenectady, Oct. 2. **CHARLES MACCULLOCH.**

ALBANY.—Our honey market experiences light receipts with good demand. The crop in this vicinity is very short. We quote white comb at 16 to 18, according to style, etc.; mixed or No. 1, 15 to 16; dark amber or buckwheat, 14. Extracted white, 9½ to 10; off color, 8½ to 9; amber and dark, 7½ to 8. Prices of honey are high, considering the low prices prevailing on other sweets. We strongly advise early marketing for best prices. Beeswax, 30 to 32. Albany, Oct. 4. **H. R. WRIGHT.**

NEW YORK.—New crop is now beginning to arrive quite freely. The demand is good for all grades, and we quote fancy white at 16, and some especially fine lots will bring 17; No. 1 white, 14 to 15; No. 2, 13; mixed, dark, and buckwheat, 11 to 12. Extracted is in fair demand, with sufficient supply of all grades excepting California sage. We quote white clover at 8 to 9½, according to quality; light amber, 7½ to 8; dark, mixed, and buckwheat, at 7 to 8; Southern in barrels, as to quality, 70 to 80 per gallon. Beeswax is steady at 32. New York, Oct. 2. **HILDRETH & SEGELKEN.**

CHICAGO.—The market during the past two weeks has been more active, and has nearly kept pace with the receipts; but the accumulations of the previous four weeks or more are, many of them, yet unsold. The white grades of comb honey range at from 16 to 17 cts. per lb. for A No. 1 to fancy; but the majority of the receipts sell at from 15 to 16. The amber grades range from 1 to 3 cts. per lb. less. Extracted honey is also quiet, with the white grades bringing from 8 to 9, and the ambers from 7 to 8, according to kind and quality. The weather and season of the year are now favorable for the outlet of honey; and were it not for the large offerings, the quality of the crop should command even higher prices than now prevail. Beeswax is steady at from 30 to 32, according to color and cleanliness. Chicago, Ill., Oct. 6. **R. A. BURNETT & CO.**

ST. LOUIS.—The demand for both comb and extracted honey in this market is still improving, and will continue to do so as the weather gets cooler. The receipts of extracted honey are equal to the demand. There is no material change in our quotations since our last writing, and we can still quote extracted honey in barrels and half-barrels at 6 to 6¼; in five-gallon cans, 6½ to 6¾ cts. The receipts of new comb honey are coming in quite freely, and we quote fancy white comb honey at 15 to 16; No. 2, 14 to 15; light amber, 12 to 14; fancy white by the case, \$3.00 to \$3.25; amber from \$2.50 to \$3.00, according to the quality and color. Dark and broken comb honey, or combs but partly filled, are almost unsalable. Beeswax is in good demand, and is quoted at 32 cts. for prime; inferior and impure sells for less. St. Louis, Mo., Oct. 6. **R. HARTMANN PRODUCE CO.**

A 77-year-old Subscriber Renews for Three Years

When Mr. P. B. Bromfield, President of the Bromfield & Field Advertising Agency, of New York, said to the writer some time ago, "I would rather have a circulation such as GLEANINGS IN BEE CULTURE has, in a paper with a definite aim and field, than one with many times the circulation which is obtained with the aid of premium inducements or a low price, and which has no purpose nor special reason for existence." He probably had reference to a certain class of readers of which the following are examples:

CLARKS GREEN, PA., Sept. 18, 1913.

The A. I. Root Co,
Medina, Ohio.

Dear Sirs:—

Enclosed find check for \$2.00 to renew subscription to GLEANINGS for three years. One year comes around so soon I thought I would renew for three, as it is one of the periodicals that I read almost entirely every number. I was 77 years old yesterday, and hope to live to renew at the end of the three years.

Yours truly,
JOHN R. COLVIN.

DEPARTMENT OF MATHEMATICS,
INDIANA UNIVERSITY,
BLOOMINGTON, INDIANA.

Sept. 17, 1913.

Gentlemen:—

I enclose check for \$2.00 for GLEANINGS IN BEE CULTURE for three years (this is your offer, I believe). Let subscription begin Sept. 1.

Very truly,
D. A. ROTHROCK.

The writer of the last letter, Mr. D. A. Rothrock, is one of that numerous class of business and professional men taking up beekeeping as a side line or hobby. Mr. Colvin, on the other hand, has been a subscriber for nearly thirty years. On November 10, 1910, he wrote us, when renewing his subscription: "I have taken GLEANINGS for twenty-five years or more." The statement made by Mr. Bromfield, as well as the representative letters above quoted, explain why numerous advertisers get such excellent returns from space used in GLEANINGS IN BEE CULTURE.

We shall be pleased to give definite information relative to circulation, rates, etc., to any interested party.

The A. I. Root Company, Pub'rs
Medina, Ohio

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

A bounteous crop of finest quality honey has been secured, and, resulting from the needs of beekeepers in supplies, I have experienced the busiest season that I have ever known. The demand for the Root Goods has been excessive, and I have been very fortunate in keeping my stock complete and filling orders promptly. To do this my helpers and myself were required to apply ourselves from fifteen to eighteen hours per day. We were, of course, glad enough to do this, but I am going to offer some attractive discounts for supplies to be used next year if ordered early, and this will reduce the task of having so much to look after at the busy season. I believe the discounts will be a mutual benefit to all concerned. I am always glad to quote lowest estimates on any list of goods.

A feature on which I am now specializing is sending goods by parcel post. If you are within 150 miles of Indianapolis I can have your goods delivered to your home at a very moderate cost, if the package doesn't weigh over 20 pounds.

MONONGAHELA, PA.

Walter S. Pouder, Indianapolis.

Dear Sir:—Comb honey arrived in excellent condition, and I am highly pleased with quality of the honey. I will say a good word about your business, and I appreciate your promptness and careful methods.

Yours,

EDWARD MAYHUGH.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

873 Massachusetts Avenue

6 Per Cent**6 Per Cent**

WITTE Engines

1½ to 40 H.P.

Cost Less!—Worth More!

Use Gasoline, Gas, Kerosene and Distillate

Here's my new offer, **direct** from factory to power users everywhere. **No dealer's profits.** Think of it! The **highest** standard engines for the **lowest** prices. Nobody else has these two things to offer together.

60 DAYS FREE TRIAL

WITTE engines have set the quality standard for 27 years. Better today than ever. 1½ to 40 H-P. stationary and portable sizes. All have detachable cylinders, vertical valves, four-ring pistons, electric ignition and other exclusive merits, without which no engine can now be high-grade.

On the WITTE you don't even have to press a button to start. Don't be satisfied with any out-of-date engine. Don't risk any untried, new fangled devices with high-falutin' names. Let me show you,

How to Judge Engines

My new book shows the secrets. All made plain as A. B. C. It gives my 5-year guarantee and 60-day free trial plan. Tells you how to be safe in your engine selection, even if you don't pick a WITTE. It took me 27 years to write it, but you can get it quick—just send me your name.

BETTER LIGHT from KEROSENE

Beats
Electric
or
Gasoline

TEN DAYS
FREE
SEND NO MONEY

Without sending a cent you can use this wonderful, economical light 10 days free, then return at our expense if not satisfied. Gives powerful white incandescent light, burns over 60 hours on one gallon kerosene (coal oil). No odor, smoke or noise, simple, clean, won't explode. Guaranteed. We want one person in each locality to refer customers to. Write for 10-DAY FREE TRIAL. AGENTS OFFER—agents' wholesale prices and learn how to get ONE FREE. WANTED. Make money evenings and spare time. One farmer cleared over \$500 in 6 weeks. Exclusive territory given.

MANTLE LAMP CO., 360 Aladdin Bldg., Chicago, Illinois

Detroit Kerosene Engine

Saves Time, Trouble, Expense

The Detroit Kerosene Engine is the simplest and most powerful engine you ever saw or heard of. Direct transmission of power with 3 moving parts only—no useless cams, gears or valves to take up power or get out of order. No trouble—no extra expense. Starts without cranking.

Runs on Cheap Kerosene

Will run on distillate and gasoline; but kerosene costs less than half as much as gasoline. Besides, kerosene contains more heat units than gasoline. Result—more power—steadier power—at one-half the expense of fuel. Comes to you all ready to run feed grinders, separators, pumps, saws, electric light plants, etc. All sizes in stock ready to ship.

GUARANTEED 5 YEARS—Sent on trial direct from our factory at lowest factory prices. Don't buy an engine until you have seen the "Detroit." Write today for catalog and agent's special introductory price on first order from your territory. (1899)

Special Sale of Honey

WE HAVE produced a fine lot of extracted honey this season from our eight out-yards. In addition to our own honey, we have purchased many other lots from prominent producers, and are now able to offer for prompt shipment the following flavors of extracted honey:

ALFALFA,	PALMETTO,
SWEET CLOVER,	ORANGE,
WHITE CLOVER,	LIGHT AMBER,
ALSIKE CLOVER,	DARK AMBER,
BASSWOOD,	BUCKWHEAT.

We have some very fine lots of Ohio, Michigan, and Wisconsin WHITE-CLOVER COMB HONEY. For those who have not secured a good crop, and are wanting some fine lots for their trade, we can furnish them any desired quantity.

Write for our special prices.

"MENDETS."

Mend all leaks instantly in granite ware, tin, copper, brass, cooking utensils. No heat, solder, cement, or rivet. Fit any surface. Perfectly smooth. Wonderful invention. Household necessity. Package, assorted sizes, 25 cts. postpaid.

F. PATERSON, Box 4217, Germantown, Pa.

SHIPPING - CASES

IT is poor economy, usually, to attempt a small saving in buying cases for Fancy and No. 1 honey by ordering the cheapest. Carloads of fine white honey will be sold this fall at less than its real worth because the producer puts it up in cheap inferior cases. Honey put up in our cases often brings 5 cents or more per case extra, while they cost but little more than poorly made cases of cheap lumber.

Viewed from a business standpoint, Root's shipping-cases are an investment--not an expense. See our catalog for particulars.

SOME REASONABLE SUGGESTIONS.

Bee-escapes,
Honey-extractors,
Uncapping-knives,
Shipping-cases,
Glass Jars,
Honey Labels,
Veils, Smokers,

Bee-brushes,
Wax-presses,
Hive-tools
Tin Cans.
Cartons.
Bee Books,
Gloves.

You are doubtless in need of and ready to order one or more of these items. You want ROOT QUALITY and PEIRCE SERVICE of course. Why not include with this order the hives, supers, sections, foundation, etc., you will need for next season? Prices are lower now than they will be in the spring. Then it will be a great satisfaction to have every thing ready for immediate use when needed, and so be immune from the vexation and loss that may result from unavoidable delays during the rush season.

The flooded stock is pretty nearly closed out. A few odds and ends remain. If you can use any slightly damaged goods at very low prices, write for list.

Look the catalog over and make-up your order now. Do not hesitate to order even any small article needed, as the lower parcel-post rates now in effect insure delivery at trifling expense.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

A. I. ROOT

WOMAN SUFFRAGE, ETC.

Our good friend Minnie J. Ellet writes on the outside of an envelop as follows:

"With ballots we can Carry A. Nation."

POPULAR MECHANICS MAGAZINE.

A few days ago the publishers of the above were kind enough to send us quite a lot of their magazines by freight, to be distributed among our workmen. I piled them on the sidewalk right near where the hands leave the factory. As they rushed out when the whistle blew you ought to have seen our boys grab them up. It made me think of a lot of bees around some honeycomb. Well, this magazine is only \$1.50 a year, and it is just chock full of information and about 370 pictures—pictures of every thing in the line of mechanics and invention that is going on anywhere in this world of ours. If you have not time to read it, it will be a good investment to take it just to look at the pictures, so that you may be able to keep just a little in touch with the busy world we live in. Address Popular Mechanics, 308 Washington St., Chicago.

THE CAMPINE BOOK; PRICE 75 CTS.

The above is the title of a new book on the breed of poultry called the Campine. The book, as a matter of course, describes the various points of merit of these fowls, and tells all about their good qualities, etc., and although the author has an advertisement of the Campines in the back part (\$5.00 for 15 eggs), he charges 75 cents for a pamphlet containing only 40 pages. What do you think of that way of doing business? This, of course, is not any reflection on the Campine as a breed of poultry. Many of our catalogs of incubators and other things pertaining to the poultry business contain a vast amount of information in regard to the chicken business; but as a general thing they are sent free, or on receipt of a stamp to pay postage. The above book contains almost nothing of value in regard to poultry-keeping in general. It is just a history of Campines only.

THE AMERICAN POULTRY JOURNAL YEAR-BOOK

The above is the title of a beautiful book of about 300 pages, issued by the *American Poultry Journal* last May. We would have given it a notice sooner; but the book is so attractive, full of nice colored plates, etc., that somebody took it off my desk and carried it away, and I have only just got hold of it. As the title indicates, it is a summing-up of the whole "chicken business" throughout the United States; and although I can not at present discover who the author is, so far as I can judge it is an unbiased account of what has been so far accomplished in poultry. A considerable part of the book is taken up with a report of poultry shows, which do not interest me particularly. Aside from that, there are single articles, by prominent men, worth nearly the price of the book. It is carefully indexed, so you can get the general decision in regard to ever so many topics that are now under discussion. Besides the beautiful plates in colors, there are many illustrations in black and white.

One of the articles that interested me greatly is the first one in the book (nine pages) "The Old and the New," by our veteran friend H. H. Stoddard. The price of this book, bound in cloth, is \$1.00; in paper, 50 cts. Or you can have it clubbed with *GLEANINGS*, cloth-bound, for \$1.50; paper, \$1.25. You can order of us or of the *American Poultry Journal*, Chicago.

"ALFALFA-SEED PRODUCTION."

The above is the title of a bulletin sent out by the Department of Agriculture, containing 32 pages, and a dozen or more excellent illustrations. Ernest has told you how apple-men are getting on to the fact that they can not grow a big crop of fine apples without bees in the orchard; and I gather from this bulletin that it is equally true we can not get a big crop of alfalfa seed without bees of some kind in the neighborhood; and on the other hand some beekeeper ought to plant a sufficient number of colonies of bees close to any farm that undertakes to grow alfalfa seed in any quantity. This bulletin considers the matter under the head of "Influence of Honey-gathering Insects."

"Nearly all experiments show that if insects are excluded from alfalfa flowers by means of screens very few or no seeds are produced, whereas adjoining plants not screened produce an abundance of seed if other conditions are favorable."

The bulletin contains a beautiful photograph, not only of the seeds of the alfalfa, but all the different seeds of injurious plants that are likely to be found with alfalfa. Last, but by no means least, is the dodder plant. If the alfalfa seed you get hold of contains a small quantity of sweet clover it will do no harm, but, rather, the contrary, according to our good friend Wing. This bulletin contains a vast amount of information in regard to growing alfalfa. There are other bulletins treating on alfalfa for hay and feed, and these will all be sent free on application to the Department of Agriculture.

In a similar bulletin issued in 1909 we find the following:

ALFALFA IN CULTIVATED ROWS FOR SEED PRODUCTION IN SEMI-ARID REGIONS.

Honeybees, though not nearly so effective as bumblebees, should not be underrated in this connection. It is a practice in some parts of the country to place beehives along the margins of alfalfa-fields intended for seed. Beekeepers follow with their colonies fields planted for seed, for the purpose of getting the honey. This is mutually beneficial, as larger yields of both seed and honey result.

"THE INDIAN RUNNER DUCK-BOOK."

Friend Valentine has just furnished us a new revised and enlarged edition of his duck-book—paper, 75 cts.; cloth, \$1.05, postpaid. C. S. Valentine, Ridgewood, N. J. The new book contains 166 pages, and much valuable matter pertaining to the Indian Runner; but I would suggest, first, that it needs a new index as well as a table of contents (chapter headings). There are many things about ducks that people want to get at quick without looking the book all through to find it. For instance, food for ducklings; keeping them out of the water until they are old enough; how to tell ducks from drakes; hatching duck eggs in an incubator, etc.

Now, just one thing more: There are 17 chapters in this duck-book. Seven out of the whole are devoted to discussing mainly color. Yes, I know there are long articles in our poultry-journals, and some pretty hot discussions, as to "fawn" and "white," "penciled," or ducks white all over, etc. I presume I am old-fashioned and behind the times, especially in regard to what is "standard;" but it seems to me it is a matter of very small moment whether the duck is black, white, or gray, so long as any flock of ducks can be changed from black to white and from white to black in a very short space of time, as Darwin told us years ago. And, again, there is a lot of discussion, and I should say a lot of quarreling about the color of the eggs; but so far as I can learn, the color has nothing whatever to do with the quality. If your market pays a higher price for the white eggs, of course it will pay to select a strain that lays eggs that are white. I am well aware that the whole poultry business in their great shows are giving more attention to the color of the feathers than to almost any thing else. The "egg contests" now going on all over the world are, however, a move in another direction; and it makes me glad every time I see the world coming down to the principle of "handsome is that handsome does." I would not bid the big price on the ducks that lay lots of eggs, big eggs, and nice sweet eggs, as delicious and nice as hens' eggs, or more so. This new book discusses this very matter, but it is scattered all through it. Will not our good friend Valentine make us a carefully prepared index that can be pasted in the books already out?

Goods came to hand in due time, and are all right. I am especially pleased with the smoker. It is a little giant. The Hoffman frames also are A1 in material and workmanship.

Marietta, O., July 22.

REINHARD STEHLE.

A KIND WORD FROM AWAY DOWN IN TEXAS.

Mr. Root:—You little know how much I have enjoyed your writings in the past, and I believe they have helped to make me a better man. I love your ideas of absolute right between man and man, or the golden rule; and I hope you may be spared for many years yet to continue in your usefulness.

Delia, Texas.

M. C. FULLER.

PUBLICATIONS ON BEE CULTURE

(Please use coupon below, check-
ing the numbers of items wanted.)

The pamphlets and booklets listed below are of more than ordinary interest.

- 1 MY FIRST SEASON'S EXPERIENCE WITH THE HONEYBEE. By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 THE BEEKEEPER AND FRUIT-GROWER. A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how beekeeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honeybees in close proximity to their blossoming fruit. Free.
- 4 CATALOG OF BEEKEEPERS' SUPPLIES. Our complete catalog will be mailed free to any address on request.
- 7 SPRING MANAGEMENT OF BEES. A 14-page booklet detailing the experiences of some successful beekeepers, and giving instructions on this oft-times perplexing matter. Price 10 cents.
- 8 HABITS OF THE HONEYBEE. By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cents.
- 9 HOW TO KEEP BEES. A book of 228 pages detailing in a most interesting manner the experiences of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 THE A B C OF BEE CULTURE. A complete encyclopedia of bees, of 712 pages, fully illustrated, \$2.00 postpaid; half leather, \$2.75.
- 11 GLEANINGS IN BEE CULTURE. A 64-page illustrated semi-monthly magazine—the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cents.
- 12 BACKYARD BEEKEEPING. Six interesting lessons written in readable newspaper style. Many facts encouraging the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 THE BUCKEYE BEEHIVE, or the management of bees in double-walled hives. Of special interest to the amateur beekeeper. The most complete booklet we publish for free distribution. Illustrated throughout; 84 pages.
- 14 ADVANCED BEE CULTURE. A beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that its many fine illustrations are unusually clear in every detail. Bound in an attractive and substantial cloth—\$1.00 per copy, postpaid.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted, and adding your signature, and remittance, if required.

SPECIAL NOTICES

By Our Business Manager.

EARLY-ORDER DISCOUNT.

The discount available for early cash orders received this month is 6 per cent from the revised prices now in effect. This discount eliminates a large part of the advance in price, and is worth your while saving if you are in need of goods for next season, and in position to order with payment accompanying.

REVISED PRICES.

We now have in print, ready to mail on request, an eight-page folder giving the revised prices in effect the first of this month with statement of the early-order discounts available for cash orders sent in advance of the season. This folder contains a good many prices which have not been changed, as well as those which have; but it does not have quite all the price lists of the entire catalog.

"BUSY BEE" ENGINE.

We have adopted for next season a 1½-H.P. gasoline-engine made by the same people who have supplied our engines for several years. It is water-cooled on skids, and fitted with a special flanged pulley especially adapted to running our power extractors. It will cost only \$32.50 complete, ready to run. Here is one item that has been reduced in price. I don't know where you will find its equal for the same money.

METAL-ROOFED COVER.

We have adopted as the standard cover on all our hives, unless otherwise specified, the one listed as Rc, which has a sheet of metal over the top, and which telescopes over the hive about two inches with a separate super cover under it. This had added somewhat to the cost of the hives in the new list of prices. We also give the option of other styles of cover at a reduced price. One of the other styles which we will offer is the old original one-piece board with a cleat on each end. This board may be of several pieces, but so securely put together as to be stronger and better than if in a single board. It may be of California redwood or pine. The cover we recommend is the one which we have made standard, because we believe, all things considered, it is superior to any other.

Kind Words from our Customers

The A. I. Root Co.:—I congratulate you upon your goods, and on having such neat workmen. They are simply fine—your boxes. The bees are trying to do the best they can. We have learned, and are getting more products than I ever saw.

Flushing Ohio, July 22.

J. A. MORRIS.

The A B C and X Y Z is received. The book is every thing that could be desired. It is a running mate for GLEANINGS, the best book and bee journal published. I should be glad to act as your representative in this locality, as I believe the "backyard" and farmer beekeepers would be greatly benefited by subscribing for the paper.

Colfax, Cal., Sept. 27.

MONTE HEMMY.

My dear Mr. Boyden:—Incidentally it may be of passing interest to you to know that I have beaten my former record this year, as presumably all the beekeepers in the Eastern States have or should have done. I lost something through absence, for the simple reason that my bees filled every thing full of honey, and then ceased work because there was no further room for storage. As it is, however, I have taken up to the present time, and stored away, a little short of 300 sections of white-clover honey from two colonies, the greater part of which will grade "Fancy." Although the season is somewhat late I supplied supers with foundation, and the stronger of the two colonies has almost filled the half-depth super in five days' time.

Detroit, Mich., Aug. 22.

J. M. FRANCIS.

MR. FARMER

Let the "Perfect" Sewing Awl help solve the problem "You should worry" when you can get a dollar awl for such a little work . . .

See that thread reel under the finger tips (This principle is right).

Needles in screw top hollow handle.

Sewing Awl mailed direct on your individual order for 50c each, postpaid, and insure safe delivery when the remittance is sent with order.

Repairing
Harness

THE real Awl with the exposed thread reel in natural position under the finger tips where you can automatically control the tension.

No springs or levers—so simple a child can use it.

Practical, useful, handy—can be carried in the pocket.

Repairing
Shoes

This Awl will pay for itself many times over through the convenience derived from such a tool at just the right time.

Will be found to be of special value to every household. It is a practical hand-sewing machine for the speedy repairing of harness, shoes, belts, carpets, canvas—in fact it can be used for all kinds of heavy sewing.

Repairing
Buggy Top

A PREMIUM that will not disappoint you. Each Awl is equipped with a supply of waxed thread, diamond point needles, straight and curved, and directions, in suitable mailing carton.

PREMIUM OFFER.—We will send one of these awls as premium to any reader who sends us two NEW subscriptions to **GLEANINGS IN BEE CULTURE** for six months at rate of 25 cents each.

The A. I. Root Company, Medina, O.

Cash for your Honey at your door

The committee in charge of the Honey-Producers' League Fund has \$604, to be used in advertising uses of honey, and to create more demand for honey. They have purchased several thousand books entitled "The Use of Honey in Cooking," with chapters on "What is Honey?" "Food Value of Honey," "How Comb and Extracted Honey is Produced," "Why Honey Granulates, and How to Liquefy the Same;" "Why Different Flavors of Honey from Different Flowers;" "Why Use Honey in Cooking in Place of Sugar;" "Where to Keep Honey," and over one hundred recipes for the use of honey in cooking, candies, cough syrups, creams, and soaps—58 pages of valuable information.

If you want a home market for more honey than you produce, get some of these recipe books and use judgment in giving them to those you believe will use honey for table and cooking, asking each to give it a trial.

I have talked with beekeepers of several States who have been thus using these books for their customers, and who now have to buy honey to finish filling orders. To get these books before consumers I will GIVE them to beekeepers and members of the National Beekeepers' Association who may ask for them, provided they will pay postage on the books ordered, and who will, in application, state the number of colonies of bees they had in the spring of 1913, and pounds of comb and extracted honey produced this season, and prices they are selling at.

Postage on the books is 68 cts. for 100 copies. Other lots in proportion. If beekeepers want a growing home market for all their honey, here is a chance to get it for nothing. When this one lot of books is gone, others getting them later will have to pay publishers for them \$4.50 per 100 copies.

The Countryside Magazine

SUBURBAN LIFE

THE call of the countryside was never stronger than today. From the city to the country is the present trend of population, as our cities become more and more impossible for family life. For nine years SUBURBAN LIFE, The Countryside Magazine, has filled an important place in magazine literature in that it has provided a periodical devoted to the needs of those who love the country for the country's sake, and who recognize that a home means more than a house with a 25-foot front lot.

It is quite generally conceded to be the best printed magazine in America, and its illustrations and color work are the finest obtainable.

Half-Price Trial Offer

The price of SUBURBAN LIFE, The Countryside Magazine, is 25 cents a copy and \$3.00 a year, but in order to introduce it to the readers of this magazine, many of whom have never seen it, we will enter your order for

Four Months for 50 Cents

This offer is made with the understanding that it may be withdrawn any time at our pleasure after 30 days, so if you desire to obtain a four-months' subscription to this beautiful magazine at one-half price, representing only about the cost of the paper and postage, it would be well for you to fill out this coupon and send it to us by return mail.

VOL. XL. NOV. 1, 1913, NO. 21.

17c a Day

Opens the Way to Better Pay

A few dollars, plus your promise to pay the balance at the rate of 17 cents a day, places in your hands the new "Printype" model Oliver Typewriter No. 5, our very finest production.

The best advice that can be given to the young man or woman is:

Get an Oliver Typewriter!

This offer places at your command a machine that turns time, energy, and enterprise into the pure gold of *success*.

Thousands of ambitious graduates, with the aid of Oliver Typewriters, have won their way to better pay and broader opportunity. This is the age of mechanical writing. The great world of modern business revolves around the typewriter. Typewriter operators are in demand everywhere. Our employment Bureaus in all the important cities are swamped with calls for competent Oliver operators.

Printype — OLIVER Typewriter

The Standard Visible Writer

Easy to Pay--17 Cents a Day

You can make the machine meet the payments. You doubtless spend more than this amount every day for trifles you do not need.

Thousands have paid for Oliver Typewriters on this plan without the slightest effort. Are you going to let a matter of pennies stand between you and this money-making machine?

Against *your* risk of a few dollars *we* risk a \$100 typewriter—the same machine that is used by the greatest firms and corporations throughout the world.

Shall we send you full details of the Easy Purchase Plan?

Catalog mailed on request. Address

The Oliver Typewriter Co., 116 Prospect Ave., Cleveland, O.

HOW FAR CAN A BEE SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think! The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1913.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and en-

tirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces or more, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened, weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy and No. 1 white comb, 16 to 17; white extracted, 10 to 11. Beeswax, 30. There is an active demand for white comb honey.

Boston, Oct. 18.

BLAKE-LEE CO.

INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cts. in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cts. cash or trade.

Indianapolis, Oct. 18.

WALTER S. POWDER.

SCHENECTADY.—Shipments of white comb honey from the West are now arriving, and it is less difficult to fill orders, as our market has been fairly well supplied with buckwheat. We quote No. 1 white, 16 to 17; No. 2, 14 to 15; buckwheat, 13 to 14; extracted, light, 9 to 9½; dark, 7½ to 8.

Schenectady, Oct. 18. CHARLES MACCULLOCH.

CINCINNATI.—The demand for honey is good. We sell fine table honey in 60-lb. cans from 8 to 10 cts., according to the quality and quantity; amber honey in barrels, from 5½ to 8. Comb honey, for the very fanciest we are getting from \$3.75 to \$4.00 a case. For choice bright yellow beeswax we are paying 36 cts. per lb. delivered here.

Cincinnati, Oct. 22.

THE FRED W. MUTH CO.

ZANESVILLE.—There is a healthy demand for honey with supply about balancing demand. Best grades of white comb are quoted, jobbing, 17; wholesale, 18 to 19. Best white extracted in 60-lb. cans, 9½ to 11, according to quantity. Producers are receiving for beeswax 30 cts. cash, 32 in exchange for supplies.

Zanesville, Oct. 18.

E. W. PEIRCE.

Honey reports continued on page 5.

30 DISTRIBUTING HOUSES FOR LEWIS BEEWARE

Send for Annual Catalog which will tell you who is your nearest Distributor. G. B. Lewis Company, Watertown, Wis.

We are in the Market

for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Honey reports continued from page 2.

ALBANY.—Our honey market is steady; receipts do not increase, and we are getting good stiff prices—best in some years. Fancy white clover is scarce at 17 to 18; good, 16 to 17; mixed, 15 to 16; buckwheat, 14 to 15; extracted buckwheat, $7\frac{1}{2}$ to 8; amber and mixed white clover, $8\frac{1}{2}$ to $9\frac{1}{2}$. Beeswax, 31 to 32.

Albany, Oct. 23. H. R. WRIGHT.

DENVER.—Our local market is well supplied with honey and jobbing quotations are as follows: Strictly No. 1 white, per case of 24 sections, \$2.70; choice ditto, \$2.57; No. 2 ditto, \$2.43; extracted white, 8 to 9 cts. per lb.; light amber, 7 to $7\frac{1}{2}$ cts. We are in the market for beeswax, and pay 30 cts. per lb. in cash; 32 cts. in trade, delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION.
Denver, Col., Oct. 22. F. RAUCHFUSS.

KANSAS CITY.—The supply of comb honey is liberal, demand fair. The supply of extracted is not large, but the demand is very good. We quote No. 1 white comb honey, 24-section cases, \$3.00 to \$3.10; No. 2 ditto, \$2.75 to \$2.90; No. 1 amber ditto, \$3.00; No. 2 ditto, \$2.50 to \$2.75; extracted white, per lb., 8 to $8\frac{1}{2}$. Beeswax, 25 to 30.

C. C. CLEMONS PRODUCE CO.
Kansas City, Mo., Oct. 10.

BUFFALO.—Since my last report there is very little improvement in demand for white honey; quite a call for buckwheat, but hardly any coming in. Prices are easy on white, and firm on buckwheat. No. 1 to fancy white-clover comb honey brings 16 to 17; No. 2 ditto, 12 to 14; No. 1 buckwheat comb honey, 13 to 14; white extracted, 9 to 10; slow sale; buckwheat extracted, $7\frac{1}{2}$ to 8; good demand; amber extracted, 7 to $7\frac{1}{2}$. Beeswax, 28 to 30.

Buffalo, Oct. 18. W. C. TOWNSEND.

LIVERPOOL.—The market remains very quiet, with only retail sales of all descriptions. For Chilian, average pile 3, \$5.52 c. i. f. has been paid, for the Continent; but sellers are now encouraging \$5.40. Small sales of Californian have been made at \$10.32 to \$10.80, and of New Zealand at \$10.80. There is no Jamaican on the spot at present. Since our last report the beeswax market has been firm, and about 70 bags Chilian sold on spot at \$37.02 to \$41.88 per cwt. to quality.

Liverpool, Eng., Oct. 15. TAYLOR & CO.

CHICAGO.—The market during the past two weeks has been more active, and has nearly kept pace with the receipts; but the accumulations of the previous four weeks or more are, many of them, yet unsold. The white grades of comb honey range from 16 to 17 for the A No. 1 to fancy; but the majority of the receipts sell at from 15 to 16. The amber grades range from 1 to 3 cts. per lb. less. Extracted honey is also quiet, with the white grades bringing from 8 to 9, and the ambers from 7 to 8, according to kind and quality. The weather and season of the year are now favorable for the outlet of honey; and were it not for the large offerings, the quality of the crop should command even higher prices than now prevail. Beeswax is steady at from 30 to 32, according to color and cleanliness.

Chicago, Oct. 16. R. A. BURNETT & CO.

ST. LOUIS.—The demand for both comb and extracted honey has been quite active of late, and will continue so as the weather grows cooler. While the receipts of Southern honey have not been so large the past two weeks, some Western honey has been coming in to this market to take its place. Southern light-amber extracted honey can now be quoted at $6\frac{1}{4}$ to $6\frac{1}{2}$ in barrels and half-barrels; and $6\frac{1}{2}$ to 7 in five-gallon cans. Southern white comb honey sells by the pound at 15 to 16; No. 2, 13 to 14; light amber, 12 to 14; dark, 10 to 11. Most of the comb honey in this market is sold by the case, and we can quote it as follows: Southern white, full comb honey, at \$3.00 to \$3.25; light amber from \$2.50 to \$2.75, according to quality. Dark or broken comb or combs that are partly filled are almost unsalable. The above quotations are for round lots. Beeswax is in good demand, and is now quoted at 32 cents for prime. Inferior and impure sells for less.

Bee-brushes,
Wax-presses,
Hive-tools,
Tin Cans,
Cartons,
Bee Books,
Gloves.

You are doubtless in need of and ready to order one or more of these items. You want ROOT QUALITY and PEIRCE SERVICE of course. Why not include with this order the hives, supers, sections, foundation, etc., you will need for next season? Prices are lower now than they will be in the spring. Then it will be a great satisfaction to have every thing ready for immediate use when needed, and so be immune from the vexation and loss that may result from unavoidable delays during the rush season.

The flooded stock is pretty nearly closed out. A few odds and ends remain. If you can use any slightly damaged goods at very low prices, write for list.

Look the catalog over and make up your order now. Do not hesitate to order even any small article needed, as the lower parcel-post rates now in effect insure delivery at trifling expense.

The BEEKEEPERS' REVIEW

Is the only bee journal that will have the entire write-up of the system of that Prince of Beekeepers, J. J. Wilder. This series of articles describing his system of managing 3000 colonies of bees in 50 yards, that produced 200,000 pounds of comb and extracted honey during the season of 1913, began in the July number of the REVIEW, and it now looks as if it would continue during the entire season of 1914. Space forbids our dwelling upon the magnitude of this one man's production. Would you like to sit in your office and dictate by circular letter the management of 50 yards of bees? The series is now running in the Review, and we are printing extra copies for the last half of this year, and as long as they last we will give the last half of 1913 and ALL of 1914 for \$1.00, the regular annual subscription price of the Review.

This is but one of the many features that will be brought out during the year 1914. Remember that only early subscribers will get the back numbers, as we have but 300 sets left. Write to-day, with remittance to

Bee Supplies!

A bounteous crop of finest quality honey has been secured, and, resulting from the needs of beekeepers in supplies, I have experienced the busiest season that I have ever known. The demand for the Root Goods has been excessive, and I have been very fortunate in keeping my stock complete and filling orders promptly. To do this my helpers and myself were required to apply ourselves from fifteen to eighteen hours per day. We were, of course, glad enough to do this, but I am going to offer some attractive discounts for supplies to be used next year if ordered early, and this will reduce the task of having so much to look after at the busy season. I believe the discounts will be a mutual benefit to all concerned. I am always glad to quote lowest estimates on any list of goods.

A feature on which I am now specializing is sending goods by parcel post. If you are within 150 miles of Indianapolis I can have your goods delivered to your home at a very moderate cost, if the package doesn't weigh over 20 pounds.

MONONGAHELA, PA.

Walter S. Pouder, Indianapolis.

Dear Sir:—Comb honey arrived in excellent condition, and I am highly pleased with quality of the honey. I will say a good word about your business, and I appreciate your promptness and careful methods.

Yours, EDWARD MAYHUGH.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

HUMPHREY, Mine St. Factory, Joliet, Ill.

A BEEKEEPER who uses cheap shipping-cases for his comb honey isn't necessarily mean. The chances are he's thoughtless. But many grocers or other dealers who receive his honey will not accept this generous view.

Among that number may be the very grocer he wants to influence most—the one who has the best trade in honey in that locality.

So he should use good shipping-cases, such as we make. To use them is economy, not an expense.

For particulars write us or our dealers, or consult our catalog.

FOR SALE.—4000 lbs. of choice clover and amber extracted honey put in 60-lb. cans; 8½ cts. per lb. takes the lot. JOHN R. BROWN, Rt. 2, Fall Creek, Wis.

FOR SALE.—White-clover honey in 60-lb. cans. Ripened on the hives. There is nothing finer in every respect. J. F. MOORE, Tiffin, Ohio.

FOR SALE.—Fine quality of sweet clover and alfalfa extracted honey in 60-lb. cans, \$9.00 per case of two 60-lb. cans. Write for prices on car lot. W. A. CHEEK, Merino, Colo.

FOR SALE.—Finest quality white-clover extracted honey in 60-lb. cans. State how much you want, and I will quote prices. LEONARD S. GRIGGS, 711 Avon St., Flint, Mich.

FOR SALE.—No. 1 white comb, \$3.50 per case; No. 2, \$3.00; 24 sections to case, six cases to carrier; clover extracted, two 60-lb. cans to case, 9 cts. QUIRIN-THÉ-QUEEN-BREEDER, Bellevue, Ohio.

FOR SALE.—Several tons of raspberry-milkweed honey (mostly milkweed) in new 60-lb. cans (two in case), a very fine honey. Write for price. Small sample free. P. W. SOWINSKI, Bellaire, Mich.

FOR SALE.—Light amber and white extracted honey, and the comb. Liberal sample, 10 cts. Have you any to sell? SEED AND POULTRY SUPPLY CO., Dept. H-1, St. Louis, Mo.

FOR SALE.—Our crop of "Elite" white-clover extracted honey. None better produced. Also raspberry extracted, blended with willow-herb; nearly as white as the clover; good body and flavor; 8 cts. per lb. Sample of either free. Address E. D. TOWNSEND & SONS, Northstar, Mich. (Formerly at Remus.)

FOR SALE.—Extra-fine extracted clover honey. Have had no better in 25 years. Tiered up and well ripened before extracted. It is in new 60-lb. (net) square cans, two in a box. Price on request. DR. C. G. LUFT & SON, Fremont, Ohio.

Dealers and producers who buy honey, kindly ask for a late number of the *Review*, giving a list of National members having honey for sale. Many carloads are listed in the October number. Address THE BEEKEEPERS' REVIEW, Northstar, Mich.

Pure Raspberry Honey. Left on the hives until all sealed and ripened; quality fine, thick, and rich. Raspberry honey was a very short crop this year. If you want some, better order soon. Put up in new 60-lb. tin cans; price \$6.00 a can. Sample by mail, 10 cts., which may be applied on order for honey. ELMER HUTCHINSON, Pioneer, Mich.

HONEY AND WAX WANTED

WANTED.—Comb, extracted honey, and beeswax. R. A. BURNETT & Co., 173 So. Water St., Chicago.

WANTS AND EXCHANGES

WANTED.—To hear from owner who has a good farm for sale. Send description and price. NORTH-WESTERN BUSINESS AGENCY, Minneapolis, Minn.

Good 40-light acetelene-gas generator, used two years, displaced by electricity; \$10.00. Exchange for good clover or basswood extracted honey. J. T. SHEDD, New Braintree, Mass.

FOR SALE

FOR SALE.—A full line of Root's goods at Root's prices. A. L. HEALY, Mayaguez, Porto Rico.

FOR SALE.—Full line of Root's goods at factory prices. E. M. DUNKEL, Osceola Mills, Pa.

FOR SALE.—Empty second-hand cans, two cans to the case; good as new; 25 cts. per case. C. H. W. WEBER & Co., Cincinnati, Ohio.

Beekeepers, let us send you our catalog of hives, smokers, foundation, veils, etc. They are nice and cheap. WHITE MFG. CO., Greenville, Tex.

In 1912 and '13 our bees wintered perfectly in the Eureka concrete case. Write for circular and learn about them. B. T. BOSSERMAN, Williamstown, O.

New crop of extra-fine quality alfalfa seed, \$7.00 per bushel; sacks, 25 cts. extra. R. L. SNODGRASS, Augusta, Kan.

FOR SALE.—A full line of beekeepers' supplies, also Italian bees and honey a specialty. Write for catalog and particulars. THE PENN CO., (Successor to J. M. Jenkins.) Penn, Miss.

FOR SALE.—One hand-operated paper-cutter and one check-protector, a device for protecting commercial paper. The last named will be useful in business houses, and the first mentioned will be of use in a small printing establishment. I will sell either at far below cost. Correspondence solicited.

MRS. W. Z. HUTCHINSON, Flint, Mich.

HELP WANTED

WANTED.—Man (married preferred) experienced in queen-raising; employment by the year on a salary and percentage.

OGDEN BEE AND HONEY CO., Ogden, Utah.

REAL ESTATE

FOR SALE OR TRADE.—Colorado, Utah, Idaho land.
W. A. CONNELLY, Emmett, Idaho.

FOR SALE.—Small farm suitable for bees, poultry, and truck; large house, fine shade, fruit. In one of the best buckwheat-honey sections in the State. Near trolley.
THOS. ROTHWELL, Chemung, N. Y.

FOR SALE.—My bees and fixtures; no disease; lots of alfalfa. Will lease good five-room house, truck-patches, etc. Plenty of employment when not busy with bees. If interested, write me; but don't write unless you mean business.
H. A. BUSHY,
Rydal, Republic Co., Kansas.

Virginia is the land of performance. Farmers live well and make money. Short winters, long growing season, and abundant rainfall enable two and three crops a year. Write F. H. LABAUME, Agt. Agt., Norfolk & Western Ry., Room 246 N. & W. Bldg., Roanoke, Va. Booklets, maps, etc., on request.

DON'T PAY RENT.—Buy Southern land; buy all you can; prices now extremely low; natural increase will return your money in a few years; well farmed, annual profits will run even more. Dairying, live stock, poultry, fruit, and truck—these are a few of the big money-making lines. Write now for "Southern Field" Magazine and land lists.

M. V. RICHARDS, Land and Industrial Agent,
Room 27, Southern Railway, Washington, D. C.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on common stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

A. I. Root

OUR LITTLE BOOK, "THE TRUTH ABOUT SWEET CLOVER."

Many of you may like to know what sort of reception the book is getting. Well, the clerk who has charge of that department just informed me that 49 applications came in yesterday, October 20, for the book. The greater part of them came from Oklahoma.

HOME-SEEKERS' EXCURSION TO FLORIDA.

In answer to many inquiries, permit me to say that on Nov. 4 there will be an excursion from Cleveland to Bradenton, Fla., and many other points in that State, at the low price for the round trip of only \$35.50. This includes the return trip with 25 days' limit. The same low fare may be had every first and third Tuesday. You local agent will be able to give you prices at your place and further particulars. If, however, you wish to stay all winter, as we do, it will cost you about one-half more. Mrs. Root and I are planning to start Nov. 4.

THE HIGH COST OF LIVING AND THE CHICKEN BUSINESS.

There are a good many people who do not seem to understand that there are two sides to the matter when things go "a soaring" that people must have. For instance, when my good friend the grocer tells me that eggs are down to 20 cts., instead of being up to 40, I try to look pleasant and tell him while it is bad for me it is good for poor people who want eggs, and I try to feel glad, even if my chickens temporarily almost fail to pay for their feed. And along this same line I presume we chicken folks ought not to feel glad when the price goes up to 40 cts. or more. And it is *not* myself alone, but there are many folks, especially in these latter days, who have more or less chickens in their back yard, and these people often have eggs to sell; and it is certainly a good thing for these humble, hard-working people when they get a good price—I might even say a big price—for eggs and chickens. If the people who run around with their expensive automobiles were obliged to pay a dollar for fresh eggs for breakfast, and if the dollar all went into the pocket of the workman, it is not so *very* bad after all. The poultry back of the little home gathers up the fragments from the table so that nothing is lost. And while we are about it I think it pays to have a bone-mill so as to grind up the bones that might otherwise be "kicking around;" and you can generally make arrangements with your butcher to let you have the bones and gristly pieces of meat that help along a big lot. The manufacturers of these bone-mills have some very pretty little books containing valuable suggestions to poultry-keepers, which they send out free of cost. The F. W. Mann Co., Milford, Mass., have advertised with us for many years, and I always enjoy getting a little pamphlet in regard to their bone-cutter. If you have not seen one, you had better send for it. In rearing little chicks and ducks it is almost impossible to get the best results without a certain amount of ground meat; besides the satisfaction it gives to see the little darlings chase each other around the yard for this thing that their nature seems really to *demand* to help make bones and feathers.

"POPCORN FOR THE HOME."

The above is the title of Farmers' Bulletin 553, and may be had free of charge on application to the Department of Agriculture, Washington. I have long been aware that popcorn is a valuable and healthful article of food—that is, if grown on the farm and popped by the farmer's children. If you buy it on the streets at the popcorn stands or wagons, it is too much of a roundabout way to "reduce the high cost of living." If the farmer's children grow it in the garden and pop it themselves it is not only a short cut from "producer to consumer," but the "producers" in this case do not, as a rule, command very big wages. In our family of seven children, years ago, popcorn ground in a coffee-mill and eaten with milk used to be a favorite article of diet, and I believe now I would rather have it than any of the cereals put up in packages to be had at our grocery.

I think it will pay you to send for this bulletin.

It tells just how to manage popcorn to the best advantage, discusses and pictures the various corn poppers, including a home-made one that could be made by any boy, etc.

You will notice I have spoken rather discouragingly about buying your popcorn at the popcorn wagon—that is if you wish to reduce the high cost of living; but if the boy on the farm who raises the corn chooses to pop it and carry it to market, that is turning the whole matter around the other way. When I am riding on the cars I am always glad to see the "popcorn" boys, and I try to have some nickels ready so as to buy a package of corn, whether I want it or not. One reason why I do not eat it myself, instead of giving it to some hungry urchin on the cars, is because I know it is not best for me (an old man) to eat any thing, not even popcorn, between meals. If I can get hold of a package at breakfast or dinner time, then the popcorn is all right; but it needs to be chewed very thoroughly. Do not forget that, if you have to be careful about what you eat. By the way, this bulletin reminds me of something I had almost forgotten. There are a great many varieties of popcorn. They tell us the seedsmen catalog as many as two dozen, and some of them are beautifully colored. These little ears of colored corn always please the children. God bless the boys (and girls) who like the fun of helping to grow different kinds of popcorn in their own garden; and after it is grown, boys and girls who help to reduce the high cost of living by popping it themselves in their own home.

Convention Notices

The New York State Association of Beekeepers' Societies will hold its next annual meeting in Rochester, Dec. 2 and 3, 1913. We expect to have the usual good time renewing old acquaintances and forming new ones, and learning from the advice and experience of those working in our chosen field. All those interested in beekeeping are urged to be present. You can not afford to stay away, as we often get advice free that will bring us many dollars.

Camillus, N. Y.

IRVING KINYON, Sec.

The 23d annual meeting of the Illinois State Beekeepers' Association will be held at the State House, November 5 and 6, 1913.

Good hotel accommodations can be had at the New Argus Hotel, 214 S. 4th St., European plan, rooms 50 cts. and up.

Our President, E. J. Baxter, of Nauvoo, Ill., will preside. No formal program. The question-box will be made a leading feature, coupled with the reading of prize essays, as follows: \$5, \$4, \$3, and \$2 for 1st, 2d, 3d, and 4th best essays—not to exceed 500 words, and to be read by the parties writing them.

While it is not defined, it is supposed the parties are to be beekeepers, or members of beekeepers' families. There are to be no arguments on the papers read, and no criticisms; and when all read, they will be passed upon by a ballot of the members of the association, as shall be directed by the convention.

This has been a fairly good year with beekeepers, and we hope to see them show how thankful they are by coming out and telling it to their fellow-members.

Miss Stewart, of Chicago, whom we had last year, will be our reporter, and we hope every one who attends will feel inspired to say something good for her to catch for our thirteenth annual report.

We want a good number to answer roll-call in a picture for those members who do not attend to pass judgment on.

JAMES A. STONE, Secretary.

FLORIDA—A "CORRECT KNOWLEDGE" OF IT.

You are doing the best work imaginable, friend Root, in spreading a *correct* knowledge of what can be done and what not, in our grand old Florida.

DeLand, Fla., Oct. 17.

EDW. G. BALDWIN.

The A. I. Root Co.:—I had very good luck with my bees this summer, getting over 800 sections nice honey, besides what we used; over 700 sections finished and sealed. I had four swarms, spring count, increasing to nine this summer.

Ohio City, Oct. 2.

F. G. PENNELL.

This Washer Must Pay for Itself

A MAN tried to sell me a horse once. He said it was a fine horse, and had nothing the matter with it. I wanted a fine horse. But I didn't know any thing about horses much. And I didn't know the man very well either.

So I told him I wanted to try the horse for a month. He said "All right, but pay me first, and I'll give you back your money if the horse isn't all right."

Well, I didn't like that. I was afraid the horse wasn't "all right," and that I might have to whistle for my money if I once parted with it. So I didn't buy the horse although I wanted it badly. Now this set me thinking.

You see I make Washing Machines—the "1900 Gravity" Washer.

And I said to myself, lots of people may think about my Washing Machine as I thought about

the horse, and about the man who owned it.

But I'd never know, because they wouldn't write and tell me. You see I sell my Washing Machines by mail. I have sold over half a million that way.

So, thought I, it is only fair enough to let people try my Washing Machines for a month, before they pay for them, just as I wanted to try the horse.

Now, I know what our "1900 Gravity" Washer will do. I know it will wash the clothes, without wearing or tearing them, in less than half the time they can be washed by hand or by any other machine.

I know it will wash a tub full of very dirty clothes in Six Minutes. I know no other machine ever invented can do that, without wearing out the clothes.

Our "1900 Gravity" Washer does the work so easy that a child can run it almost as well as a strong woman, and it doesn't wear the clothes, fray the edges, nor break buttons the way all other machines do.

It just drives soapy water clear through the fibers of the clothes like a force pump might.

So, said I to myself, I will do with my "1900 Gravity" Washer what I wanted the man to do with the horse. Only I won't wait for people to ask me. I'll offer first, and I'll make good the offer every time.

Let me send you a "1900 Gravity" Washer on a month's free trial. I'll pay the freight out of my own pocket, and if you don't want the machine after you've used it a month, I'll take it back and pay the freight too. Surely that is fair enough, isn't it?

Doesn't it prove that the "1900 Gravity" Washer must be all that I say it is?

And you can pay me out of what it saves for you. It will save its whole cost in a few months, in wear and tear on the clothes alone. And then it will save 50 cents to 75 cents a week over that in washwoman's wages. If you keep the machine after the month's trial, I'll let you pay for it out of what it saves you. If it saves you 60 cents a week, send me 50 cents a week till paid for. I'll take that cheerfully, and I'll wait for my money until the machine itself earns the balance.

Drop me a line to-day, and let me send you a book about the "1900 Gravity" Washer that washes clothes in six minutes.

Address me this way—H. L. Barker, 1127 Court Street, Binghamton, N. Y. If you live in Canada, address 1900 Washer Co., 355 Yonge St., Toronto, Ontario.

Kind Words from our Customers

Dear Mr. Root:—I wish to thank you for those blessed Home talks. I have been greatly uplifted by them. I also enjoy very much reading the temperance articles. GLEANINGS ought to be read in every American home. Mrs. H. G. HANSON.

Osakis, Minn., Sept. 28.

Mr. Root:—Bless God from whom all blessings flow. I am not a beekeeper, but I delight in GLEANINGS greatly in our home. Thank God for the July 15th issue. I delight to hear from all over the world the wisdom of God.

Henniker, N. H., Sept. 16. E. E. PILLSBURY.

Give my respects to A. I. Root, who writes Home notes. Bang the whisky out, every time. Our colony paid duty (by government returns) on four million pounds' worth of whisky and beer. God knows what the people paid retail. The figures quoted are wholesale. All are working for a bare majority vote here. Palmerston, Otago, N. Z. J. H. APPLEYBY.

The A. I. Root Co.:—My bees have done splendidly this year. You recall I bought a tested Italian queen from you last summer. I have taken two colonies from her hive this season, and have already, Aug. 9, taken 180 lbs. of nice comb honey, and shall almost certainly get 30 lbs. more, if I can prevent swarming. The hive is now greatly crowded. I clipped her wings, so I think there is little danger of losing my queen. I have queened all my hives with her offspring, so I expect to see some honey next season. H. B. ARBUCKLE.

Dept. of Chemistry, Agnes Scott College, Maxwelton, W. Va., Aug. 9.

Mr. Root:—I wish to congratulate you, and thank you at the same time, for the splendid articles you have written for Our Homes in the last few numbers. If they have done as much good to others as they have to me (which they undoubtedly have), they certainly are fulfilling their mission, as I must confess that, since reading the same, and saying amen to them as you have done during that splendid sermon. I have read in the Bible daily—something I have not done, I am ashamed to say, for some time, and I truly hope that God may permit you to continue this good work for many years to come as I know your talks do fully as much good as many a millionaire's money.

I always read Our Homes the very last thing in GLEANINGS, thus enjoying the anticipation of reading something good at the last.

I have loaned GLEANINGS to some of my non-beekeeping friends to read your department, and they also are very much impressed with your helpful and instructive articles.

ALBERT MATER.

Gloversville, N. Y., Oct. 4.

In forwarding my renewal I wish to tell of my appreciation of GLEANINGS, especially its high moral tone and the effort to help us all to reach a higher plane of civilization and Christianity. Its expositions of frauds, humbugs, and catch-penny schemes are valuable to many of us who might often be swindled by slick advertisers. Much of the past thirty years I have read GLEANINGS, and though now living in town its High-pressure Gardening is very interesting, as well as its bee lore.

We have nearly 1000 lbs. of honey (extracted) from our bees this year.

A. I. R.'s department is also highly valued. Also its denunciation of drink and tobacco, and its stand on all moral questions.

We now have women suffrage here; also the initiative, referendum, and recall, and were leaders in the direct election of United States Senators. We have just recalled our county judge and one of the three county commissioners. While some blunders may be made with our new laws we feel that we have progressed, and are not likely to return to former methods.

We notice with pleasure Ohio's efforts toward advanced methods, and hope GLEANINGS may long flourish to help in the uplift of humanity.

Oregon City, Ore., Sept. 8.

CLARK STUGE.

NO. 501 SET OF QUALITY KNIVES

The A. I. Root Co.
Medina, Ohio

No. 501 Set of
Quality Knives

The A. I. Root Co.:—I must say I have been well pleased with Root quality and service. The queen cage candy was just right and the service prompt. I hope to be a *GLEANINGS* advertiser another year.
Pentz, Pa., Sept. 23. J. B. HOLLOPETER.

By the way, we received a full colony hive from you last year in May (outfit No. 6). Since then we have four colonies, and two of them have given us 75 lbs. of comb honey each, and 50 more each coming, very fine white-clover comb honey.
Columbus, Ohio, July 24. A. H. SCHORY.

The A. I. Root Co.:—The colony of bees which I got from you last year has given me two swarms, very strong ones, and all are making fine honey crops. The new ones are also doing well.
Fairhope, Ala., Sept. 1. E. W. JEFFERSON.

I bought your beginner's outfit this spring. The bees have never swarmed, so far as I know; but they have stored a good bit of honey. All my four supers are on, three being full, 28 sections each.
Mrs. JOHN D. FEARHAKE.
New Canaan, Conn., Aug. 4.

EARLY-ORDER CASH DISCOUNTS

Apply Here just as they
do at the Factory

As Southwestern distributors of **ROOT'S BEEKEEPERS' SUPPLIES**, we are very glad to make this first announcement of a special discount for early orders, accompanied by cash, to our beekeeping friends throughout this territory.

We give exactly the same discount that is granted by the manufacturers of these famous goods, and the prices in our special catalog are the same as their own. There is an extra saving for you in ordering from us—**FREIGHT**. Better give this your special attention before ordering from elsewhere.

THE CASH DISCOUNT ON EARLY ORDERS PLACED IN NOVEMBER IS 5 PER CENT.

This applies to every thing in the way of beekeepers' supplies except a few special articles. On large general orders we will allow the discount on some of the excepted articles, not exceeding ten to twenty per cent of the entire order.

REMEMBER WE MANUFACTURE THE FAMOUS WEED PROCESS COMB FOUNDATION.

We have a large demand for this product, and are turning out comb foundation of the finest quality. Include what you will need for the opening of next season in your early order. Shipment may be held subject to your convenience if desired; but get your order in now and save 5 per cent.

**HOW FAR CAN A BEE
SEE?**

That question has been argued “time and again,” but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think!

The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . . It teaches people to see the wonders and beauties of nature.

HONEY MARKETS

The prices listed below are intended to represent as nearly as possible the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached on all sides and evenly capped, except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION,
DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the

wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy and No. 1 white comb, 16 to 17; white extracted, 10 to 11. Beeswax, 30. There is an active demand for white comb honey.

Boston, Nov. 5.

BLAKE-LEE CO.

INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cts. in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cts. in cash or trade.

Indianapolis, Nov. 5.

WALTER S. POWDER.

LIVERPOOL.—Our honey market has been extremely dull for the past fortnight, and sales are retail of all descriptions. Beeswax market is very firm; 45 bags of Chilean sold at \$37.92 to \$30.08 per cwt., thus clearing the first-hand stock.

Liverpool, Eng., Oct. 29.

TAYLOR & CO.

CHICAGO.—Little change in market since our last report, yet the supply is larger and prices are weak—that is, a buyer of quantities can get concessions from prices asked. Several large consignments of Western honey are here, and more are following. Beeswax is steady, and meets with ready sale at former prices.

Chicago, Nov. 4.

R. A. BURNETT & CO.

ZANESVILLE.—There is practically no change in the market here. Best grades of white comb bring in a jobbing way 16 to 17; wholesale, 18 to 19; best white extracted, 9½ to 11, according to quantity. Arrivals are fairly liberal, and the demand continues good. Producers of beeswax are receiving 30 cts. cash, 32 in exchange for supplies.

Zanesville, Nov. 4.

E. W. PEIRCE.

Honey reports continued on page 5.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Honey reports continued from page 2.
ALBANY.—The honey market is quiet, with light receipts and good demand. We quote fancy white clover at 16 to 17; good 15 to 16; fancy buckwheat, 14 to 14½; good 13 to 14; extracted is slow; buckwheat, 7½ to 8; amber, 7½ to 8; white clover, 8½ to 9. Beeswax, 32.
Albany, Nov. 6.

H. R. WRIGHT.

DENVER.—Our local market is well supplied with honey, and jobbing quotations are as follows: Strictly No. 1 white, per case of 24 sections, \$2.70; choice ditto, \$2.57; No. 2 ditto, \$2.43; extracted white, 8 to 9 cts. per lb.; light amber, 7 to 7½ cts. We are in the market for beeswax, and pay 30 cts. per lb. in cash, 32 cts. in trade, delivered here.

Denver, Colo., Nov. 6.

F. RAUCHFUSS.

THE COLORADO HONEY-PRODUCER'S ASSOCIATION,

SCHENECTADY.—Many retail dealers in honey have now secured sufficient stock to last several weeks, and the demand at present is not so large on that account, and there is quite a stock on our market, with no change of prices. We quote fancy white at 16 to 18; No. 1, 15 to 16; mixed and buckwheat, 12 to 14, according to style and quality; extracted white, 9 to 9½; dark, 7½ to 8, in 60-lb. cans and kegs.

Schenectady, Nov. 6. CHARLES MACCULLOCH.

NEW YORK.—The demand for comb honey is good, especially for fancy white stock. While the crop in the Eastern States has been short, some large shipments of western alfalfa comb honey have arrived, and prices are now somewhat declining. We quote fancy white at 15 to 16; No. 1, 14; lower grades, 12 to 13; dark, 10 to 11. Extracted is in fair demand, with sufficient supply, and prices ruling about the same as our last quotation, with the exception of West Indian, which is rapidly declining in price, and selling at 65 to 70 cts. per gallon. Beeswax is steady at 31 to 32.

New York, Nov. 5. HILDRETH & SEGELKEN.

CINCINNATI.—The demand for both comb and extracted honey is not as brisk as it should be for this time of the year. We are receiving quantities of both comb and extracted honey. Fancy white-clover comb honey is selling at 16. No. 1 white is selling at \$3.50 per case of 24 sections. Off grades do not sell. White-clover extracted honey in 60-lb. cans is selling from 9 to 9½. Amber grades are selling from 7½ to 8½, according to grade and quantity purchased. Beeswax is selling from \$33.00 to \$35.00 per hundred. The above are our selling prices, not what we are paying.

Cincinnati, Nov. 3. C. H. W. WEBER & Co.

The A. I. Root Co.—Of the three tested queens I received of you last fall, two of them brought in the goods. *** From each of the two tested queens I have six cases—168 sections to the present. The seventh case, put on underneath, is also well filled but not completed, while there will be another case to go underneath that one to-morrow. This crop is all white clover and alsike. This is an excellent record, but it is not yet done. We have a heavy flow of white clover running now, and it has not ceased since it began about June 10.

Highgate, Ont., Can., Aug. 12. F. W. BEATON.

LOGICAL.

"Ma, do cows and bees go to heaven?"
"Mercy, child, what a question! Why?"
"Cause if they don't, the milk and honey the preacher said was up there must be all canned stuff."

HUSTLERS, INDEED.

Canvassers—Bright, hustling young men to take orders for pure honey direct from the bees.—*Daily News.*

CLEANINGS IN BEE CULTURE FOR 1914

The Magazine for the Beginner, Back-lotter, and Specialist Beekeeper

For several years we have been doing our best to make GLEANINGS an indispensable publication for the wide-awake beekeeper whether he has but one colony, a small suburban apiary, or a series of out-apiaries numbering hundreds of colonies in all. We believe we have never received such enthusiastic approval of our efforts as we received in 1913 when hundreds of letters from our friends told of their appreciation. We wish that we might print a number of them here, but we prefer to utilize the rest of the space for outlining our plans for 1914.

For 1914 we shall continue the special numbers, the feature which has so delighted our readers during the last three years. In deciding just what subjects to take up, we have not selected topics at random, for we have been guided by the expressions of the majority.

JANUARY 1—BEES AND POULTRY.

—We think we are safe in saying that no special number that we ever published proved so popular as our February 15th issue for 1912. In getting out another special number devoted to the interests of poultry-raising and beekeeping, we propose to surpass our former efforts and to get together the best material possible on poultry-raising from the beekeepers' standpoint.

FEBRUARY 1—BEES AND FRUIT.—

Our March 15th issue for 1912 has been used far and wide by beekeepers and fruit-growers alike to show the value of bees in large orchards. In the two years that have elapsed, however, so much new material has developed that in order to be entirely up to date it is really necessary to have another special number on the same subject. We have a wealth of material that has never before been given to the public. Extensive fruit-growers who are not especially interested in *honey*-production will tell of the value of bees in orchards.

MARCH 1—BEEKEEPING IN CITIES.—

Probably few beekeepers realize the number of beekeepers there are in every large city. City beekeeping is a most interesting topic, and in addition to stories of beekeeping told by professional men we shall have discussed various problems connected with bees in attics, on roofs, and in back lots. We also have a *true* story of a beekeeper in a city who was fined \$100.00 because his bees were considered a nuisance, and who afterward appealed to a higher court and won out. Good story.

APRIL 1—BREEDING.—Ever since we first began having special numbers there have been requests on the part of a good many of our readers for a special number on breeding. We are glad that we are able to arrange for it this year, for it is a fact that very little is known in regard to breeding bees. Breeding is one of the most important subjects connected with our pursuit.

We shall publish special articles by noted queen-breeders on qualifications of breeding queens. Queen-rearing both for the small beekeeper and the specialist will be fully discussed.

JUNE 1—MOVING BEES.—We ourselves expect to move three hundred colonies of bees to Florida, get a good honey crop, double the number of colonies, and move them back again in the spring. Details of moving by boat, wagon, auto-truck, and by rail will be fully described and illustrated, and other large beekeepers having experience along this line have also promised articles for this number.

AUGUST 1—CROP AND MARKET REPORTS.—

There has never yet been a systematic effort put forth for the compiling and publishing of comprehensive crop and market reports from various parts of the country. In 1914 we are going to make the effort of our lives to get telegraph reports from important fields, such as the clover-belt, Texas, Colorado, Idaho, and California, etc. These will be published right along as soon as we can get them, but in this August 1st issue we shall have a grand summary of the crop reports and conditions of the market in general. No beekeeper should miss this important number.

SEPTEMBER 1—WINTERING.—We have not learned all there is to be learned in regard to wintering. A number of specialists are going to make experiments during the winter of 1913-14, which experiments will be published in this number. We shall also give our own experience summed up as to the feasibility of wintering northern apiaries in the South.

IS NOT ALL THIS WORTH WHILE?

We have now given you our plan for 1914. If you are trying to make the most out of your bees we feel sure you can not afford to miss such a wealth of information as the subscription price, \$1.00, will bring you.

See Special Notices, page 18.

**"If Goods are wanted Quick,
send to Pouder."**

Bee Supplies!

A bounteous crop of finest quality honey has been secured, and, resulting from the needs of beekeepers in supplies, I have experienced the busiest season that I have ever known. The demand for the Root Goods has been excessive, and I have been very fortunate in keeping my stock complete and filling orders promptly. To do this my helpers and myself were required to apply ourselves from fifteen to eighteen hours per day. We were, of course, glad enough to do this, but I am going to offer some attractive discounts for supplies to be used next year if ordered early, and this will reduce the task of having so much to look after at the busy season. I believe the discounts will be a mutual benefit to all concerned. I am always glad to quote lowest estimates on any list of goods.

A feature on which I am now specializing is sending goods by parcel post. If you are within 150 miles of Indianapolis I can have your goods delivered to your home at a very moderate cost, if the package doesn't weigh over 20 pounds.

MONONGAHELA, PA.

Walter S. Pouder, Indianapolis.

Dear Sir:—Comb honey arrived in excellent condition, and I am highly pleased with quality of the honey. I will say a good word about your business, and I appreciate your promptness and careful methods.

Yours,

EDWARD MAYHUGH.

Frequently a delay in delivering goods means a heavy loss to the beekeeper. If you are in need of more sections, foundation, shipping-cases, paper honey-jars, glass jars, or any thing required about the bees, I believe I can make it to your advantage to write me. My catalog mailed free to any address; but if more convenient you may use the Root catalog in ordering, prices being the same.

I am in need of more beeswax, and should be glad to have you send your wax here on a cash or trade basis, and you will find me prompt with returns.

Walter S. Pouder, Indianapolis, Ind.

WORK YOUR OUTYARDS

BY THE DOOLITTLE PLAN

His methods are fully explained in the fourth edition of

THE MANAGEMENT OF OUT-APIARIES

This is a revised edition of "A Year's Work in an Out-Apiary," containing the latest ideas of the author, Mr. G. M. Doolittle, of New York, telling how he has employed them and secured during a poor season an average yield of 114½ lbs. per colony. The 1913 edition is ready for mailing. Price 50 cents postpaid.

Order now of the publishers

THE A. I. ROOT CO., MEDINA, OHIO.

Special Sale of Honey

WE HAVE produced a fine lot of extracted honey this season from our eight out-yards. In addition to our own honey, we have purchased many other lots from prominent producers, and are now able to offer for prompt shipment the following flavors of extracted honey:

ALFALFA,	PALMETTO,
SWEET CLOVER,	ORANGE,
WHITE CLOVER,	LIGHT AMBER,
ALSIKE CLOVER,	DARK AMBER,
BASSWOOD,	BUCKWHEAT.

We have some very fine lots of Ohio, Michigan, and Wisconsin WHITE-CLOVER COMB HONEY. For those who have not secured a good crop, and are wanting some fine lots for their trade, we can furnish them any desired quantity.

Write for our special prices.

Inventory Season is Here

I have completed my inventory of Root's Bee Supplies on hand at my Syracuse warehouse, and my stock orders for 1914 goods has been sent to the factory at Medina, Ohio. If any customer or any beekeeper of New York State desires special goods I shall be pleased to send in the order to come with one of my cars to Syracuse.

I take this opportunity to thank my customers for their liberal patronage the past season, and solicit a continuance of the same.

Detroit Kerosene Engine

Saves Time, Trouble, Expense

The Detroit Kerosene Engine is the simplest and most powerful engine you ever saw or heard of. Direct transmission of power with 3 moving parts only—no useless cams, gears or valves to take up power or get out of order. No trouble—no extra expense. Starts without cranking.

Runs on Cheap Kerosene

Will run on distillate and gasoline; but kerosene costs less than half as much as gasoline. Besides, kerosene contains more heat units than gasoline. Result—more power—steadier power—at one-half the expense of fuel. Comes to you all ready to run feed grinders, separators, pumps, saws, electric light plants, etc. All sizes in stock ready to ship.

GUARANTEED 5 YEARS—Sent on trial direct from our factory at lowest factory prices. Don't buy an engine until you have seen the "Detroit." Write today for catalog and agent's special introductory price on first order from your territory. (189)

Free Book Tells How

SOME REASONABLE SUGGESTIONS.

Bee-escapes,
Honey-extractors,
Uncapping-knives,
Shipping-cases,
Glass Jars,
Honey Labels,
Vells, Smokers,

Bee-brushes,
Wax-presses,
Hive-tools,
Tin Cans,
Cartons,
Bee Books,
Gloves.

You are doubtless in need of and ready to order one or more of these items. You want **ROOT QUALITY** and **PEIRCE SERVICE** of course. Why not include with this order the hives, supers, sections, foundation, etc., you will need for next season? Prices are lower now than they will be in the spring. Then it will be a great satisfaction to have every thing ready for immediate use when needed, and so be immune from the vexation and loss that may result from unavoidable delays during the rush season.

The flooded stock is pretty nearly closed out. A few odds and ends remain. If you can use any slightly damaged goods at very low prices, write for list.

Look the catalog over and make up your order now. Do not hesitate to order even any small article needed, as the lower parcel-post rates now in effect insure delivery at trifling expense.

This Washer Must Pay for Itself

A MAN tried to sell me a horse once. He said it was a fine horse, and had nothing the matter with it. I wanted a fine horse. But I didn't know any thing about horses much. And I didn't know the man very well either.

So I told him I wanted to try the horse for a month. He said "All right, but pay me first, and I'll give you back your money if the horse isn't all right."

Well, I didn't like that. I was afraid the horse wasn't "all right," and that I might have to whistle for my money if I once parted with it. So I didn't buy the horse although I wanted it badly. Now this set me thinking.

You see I make Washing Machines—the "1900 Gravity" Washer.

And I said to myself, lots of people may think about my Washing Machine as I thought about

the horse, and about the man who owned it.

But I'd never know, because they wouldn't write and tell me. You see I sell my Washing Machines by mail. I have sold over half a million that way.

So, thought I, it is only fair enough to let people try my Washing Machines for a month, before they pay for them, just as I wanted to try the horse.

Now, I know what our "1900 Gravity" Washer will do. I know it will wash the clothes, without wearing or tearing them, in less than half the time they can be washed by hand or by any other machine.

I know it will wash a tub full of very dirty clothes in Six Minutes. I know no other machine ever invented can do that, without wearing out the clothes.

Our "1900 Gravity" Washer does the work so easy that a child can run it almost as well as a strong woman, and it doesn't wear the clothes, fray the edges, nor break buttons the way all other machines do.

It just drives soapy water clear through the fibers of the clothes like a force pump night.

So, said I to myself, I will do with my "1900 Gravity" Washer what I wanted the man to do with the horse. Only I won't wait for people to ask me. I'll offer first, and I'll make good the offer every time.

Let me send you a "1900 Gravity" Washer on a month's free trial. I'll pay the freight out of my own pocket, and if you don't want the machine after you've used it a month, I'll take it back and pay the freight too. Surely that is fair enough, isn't it?

Doesn't it prove that the "1900 Gravity" Washer must be all that I say it is?

And you can pay me out of what it saves for you. It will save its whole cost in a few months, in wear and tear on the clothes alone. And then it will save 50 cents to 75 cents a week over that in washwoman's wages. If you keep the machine after the month's trial, I'll let you pay for it out of what it saves you. If it saves you 60 cents a week, send me 50 cents a week till paid for. I'll take that cheerfully, and I'll wait for my money until the machine itself earns the balance.

Drop me a line to-day, and let me send you a book about the "1900 Gravity" Washer that washes clothes in six minutes.

Address me this way—H. L. Barker, 1127 Court Street, Binghamton, N. Y. If you live in Canada, address 1900 Washer Co., 355 Yonge St., Toronto, Ontario.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER.

GLEANINGS' BINDERS.

In order to close out our present stock of GLEANINGS binders we are making the following special rates:

Style C, 50 cts. postpaid. (This is a neat binder in art canvas cover of red.)

Style D, 75 cts. postpaid. (This binder is half leather, and is black.)

These binders are arranged to hold the issues of GLEANINGS temporarily as received from month to month. Each binder will hold about twenty numbers of GLEANINGS (more if crowded). Each copy can be inserted easily and securely as soon as received, thus making a convenient volume for reference. The binders are neatly lettered "GLEANINGS IN BEE CULTURE." These binders represent a bargain at this price, and we trust that our readers whose numbers of GLEANINGS are scattered around loosely will avail themselves of this opportunity to secure a good binder at a reduced rate.

GLEANINGS IN BEE CULTURE FOR 1914.

On page 7 of this issue we have taken you into our confidence, and have told you some of the plans which the Editorial Department has made in the way of seven special numbers of GLEANINGS IN BEE CULTURE for 1914—that feature which has been so popular during the past three seasons. These numbers will be better than ever before, and ought to be an inspiration to every beekeeper.

So many of our readers prefer to subscribe for more than a year at a time that we wish to mention our special rates of \$1.50 for GLEANINGS for two years; \$2.00 for three years, and \$3.00 for five years. (Canadian postage 30 cts. a year additional; foreign postage 60 cts. a year additional.)

Those who are interested in combination offers including other publications should turn to inside cover page of this number, for our 1914 CLUB-BING LIST. Special rates quoted upon request on combinations not listed. Our new subscription catalog of combination offers will soon be published. Send for a copy.

SECOND-HAND FOUNDATION MILLS.

We have to offer the following list of foundation machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0139, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0142, 2½ x 6 hexagonal thin-super mill, in fair shape. Price \$10.00.

No. 0153, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0154, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0156, 2½ x 6 extra-thin-super mill, fair. Price \$10.00.

No. 0157, 2½ x 6 thin-super mill, in good condition. Price \$12.00.

No. 0160, 2½ x 6 hexagonal thin-super mill, in good condition. Price \$12.00.

No. 0165, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0167, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0176, 2½ x 6 extra-thin-super mill in fair condition. Price \$12.00.

No. 0180, 2½ x 6 hexagonal thin-super mill, in fair condition. Price \$10.00.

No. 0183, 2½ x 6 hexagonal thin-super mill, very good condition. Price \$14.00.

No. 0187, 2 x 10 round-cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0188, 2 x 10 round-cell medium-brood mill, in good condition. Price \$14.00.

No. 0191, 2 x 10 round-cell Pelham mill in good condition for this kind of mill. The bases of the cells are not natural shape, but the walls are regular. Price \$7.00. Sample mailed free if interested.

No. 0182, 2½ x 12 round-cell medium-brood mill in very good condition. Price \$20.00.

No. 0186, 2½ x 10 hexagonal cell medium-brood mill in good condition. Price \$20.00.

No. 0206 2½ x 10 hexagonal cell heavy brood Dunham mill in good condition. Price \$15.00.

No. 0207, 2½ x 6 hexagonal cell thin-super Dunham mill in good condition. Price \$10.00.

SPECIAL NOTICES

A. I. ROOT

DEATH OF E. C. GREEN.

I am pained to record the sudden and unexpected death of my old friend and neighbor E. C. Green, whose letter in regard to the dasheen appeared only in our last issue. An operation for gall-stones became necessary, and he failed rapidly soon afterward, his death occurring the last day of October.

Mr. Green, as our readers know, was a prominent horticulturist, his work on the tomato, especially, having been noted in these columns. Although a busy man, he always had time for his church. He rarely missed prayer-meeting, and he constantly gave of his time and strength for the upbuilding of the kingdom of God.

THE DASHEEN TUBERS TO BE SENT TO OUR SUBSCRIBERS.

Quite a few of the friends, especially a few living in climates where there is little or no winter, seem to have the impression that dasheen tubers can be mailed at once; and I suppose they could; but they are now so green and heavy on account of the moisture contained in them that it would probably take double the postage if sent before they are thoroughly dry. These grew from tubers we received from the Government last January. I hardly think we shall be ready to mail the tubers before January 1. Perhaps on my visit to Brooksville on the way to our Florida home I shall be able to find out more about it. Another thing, if sent before they are thoroughly dried out they will be liable to be injured by frost while in transit. Of course, these premium tubers will be sent by mail.

Convention Notices

The annual meeting of the New York State Association of Beekeepers' Societies will be held in Rochester Dec. 2 and 3, 1913.

Rochester, N. Y., Oct. 27. R. J. RULIFFSON.

The Indiana State Beekeepers' Association will hold its next annual session at the Statehouse, Indianapolis, Dec. 3. Live topics will be discussed. All are invited.

Redkey, Ind. GEO. W. WILLIAMS, Sec.

The California State Beekeepers' Association will hold its annual convention at the Y. M. C. A., Los Angeles, Cal., Dec. 9, 10, 11. I can not give you complete program at present, but it will consist of live topics—topics not only interesting but very important—in fact, concerning the vitals of our industry.

Dec. 9, 1:30 P. M., meeting of the Directors of the Consolidated Honey-producers of California (an incorporation belonging to the Association). At 2:30 P. M. there will be a meeting of the executive committee and advisory committee (which consists of the Presidents and Secretaries of the county clubs and local organizations), and will continue the 10th and 11th.

Newhall, Cal., Oct. 21. J. W. FERREE.

The annual convention of the Ontario Beekeepers' Association will be held at Toronto, in Victoria hall, Queen Street East, on November 19, 20, and 21, 1913. The program is as follows:

TUESDAY—7:30 P. M.

Meeting of officers and directors.

WEDNESDAY—9:30 A. M.

Minutes—Morley Pettit, Guelph, Secretary. President's address—Denis Nolan, Newton Robinson, Ont. First vice-president's reply—J. L. Byer, Mt. Joy, Ont. Second vice-president's reply—Miss Ethel Robson, Denfield, Rt. 1, Ont. Co-operation within

the county associations. Brief reports by county secretaries—Alex. Dickson, Glengarry Co., Blake Millar, Elgin Co.; R. C. Fretz, Lambton Co. All other county secretaries are expected to join in the discussion. Provincial co-operation started—brief report by secretary. A special meeting of those interested in co-operation will be held in the evening.

WEDNESDAY—2:00 P.M.

The office of director; what does it mean?—R. E. L. Harkness, Irena. The swarming problem—H. G. Sibbald, Claude, Ont. Question-box—D. Donaldson, Carleton Place, Ont.

THURSDAY—9:30 A.M.

Queen-rearing—John A. McKinnon, St. Eugene. The Association organ—Report by executive committee. Question-box—Jas. Armstrong, Cheapside, Ont.

THURSDAY—2:00 P.M.

Address—E. R. Root, Medina, Ohio. Address—Dr. G. C. Creelman, LL.D., president O. A. College, Guelph, Ont. Election of officers. Reports—secretary, treasurer, directors, committees, representatives to exhibitions, judges of honey.

FRIDAY—9:30 A.M.

The question of transportation—Geo. F. Kingsmill, O. A. C., Guelph, Ont. Notes from the year's work—Morley Pettit, provincial apiarist. Question-box—Chas. Blake, Snow Road, Ont.

FRIDAY—2:00 P.M.

Comb-honey production and marketing—Morley Pettit, Guelph, Ont. Extracted-honey production—John A. Lunn, Fingal, Ont. Unfinished business.

The following is the program of the annual meeting of the Minnesota Beekeepers' Association to be held at the mayor's reception room, court house, Minneapolis, Dec. 3 and 4:

WEDNESDAY FORENOON.

- 9:00—Hour for getting acquainted and "seeing the Treasurer."
- 10:00—President's Address.
- 10:30—"How My Bees Produced Thirty Tons of Honey this Season," E. L. Hofmann, Janesville.
- 11:30—"Sweet Clover as a Honey-producer," R. F. Hall, New Auburn.

WEDNESDAY AFTERNOON.

- 1:30—"Carniolans versus Italians," Rev. Francis Jager, St. Bonifacius.
- 2:30—"The Honey-producing Plants," Prof. Edw. J. Freeman, of the State Farm School.
- 3:30—Question-box.

WEDNESDAY EVENING.

- 8:00—Popular Program, Rev. Francis Jager in charge. Short talks on topics of interest to the general public.

THURSDAY FORENOON.

- 9:00—"Wintering Bees," Dr. L. D. Leonard, Minneapolis.
- 10:00—"Why We Use Smoke on Bees," Hamlin V. Poore, Bird Island.
- 11:00—Suggestion in regard to organizing a honey exchange, L. F. Sampson, Excelsior.

THURSDAY AFTERNOON.

- 1:30—Report on State Fair, Scott LaMont, Park Rapids, Superintendent of Apiary Department.
- 2:00—Report of the Inspector of Apiaries, J. A. Holmberg, St. Paul.
- 2:30—Business session—election of officers.

Mr. Beekeeper, if you are a small beekeeper, with only a limited knowledge of beekeeping, why not come to this meeting and hear those who know more than you explain their methods? There are beemen in Minnesota to-day who are enjoying a tremendous increase in their honey production by simply putting in practice suggestions caught at our annual meetings.

Or if you are a big beekeeper, why not mingle here with other big ones, compare notes, give and take pointers, and promote the interests of the organization so largely instrumental in securing the excellent laws favoring our Minnesota beekeepers?

PROPOSED AMENDMENT.

Attention of members is called to the following proposed addition to Article 3 of the Constitution relating to membership:

"Any person entitled to membership in this association shall automatically become a life member of the association on the payment of one dollar per year for ten consecutive years; or upon the payment of a

balance sufficient to make the sum of ten dollars at any time during the ten years, or upon the payment of ten dollars in a lump sum at any time."

C. A. PALMER, Sec.

The second annual convention of the Iowa Beekeepers' Association will be held at Des Moines, Ia., December 10, 11, 12, 1913. The following is the program:

WEDNESDAY, DECEMBER 10, 10 A. M.

Address by President, Frank C. Pellet, Atlantic; report of Secretary, S. W. Snyder, Center Point; report of Treasurer, C. H. True, Edgewood; reports of standing committees; appointment of committees.

1:00 P. M.

Some side lines on the farm, J. W. Jarnagin, Des Moines. Marketing the crop, W. P. Southworth, Sioux City. Beekeeping as a business, B. A. Aldrich, Smithland. Selling direct to the consumer, J. L. Strong, Clarinda. Ladies' informal meeting in separate room in charge of Miss Nina Secor, Forest City.

8:00 P. M.

Beekeeping in Europe, C. P. Dadant, Hamilton, Illinois.

THURSDAY, DECEMBER 11, 9 A. M.

Election of officers; arrangement of apiary, C. H. True, Edgewood. Sweet clover: what it will do for the farmers and beekeepers of Iowa, by Frank Coverdale, Delmar. This address alone will be well worth the time and expense of a journey across the State to every beekeeper, especially those combining beekeeping with other branches of agriculture.

1:00 P. M.

Beekeeping as a side line, and the fun of the thing, Hamlin B. Miller, Marshalltown; Modern methods of caring for extracted honey, E. R. Root, Medina, Ohio. Mr. Root's address will be followed by a demonstration of capping-melter, power extractor, and other machinery for the large producer, by Mr. Root and Mr. F. C. Scranton, of Des Moines.

8:00 P. M.

How may we increase the consumption of honey? Eugene Secor, Forest City. Increase, J. W. Bittenbender, Knoxville. Advertising, Dr. A. F. Bonney, Buck Grove. Comb or extracted honey, C. L. Pinney, LeMars.

FRIDAY, DECEMBER 12, 9 A. M.

Beekeepers' legal status, Russell E. Ostrus, Attorney for Iowa Beekeepers' Association, Des Moines. Treatment of disease, Edward G. Brown, Sergeant Bluff. Helps and hindrances in dealing with foul brood, J. W. Stine, Salem.

1:00 P. M.

Address, Prof. W. J. Kennedy, Ames. A season's work, E. W. Hall, Colo. Exhibits, R. H. Longworth, Polk City. Every member is invited to bring samples of his best product, and to come prepared to demonstrate any new method of interest.

INDIANA WILL OBSERVE HONEY DAY, DECEMBER 15.

George W. Williams, of this city, secretary of the Indiana Beekeepers' Association, has issued the announcement that Monday, Dec. 15, has been designated in Indiana as "Honey Day." Each person is asked to observe this day eating a little Indiana honey.

The busy little bee and the modest, unassuming clover, have given to Indiana and her sister States of the clover belt a bountiful crop of the most luscious and wholesome sweet. The present crop is said to be more delicious and appetizing than usual. Nowhere in the wide world can be found any thing that will compare with the present crop of Indiana clover honey.

Nor is the delicious honey the only gift these modest little workers bring to us. Every berry, apple, peach, plum, cherry, tomato, cucumber—in fact, almost all our fruits and vegetables—owe their pollination to the visit of some bee or other honey-gathering insect. Every pound of butter, milk, beef, or mutton is debtor to the bee for the delicate white-clover flavor, and there could be no white-clover pasture without bees to fertilize the blossoms.

In view of the many material benefits that the little toiler brings to us, it is eminently fitting that we pause for a moment and offer a modest tribute to this faithful ally and benefactor, and thus pay a debt of gratitude we owe. In so doing let us regale ourselves with a feast of honey, such as the ancient Greeks offered as fitting for the lips of the gods of Mount Olympus.—*Redkey Times*.

EARLY-ORDER CASH DISCOUNTS

Apply Here just as they
do at the Factory

As Southwestern distributors of **ROOT'S BEEKEEPERS' SUPPLIES**, we are very glad to make this first announcement of a special discount for early orders, accompanied by cash, to our beekeeping friends throughout this territory.

We give exactly the same discount that is granted by the manufacturers of these famous goods, and the prices in our special catalog are the same as their own. There is an extra saving for you in ordering from us—**FREIGHT**. Better give this your special attention before ordering from elsewhere.

THE CASH DISCOUNT ON EARLY ORDERS PLACED IN NOVEMBER IS 5 PER CENT.

This applies to every thing in the way of beekeepers' supplies except a few special articles. On large general orders we will allow the discount on some of the excepted articles, not exceeding ten to twenty per cent of the entire order.

REMEMBER WE MANUFACTURE THE FAMOUS WEED PROCESS COMB FOUNDATION.

We have a large demand for this product, and are turning out comb foundation of the finest quality. Include what you will need for the opening of next season in your early order. Shipment may be held subject to your convenience if desired; but get your order in now and save 5 per cent.

Wintering Bees

This is the title of a newly revised book by E. R. Root, going into full details on

Construction of Double-walled Hives

and in general

How to Winter Bees Outdoors

It will save many times its cost in one winter. . Price 10c.

Published by

The A. I. Root Co., Medina, Ohio

HOW FAR CAN A BEE SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think!

The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . It teaches people to see the wonders and beauties of nature.

\$1.00 per year. 10c a single copy.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION,
DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and en-

tirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces or more, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened, weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy and No. 1 white comb, 16 to 17; white extracted, 10 to 11. Beeswax, 30. There is an active demand for white comb honey.

Boston, Nov. 17.

BLAKE-LEE CO.

INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cts. in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cts. in cash or trade.

Indianapolis, Nov. 17.

WALTER S. POWDER.

CINCINNATI.—The demand for honey is good. We sell fine table honey in 60-lb. cans from 8 to 10 cts., according to the quality and quantity; amber honey in barrels, from 5½ to 8. Comb honey, for the very fanciest we are getting from \$3.75 to \$4.00 a case. For choice bright yellow beeswax we are paying 30 cts. per lb. delivered here.

Cincinnati, Nov. 19. THE FRED W. MUTH CO.

CHICAGO.—Sales in the aggregate have been fair during the past month, but the supply is quite heavy and prices are weak. It is difficult to obtain more than 15 to 16 for the A No. 1 to fancy grades, and lower grades are more or less neglected, prices ranging from 1 to 5 cts. per lb. less according to kind, condition, and color. Consignments have not sold readily, owing to these conditions. Extracted is also freely offered with prices of the best grades of white ranging from 8 to 9, and ambers from 7 to 8, with the undesirable flavors difficult to market. Beeswax is steady, and sells upon arrival at from 30 to 32, according to color and cleanliness.

Chicago, Nov. 18.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Early-order discount this month is 4 per cent.

Honey reports continued from page 2.

IDAHO FALLS.—Comb honey is sold out. We quote fancy white extracted in 60-lb. square tins at 7.

IDAHO HONEY-PRODUCERS' ASSOCIATION,
F. C. BOWMAN, Sec.

Idaho Falls, Ida., Nov. 17.

KANSAS CITY.—Receipts of comb honey are large; demand fair. Receipts of extracted are not large; demand is good. We quote No. 1 white comb, 24 sections per case, \$2.75; No. 2 ditto, \$2.50. There is a limited demand for light amber at the price of white. White extracted, per pound, 8 to 8½; amber ditto, 7 to 8; No. 1 beeswax, 30; No. 2, 25.

C. C. CLEMONS PRODUCE CO.

Kansas City, Mo., Nov. 10.

BUFFALO.—The demand for honey has improved somewhat; not nearly as good as it ought to be. This is due to the fact that there are so many people buying direct from the country. No. 1 to fancy white comb honey, 16 to 17; No. 2 ditto, 14 to 15; buckwheat ditto, 13 to 14; white extracted, 8½ to 9; dark extracted, 6½ to 7½; beeswax, 28 to 30. Receipts of comb not heavy.

Buffalo, N. Y., Nov. 18. W. C. TOWNSEND.

ZANESVILLE.—The present demand for honey is at least normal, and the market firm. For fancy and No. 1 white comb, prices run 17 to 18 in a jobbing way, with a little shading on western honey. There is not much sale on off grades here. Best quality white extracted brings 9 to 11, according to quantity. Producers are paid for beeswax 30 cash, 32 in exchange for honey or supplies.

Zanesville, Nov. 21. E. W. PEIRCE.

DENVER.—Our local market is well supplied with honey, and our jobbing quotations are as follows: Strictly No. 1 white, per case of 24 sections, \$2.70; choice, \$2.57; No. 2, \$2.43; extracted white, 8 to 9 cts.; light amber, 7 to 7½. We are in the market for beeswax, and pay 30 cts. per lb. in cash, and 32 in trade, delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION,
Denver, Nov. 20. FRANK RAUCHFUSS, Mgr.

KANSAS CITY.—Receipts of comb honey are large; demand fair. Receipts of extracted honey are not large; demand good. We quote No. 1 white comb, 24-section case, \$2.75; No. 2 ditto, \$2.50. There is a limited demand for light-amber at the same price as white. White extracted, per lb., brings 8 to 8½; amber ditto, 7 to 8; No. 1 beeswax, per lb. 30; No. 2, 25.

C. C. CLEMONS PRODUCE CO.

Kansas City, Nov. 10.

SCHENECTADY.—The advice given honey producers to dispose of their crop early, while demand was brisk, by the editor of GLEANINGS, was sound. The market is now dull, and those who have held for higher prices, or delayed getting their honey in condition to sell, are up against a slow demand, excepting fancy white, which is scarce. We quote No. 1 white clover at 15 to 16; mixed grades, 12 to 13; buckwheat, 12 to 13; extracted, light, 9 to 9½; dark, 7½ to 8.

CHARLES MACCULLOCH.

Schenectady, N. Y., Nov. 19.

NEW YORK.—The market condition of comb honey remains the same, and we quote fancy white at 16; No. 1, 14 to 15; No. 2, 13; mixed and buckwheat, 10 to 11, according to quality. On account of the somewhat short crop in the Eastern States, a few cars of western comb honey have been sent into our market; and this, in connection with the nearby crop, is sufficient supply to meet demands. Extracted honey remains about the same. There is a fair demand for white clover, which is selling at from 8½ to 9; amber to light, 7½ to 8; buckwheat, 7 to 7½; southern honey, in barrels, is selling at from 60 to 75 cts. per gallon, according to quality, with plenty of supplies. Beeswax is steady at from 31 to 32.

New York, Nov. 19. HILDRETH & SEGELKEN.

THE USE OF HONEY IN COOKING

The 1913 edition is ready for distribution, and may be had in quantities at reasonable rates. The back-cover page affords space for a display advertisement. As this booklet contains no advertising whatever, it can be employed with telling effect. Better order your supply early. Sample and prices in quantities on application. Fifty-eight pages; one hundred and twenty-two valuable recipes in which honey is used. Just the book for every household. A two-cent stamp will bring a copy.

Add-ess the Publishers

THE A. I. ROOT COMPANY, MEDINA, OHIO

ST. LOUIS.—The demand for comb honey is very good, especially for fancy white stock, and our market is well supplied in almost every grade. We are quoting to-day, in a jobbing way, fancy white comb honey at 15 cts. per lb., No. 1 at 14; light amber at 11 to 12; dark amber at 9 to 10. By the case, fancy white comb honey, \$3.00 to \$3.25; No. 1, \$2.50 to \$2.75; light amber, \$2.25 to \$2.40; dark amber, \$1.75 to \$2.00. Light-amber extracted honey, in barrels and half-barrels, 6½ to 6¾; in five-gallon cans, at 7½ cts; dark honey according to quality. Beeswax is in good demand at 32 for prime. Inferior and impure sells for less.

**An Opportunity to Make an Independent
Living from a small cultivated area in
“The Land of Manatee”
On the Gulf Coast of Southern Florida**

All the early vegetables, marketed at highest prices, are successfully grown—3 and 4 different crops per annum. A home in a delightful year-round climate. A young man paid \$125 for an acre of land this year, and spent another \$125 in clearing and cultivating it in tomatoes. The production was 550 baskets, which were sold at \$2.50 per basket; total gross production from a single crop on an acre of ground, \$1375. The same advantages and opportunities are open to you. Let us tell you in detail of the possibilities in this favored section. Ask for beautiful illustrated book, “Fruit and Vegetable Growing in Manatee County.”

The BEEKEEPERS’ REVIEW

would like very much to enroll a goodly number of new subscribers for the year 1914. Listen! Besides the 3000-colony series managed from one office, we will begin with the January number of the REVIEW a series of articles by a beekeeper “gray with experience” that we will call the Farmers’ Series; or, How to Produce Comb Honey with Two Visits a Year. The editor of the REVIEW has looked into this system quite thoroughly, and believes that, with this method that will be described in the REVIEW during 1914, the busy man or farmer can harvest much more comb honey per colony, with about a fourth the work that is required with the ordinary system now in vogue. We are printing 400 extra sets of the REVIEW for the last half of 1913; and as long as they last they will be included free to all new paid-in-advance subscribers for 1914. All progressive beekeepers should subscribe for two or three good bee journals. We are making a special low price on the REVIEW when clubbed with other bee journals.

To take advantage of this low price, all remittances should be addressed—

Here is a	{ GLEANINGS, one year, \$1.00 }	} Both, one year, for \$1.50.
good one:	{ The REVIEW, one year, \$1.00 }	
Here	{ GLEANINGS, one year, \$1.00 }	} All Three for \$2.00.
is an-	{ AMER. BEE JOURNAL, 1 yr., \$1.00 }	
other:	{ The REVIEW, one year, \$1.00 }	

THE BEEKEEPERS’ REVIEW, NORTHSTAR, MICHIGAN

- 1 1914 Triplicate Calendar.
- 4 Double Holiday Booklets, each in an envelope.
- 1 Large Folding Christmas Letter, enclosed in a fine white envelope, ready to mail.
- 6 Holiday Post Cards, Christmas and New Year's.
- 12 Enclosure Cards and Tags, all different designs.
- 12 Larger Enclosure Tags and Cards.
- 5 Beautiful Enclosure Cards, largest size.
- 253 Pieces in all.

Send your order early before the supply is exhausted.

The A. I. Root Co., Medina, Ohio

"If goods are wanted quick, send to Pouder."

BEE SUPPLIES

This advertising business is an interesting subject, and I have given it hard study for just twenty-five years. An expert advertising man of this city, Mr. Carl D. Spencer, has this to say in one of his announcements: "In September I canvassed over two hundred homes and asked questions. I learned this: That practically everybody reads advertisements; that nearly everybody doubts the truth of advertisements generally; that most people do not separate the true from the false, but discount what is said in all or nearly all of them; that almost every one has been tricked into spending money through false or misleading advertisements. They blame the business man and not the magazines because false advertising is permitted, and every one desires a means by which she or he may recognize a truthful advertisement."

The above interested me greatly, and I have been trying for a solution as to how to have my advertising identified as the genuine article. I have never overrated my class of goods. In bee supplies I simply say that the goods which I handle are the Root make, and that speaks volumes. I receive hundreds of testimonials from those who have dealt here, and these same friends are recommending my goods to their neighbors. In shipping large orders of bee supplies, there is a declining scale of prices on quantity lots, and I save this for my patrons, often unexpectedly to them, but gratefully received as a rebate. Frequently neighbors club together and secure their supplies in one shipment, thus creating a saving in the aggregate cost as well as in transportation charges. I should like to place my catalog of supplies in your hands, which shows the new schedule of prices, and gives list of discounts offered for early orders. I also include with each catalog a letter which I should like to have you read.

Just now I am advertising finest extracted honey by parcel post. I am mailing tight-seal cans containing four quarts, two quarts, and one quart, and also paper honey-jars filled with granulated honey. With these paper honey-jars one can peel off the waxed paper and leave a beautiful cone of white granulated honey to serve on the table, and I assure you that this has never been equaled in any confection. This is strong language; but if you receive a sample you will admit that my advertisement is not overdrawn. I have mailed these goods to Chicago, Cincinnati, Louisville, and to many small towns, without a failure thus far. Perhaps some of you would like one of these packages mailed to some of your friends as a Christmas souvenir. Can you think of a nicer, sweeter token? If interested let me mail you my descriptive circular with price list. I will also include price list of honey to be shipped in larger quantities.

HONEY Bought Sold...

Central Ohio Honey Market

Finest quality WHITE-CLOVER honey a specialty. Producers who have not yet sold their crop should write. Those who have disposed of their crop and are in need of more for their trade, I shall be glad to supply at lowest prices consistent with highest quality and a fair margin of profit.

The correspondence of wholesale and retail dealers is especially solicited, as I am in position to furnish a grade of comb and extracted honey that will suit the most exacting trade. If interested, write for quotations and full description of the line.

Bee Supplies

Now is the best time to place your order for supplies for use next season. The prospect was never brighter, and there is every thing to gain and nothing to lose by ordering before the spring rush is on. Ask for revised price list and early-order discounts.

PAINT WITHOUT OIL

**Remarkable Discovery that
Cuts Down the Cost of Paint
Seventy-five Per Cent.**

**A Free Trial Package is Mailed to Every
One Who Writes.**

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

How to Keep Bees

BY ANNA BOTSFORD COMSTOCK

FOR SALE.—My bees and fixtures; no disease; lots of alfalfa. Will lease good five-room house, truck-patches, etc. Plenty of employment when not busy with bees. If interested, write me; but don't write unless you mean business. H. A. BUSHBY, Rydal, Republic Co., Kansas.

Fertile Virginia farms, small and large, on railroad, \$15 an acre up. Easy payments. Write for list. Send names of two friends interested in Virginia and receive our beautiful magazine one year free. F. H. LABAUME, Ag'l Bldg. Norfolk & Western Ry., Room 246, N. & W. Bldg., Roanoke, Va.

Alfalfa, Corn, and Hog Raising is a money-making combination, rapidly making Southeastern farmers rich. The South is the new "corn belt" and the natural realm of "king alfalfa." Act quick, land prices now extremely low; values rapidly advancing. Farm lists and "Southern Field" sent free. M. V. RICHARDS, Land and Industrial Agent, Southern Railway, Room 27, Washington, D. C.

BEEES AND QUEENS

FOR SALE.—50 to 200 colonies, eight-frame, first-class. E. F. ATWATER, Meridian, Idaho.

Pure Italian bees or their hybrids, in L. 10 frames, wired, full foundation, 1 or 100.
JOS. WALRATH, Antioch, Cal.

Phelps' Goldenes combine the qualities you want. They are great honey-gatherers, beautiful and gentle. Mated, \$1.00; tested, \$2.00 and \$3.00; breeders, \$5.00 and \$10.00. C. W. PHELPS & SON, 3 Wilcox St., Binghamton, N. Y.

FOR SALE.—Apiary of 100 colonies of bees in good condition; 75 extra hives, together with a complete set of implements, and every thing to work with; in a fine locality. For information write to R. S. SHELTON, New Smyrna, Fla.

FOR SALE.—Golden Italian queens that produce golden bees; for gentleness and honey-gathering they are equal to any. Every queen guaranteed. Price \$1.00; 6 for \$5.00.

WM. S. BARNETT, Barnett's, Va.

Golden Italian queens that produce golden bees, the brightest kind, gentle, and as good honey-gatherers as can be found. Each, \$1.00; six, \$5.00; tested, \$2.00; breeders, \$5.00 to \$10.00.
J. B. BROCKWELL, Malvern Hill, Va.

FOR SALE FOR CASH.—700 odd colonies of bees with complete outfit for running them for comb and extracted honey. Also about 4 acres of land 1½ miles from city; bee-house, horses, wagons, and a few supplies off the market Jan. 1. This outfit is located in the heart of the Mesilla Valley under the Elephant Butte project. HOPPER & MCBRIDE, Box 262, Las Cruces, N. M.

POULTRY

Rhode Island Reds. High grade stock for sale. Write me. E. O. WALTZ, Medina, Ohio.

FOR SALE.—Buff turkeys, \$5.00 per pair; \$7.00 per trio. J. L. SANSOM, Rt. 1, Aberdeen, Miss.

Indian Runner breeding-ducks laying now. Utility and exhibition stock (pure white eggs) sent on approval. DERBY TAYLOR, Box G, Lyons, N. Y.

Single-comb White Leghorns.—\$1.00 each; pullets and cockerels, yearlings and cocks; shipped anywhere. As many as desired. Write for catalog. WOODWORTH FARM, Wilton, Conn.

FOR SALE.—Indian Runner ducks. Stock bred from first-prize hen and first-prize drake, Ohio State Fair. Fine birds, and unequaled egg-producers. Guaranteed birds at reasonable prices. L. G. CARY, Trimble, Ohio.

Rhode Island Reds, Plymouth Rocks, White Leghorns, and White Wyandots, cockerels, hens, and pullets. Have your order booked now for eggs and baby-chicks for early delivery. Write for prices. CRYSTAL SPRINGS POULTRY YARDS, Boonville, Mo.

PIGEONS

Pigeons! Pigeons! Thousands, all breeds; lowest prices; satisfied customers everywhere. Start with our \$\$\$-making Jumbo Squab-breeders. Large, free, instructive, illustrated matter.

PROVIDENCE SQUAB CO., Providence, R. I.

MISCELLANEOUS

FOR SALE AT A BARGAIN.—Model 36, four-cylinder, sixty H. P. seven-passenger "Thomas Flyer." By removing the rear tonneau it can be made into a truck with extraordinary carrying capacity. E. C. GREER, 712 N. M. St., Mt. Vernon, Ohio.

Make money cutting ice with Orton & Lair's Ice-Cutting Machine. Four H. P. gasoline-engine and saws. Patents pending. 2118 cakes cut in 2 hours, 50 minutes, and sold floating for \$31.77. Carload cut in 12 minutes. Write for particulars. Price \$450.00. THE ORTON & LAIR PATENT ICE-CUTTING MACHINE CO., 45 Grand St., Gloversville, N. Y.

BEEKEEPERS' DIRECTORY

If you need queens by return mail send to J. W. K. SHAW & Co., Loreauville, Iberia Parish, La.

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Conn.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1913; beautiful, hustling, gentle workers. Send for price list. E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on common stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER.

SOUVENIR PHOTO-PRINT OF A. I. ROOT.

It has occurred to us that possibly there may be readers of GLEANINGS in BEE CULTURE who do not happen to have one of these photo-prints of Mr. Root, who would really like one. The picture is a reproduction of one of Mr. Root's latest pictures, and is an excellent likeness. The engraving for the print was done by one of the largest engraving houses in the United States. The print is an exact reproduction of a costly carbon photograph. Each picture bears a fac-simile of Mr. Root's autograph signature. As long as the supply lasts, we shall be pleased to send one of these prints, without charge, to any subscriber who desires one in connection with renewal for one year in advance at regular subscription rate of \$1.00. If the subscription happens to be paid for one or more years in advance, a picture will be sent upon request.

SECOND-HAND FOUNDATION MILLS.

We have to offer the following list of foundation machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0139, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0142, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in fair shape. Price \$10.00.

No. 0153, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0154, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0156, $2\frac{1}{2} \times 6$ extra-thin-super mill, fair. Price \$10.00.

No. 0157, $2\frac{1}{2} \times 6$ thin-super mill, in good condition. Price \$12.00.

No. 0160, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, in good condition. Price \$12.00.

No. 0165, $2\frac{1}{2} \times 6$ hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0167, $2\frac{1}{2} \times 6$ hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0176, $2\frac{1}{2} \times 6$ extra-thin-super mill in fair condition. Price \$12.00.

No. 0180, $2\frac{1}{2} \times 6$ hexagonal, thin-super mill, in fair condition. Price \$10.00.

No. 0183, $2\frac{1}{2} \times 6$ hexagonal thin-super mill, very good condition. Price \$14.00.

No. 0187, 2×10 round-cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0188, 2×10 round-cell medium-brood mill, in good condition. Price \$14.00.

No. 0191, 2×10 round-cell Pelham mill in good condition for this kind of mill. The bases of the cells are not natural shape, but the walls are regular. Price \$7.00. Sample mailed free if interested.

No. 0182, $2\frac{1}{2} \times 12$ round-cell medium-brood mill in very good condition. Price \$20.00.

No. 0186, $2\frac{1}{2} \times 10$ hexagonal cell medium-brood mill in good condition. Price \$20.00.

No. 0206, $2\frac{1}{2} \times 10$ hexagonal cell heavy brood Dunham mill in good condition. Price \$15.00.

No. 0207, $2\frac{1}{2} \times 6$ hexagonal cell thin-super Dunham mill in good condition. Price \$10.00.

No. 0210, 2×10 round-cell medium brood mill in extra-good condition. Price \$16.00.

No. 0211, $2\frac{1}{2} \times 10$ hexagonal cell medium-brood mill; rolls recut, and practically as good as a new machine. Price \$28.00.

No. 0212, $2\frac{1}{2} \times 10$ hexagonal medium-brood mill; rolls recut, and practically as good as a new mill. Price \$28.00.

SPECIAL NOTICES

A. I. ROOT

OUR MAGAZINES AND PERIODICALS OF THE PRESENT DAY, DEVOTED ESPECIALLY TO THE HOME.

A great many times I have been pained to see our home journals undertake to teach something that they know nothing about. May be we are all guilty

more or less; but I have oftentimes remarked that if an editor, when he tries to write up a certain subject, would consult an up-to-date expert, or, better still, get that expert to write it for him, there would be much less blundering in print. One man can not know *every thing*, and therefore some of our great family papers have three or four editors, and perhaps more. But even when they get out of their beat a little they should be sure they are up to date. The water-witching I have recently spoken about illustrates this; the influence of the moon on vegetation, etc.; also predicting the weather for months ahead. Some of our home journals permit articles to go into print that are full of superstition and nonsense, just because they do not consult the Weather Bureau or the experiment stations of their respective States.

Ever since I can remember, I have seen more or less of the *Youth's Companion*, and it has been my pleasure to see it grow; but of late years I have not been able to read it very much; but whenever I do, or whenever I see extracts from it, I am greatly pleased to find it year after year sound and sensible, and, I believe, as a rule it is orthodox on every thing pertaining to the home. Sometimes I have thought it would have a better effect on the young boys if there were not so many sensational stories, including hair-breadth escapes, etc. But perhaps it would not then be read so thoroughly by almost every boy, from beginning to end, were it not for these stories that even I at my age find it hard to drop when I once start in to give it only a hasty glance. In artistic skill it comes pretty near taking the lead among our home papers.

Convention Notices

The Fillmore Co. beekeepers' annual meeting will be held at Preston, Minn., on Dec. 11 and 12.
Harmony, Minn., Nov. 21. P. B. RAMER, Sec.

The Wisconsin State Beekeepers' Association will meet in annual convention at the Capitol building, Madison, Wis., Feb. 3 and 4, beginning at 10 A. M. Tuesday. Headquarters for beekeepers will be at Simons Hotel. We are preparing an interesting program, and looking for a large attendance.
Augusta, Wis., Nov. 17. GUS DITTMER, Sec.

The Washington State Beekeepers' Association will hold its 20th annual convention in the Farmers' Room, in the Court-house, in North Yakima, on Wednesday and Thursday, January 7, 8, 1914. A good program is promised, and a surprise is in store for all who attend. A banquet will be served on Thursday. All beekeepers are urged to be present, whether you are a member or not.

J. B. RAMAGE, Sec.

North Yakima, Wash., Nov. 11.

CHICAGO NORTHWESTERN BEEKEEPERS' MEETING.

The meeting of the Chicago Northwestern Beekeepers' Association will be held Dec. 17 and 18 this year, at the Great Northern Hotel, Room L 38. The secretary has arranged a program with papers by several of the leading beekeepers. As this has been a good year, beekeepers should make every effort to attend. Chicago is centrally located, and we should have a good attendance from Wisconsin, Michigan, Indiana, Minnesota, and Illinois. A cordial invitation is extended to every one; and if you do not receive a card asking you to attend, this notice will be an invitation to all.

L. C. DADANT, Sec.

The Eastern Illinois beekeepers' convention will be held at St. Anne, Ill., in the Farmers' State Bank Building December 8 and 9, with an evening session on the 8th. Every effort for the best meeting ever held is being made, and the prospect is that it will be a success. Many prominent beemen have promised to come, including Mr. Baxter, Pyles, Kildow, I. F. Kenkell, of New London; also Geo. Lotz, of Boyd, Wis., has promised to come. Although the question-box method will prevail we expect a talk by Mr. Baxter and also by Mr. Pyles. A special rate of \$1.00 a day has been made at the hotels. Make an effort to come and help us make this convention better than any State convention.

St. Anne, Ill., Nov. 8.

H. S. DUBY, Sec.

The California State Beekeepers' Association will hold its annual convention at the Y. M. C. A., Los Angeles, Cal., Dec. 9, 10, 11. I can not give you complete program at present, but it will consist of live topics—topics not only interesting but very important—in fact, concerning the vitals of our industry.

Dec. 9, 1:30 P. M., meeting of the Directors of the Consolidated Honey-producers of California (an incorporation belonging to the Association). At 2:30 P. M. there will be a meeting of the executive committee and advisory committee (which consists of the Presidents and Secretaries of the county clubs and local organizations), and will continue the 10th and 11th.

Newhall, Cal., Oct. 21.

J. W. FERREE.

The annual convention of the Missouri State Beekeepers' Association will be held at Snapp's hotel, Excelsior Springs, Mo., Dec. 16 and 17, 1913. The following is the program:

DEC. 16, 8:00 P. M.

Paper—Beekeeping as a Business,
R. A. Holekamp, St. Louis, Mo.
Address—The Good Bees do for Humanity,
Dr. A. D. Wolfe, Parkville, Mo.
Paper—Beekeeping in Italy and France,
C. P. Dadant, Hamilton, Ill.
Speech—Wit and Humor of the Bee and the
Beekeeper,
J. T. Martin, Liberty, Mo.

SECOND DAY, 9:00 A. M.

Paper—Beekeeping in South Missouri and Northern Minnesota,
H. F. Strang, Cleo, Mo.
Address—How to Avoid Getting into Trouble
with your Neighbor on account of your Bees,
M. E. Darby, Springfield, Mo.
Address—How to Beat 'em if You Do,
A. T. Rodman, Kansas City.

Papers—Rearing Good Queens,
E. E. Lawrence, Doniphan, Mo.;
L. E. Altwein, St. Joseph, Mo.
Address—Mistakes of an Old Beginner,
Clay Foley, Missouri City, Mo.
Paper—The Best Way to Increase,
H. C. Gadberry, Miami, Mo.

1:30 P. M.

Address—A Commission Merchant's Experience
in Handling Honey,
C. C. Clemons, Kansas City, Mo.
Address—Experiences of a Supply Dealer,
C. E. Walker, Kansas City, Mo.
Address—How to get a Good Foul-brood Law,
J. W. Rouse, Mexico, Mo.
Paper—History of Missouri State Beekeepers'
Association,
W. T. Carey, Wakenda, Mo.

For the good of the association, everybody discuss and push it.

SOME OBJECTS PROPOSED FOR THE BENEFIT AND WELFARE OF THE MISSOURI STATE BEEKEEPERS' ASSOCIATION.

1. The promotion and maintenance of a social organization of people interested in apiculture.
2. To afford a means of recording the experience of its members.
3. To promote original investigation in the development of bee culture.
4. To co-operate in securing rational legislation for the control and elimination of foul brood.
5. To stimulate and promote the bee industry.
6. To maintain and protect the interests of the membership when they are in the right, morally, socially, and legally.
7. To promote and encourage improvements in methods of handling bees, queens, and honey.

Liberty, Mo. J. F. DIEMER, Sec.

The second annual convention of the Iowa Beekeepers' Association will be held at Des Moines, Ia., December 10, 11, 12, 1913. The following is the program:

WEDNESDAY, DECEMBER 10, 10 A. M.

Address by President, Frank C. Pellet, Atlantic; report of Secretary, S. W. Snyder, Center Point; report of Treasurer, C. H. True, Edgewood; reports of standing committees; appointment of committees.

1:00 P. M.

Some side lines on the farm, J. W. Jarnagin, Des Moines. Marketing the crop, W. P. Southworth, Sioux City. Beekeeping as a business, B. A. Aldrich, Smithland. Selling direct to the consumer, J. L. Strong, Clarinda. Ladies' informal meeting in sep-

arate room in charge of Miss Nina Secor, Forest City.

8:00 P. M.

Beekeeping in Europe, C. P. Dadant, Hamilton, Illinois.

THURSDAY, DECEMBER 11, 9 A. M.

Election of officers; arrangement of apary, C. H. True, Edgewood. Sweet clover; what it will do for the farmers and beekeepers of Iowa, by Frank Coverdale, Delmar. This address alone will be well worth the time and expense of a journey across the State to every beekeeper, especially those combining beekeeping with other branches of agriculture.

1:00 P. M.

Beekeeping as a side line, and the fun of the thing, Hamlin B. Miller, Marshalltown. Modern methods of caring for extracted honey, E. R. Root, Medina, Ohio. Mr. Root's address will be followed by a demonstration of capping-melter, power extractor, and other machinery for the large producer, by Mr. Root and Mr. F. C. Scranton, of Des Moines.

8:00 P. M.

How may we increase the consumption of honey? Eugene Secor, Forest City. Increase, J. W. Bittenbender, Knoxville. Advertising, Dr. A. F. Bonney, Buck Grove. Comb or extracted honey, C. L. Pinney, LeMars.

FRIDAY, DECEMBER 12, 9 A. M.

Beekeepers' legal status, Russell E. Ostrus, Attorney for Iowa Beekeepers' Association, Des Moines. Treatment of disease, Edward G. Brown, Sergeant Bluff. Helps and hindrances in dealing with foul brood, J. W. Stine, Salem.

1:00 P. M.

Address, Prof. W. J. Kennedy, Ames. A season's work, F. W. Hall, Colo. Exhibits, R. H. Longworth, Polk City. Every member is invited to bring samples of his best product, and to come prepared to demonstrate any new method of interest.

In September I advertised in all the bee papers published in the United States and Canada. Soon I was flooded with letters from all over the States, Canada, and several foreign countries, including postage for various sizes of packages. As fast as I received them I booked every order, and began mailing or prepaid express until my 5000 books were gone. I then got another lot, and they were soon gone! I then had to wait for 30,000 more to be printed, and they were delayed two weeks by freight. Over 600 orders for the books came during this delay, some asking for 100 copies, and many wanting more.

The League fund has been exhausted in printing, postage, drayage, freight, and help. I have 245 orders that I can not supply, and just a sample copy I can send with return postage to each. I am sorry that I can not supply all orders, and more are coming daily. Certainly the thousands of books I have sent, if placed in the hands of good cooks, will create a great demand for more honey.

I bought these valuable books of The A. I. Root Co., Medina, Ohio, and I believe you can buy them for \$4.50 per 100 copies. With these orders were reports for 1913, and generally beekeepers were selling most of their honey in a home market.

Platteville, Wis., Nov. 12. N. E. FRANCE.

The A. I. Root Co.:—Please give me a price on one dozen Italian queens. I used 25 of your queens last fall which I got through Mr. Hoshal, and have had the greatest success and the best crop of honey since I began keeping bees. I can probably sell a number of queens to my neighbors who keep a few colonies of bees. JAMES MARLOW.

Grimsby Park, Ont., Can., July 23.

A REQUEST FOR THE PRAYERS OF GOD'S PEOPLE.

I have been a reader of GLEANINGS since 1908, and can say that I enjoy your paper, especially A. I. Root's Home papers. May God bless you, and long may you enjoy the blessings of health and strength to continue the good fight against liquor and the devil.

We are going to try to put the saloon out of our little village at next election. Give us your prayers, and ask God to help us put them out. J. T. J. Percy, Ill., Oct. 6.

Callender Shoe-scraper

Every House-
keeper will
want one

A glance at the
Illustration
will tell you
why.

Combination Scraper and Brush

Scrapes the mud from the sole of the shoe and cleans the sides at the same time. Every housewife should have one. It will reduce her work in saving the time necessary to clean rugs and floors, which otherwise would be tracked with dust and dirt from the street.

It is made of the finest material; no screws to rust; heavily japanned. Brushes remain stationary. It is so simple that a child can change the brushes.

Every household needs one or more.

Premium Offer: We will send one of these Callender Shoe-scrappers as premium to any reader who sends us TWO NEW subscriptions to GLEANINGS IN BEE CULTURE for six months at the rate of 25 cents each.

Postage on Canadian subscriptions 15 cents additional for each trial subscription for six months.

The A. I. Root Company, Medina, Ohio

A BEEKEEPER who uses cheap shipping-cases for his comb honey isn't necessarily mean. The chances are he's thoughtless. But many grocers or other dealers who receive his honey will not accept this generous view.

Among that number may be the very grocer he wants to influence most—the one who has the best trade in honey in that locality.

So he should use good shipping-cases, such as we make. To use them is economy, not an expense.

For particulars write us or our dealers, or consult our catalog.

The A. I. Root Company
Medina, Ohio

New York, Chicago, Philadelphia, Washington, Des Moines.

This set is made up of a pair of six-inch, a pair of five-inch, and a pair of three-and-one-half-inch embroidery scissors with nickel-plated and polished blades. Elaborately designed gold-plated handles. The three pairs of scissors in the set are mounted on a card and packed in a lined box. List price of scissors, \$1.00.

PREMIUM OFFER

We will send one of these sets of scissors postpaid to any reader who sends us one **new** yearly subscriber to **GLEANINGS IN BEE CULTURE** at \$1.00 per year, or the same for four **new** six-months trial subscribers at 25 cents each.

THE A. I. ROOT COMPANY, MEDINA, OHIO

A WORD OF PRAISE FOR THE PREMIUM KNIVES.

Calvert, Ala., Oct. 22, 1913.

The A. I. Root Co., Medina, Ohio.

I received the set of premium knives and am well pleased with them.

Yours very truly,

R. RHODENBERGER.

The A. I. Root Co., - Medina, Ohio.

THE BEEWARE BRAND MEANS SUCCESS
INSURANCE

Send for Annual Catalog which will tell you who is your nearest Distributor.
G. B. Lewis Company, Watertown, Wis.

EARLY-ORDER CASH DISCOUNTS

**Apply Here just as they
do at the Factory**

As Southwestern distributors of **ROOT'S BEEKEEPERS' SUPPLIES**, we are very glad to make this first announcement of a special discount for early orders, accompanied by cash, to our beekeeping friends throughout this territory.

We give exactly the same discount that is granted by the manufacturers of these famous goods, and the prices in our special catalog are the same as their own. There is an extra saving for you in ordering from us—**FREIGHT**. Better give this your special attention before ordering from elsewhere.

**THE CASH DISCOUNT ON EARLY ORDERS PLACED IN
DECEMBER IS 4 PER CENT.**

This applies to every thing in the way of beekeepers' supplies except a few special articles. On large general orders we will allow the discount on some of the excepted articles, not exceeding ten to twenty per cent of the entire order.

**REMEMBER WE MANUFACTURE THE FAMOUS WEED
PROCESS COMB FOUNDATION.**

We have a large demand for this product, and are turning out comb foundaion of the finest quality. Include what you will need for the opening of next season in your early order. Shipment may be held subject to your convenience if desired; but get your order in now and save 5 per cent.

52 times a year—not 12.

THE YOUTH'S COMPANION, BOSTON, MASSACHUSETTS

*Your Grandfather Read It,
Your Father Read It,
Are YOU Reading It?*

Buying the Farm

"What would you consider these places adjoining yours worth?"
 "About \$30 an acre."
 "That is, if you, as a local man, went to buy them you could get them at \$30 an acre?"
 "That's it."
 "But if I, as an outsider, went to buy them —"
 "They'd probably size you up as from town, and ask you \$80 to \$100. I've known two or three places on this road where sales have been spoiled that way."
 "Meanwhile they have been in the hands of tenants for thirty years and have gone back in value from \$150 and \$200 to \$20 and \$30 —"
 "Yes, it's that dog-in-the-manger policy that has hurt us."

Here is land lying in one of the most beautiful and fertile valleys of the section between the Hudson and Connecticut—a valley that used to be the seat of an old colonial aristocracy, where most of the buildings could not be replaced now for less than \$20,000 or \$30,000.

If you have the least desire to own a bit of land of your own and think a farm beyond the dreams of avarice, you should read the series of six articles by A. C. Laut telling about the bargains in old farms, on good roads, within a hundred miles of New York City, that can be picked up at from \$10 to \$50 an acre. *A thousand dollars, actual cash, can finance a 25-acre unimproved farm purchase.*

A Living From the Farm

Then, having the farm, if you want to know how to live and to make a living out of it, read **Back to the Farm—Net**, a five-part story of city dwellers who took a chance and made good in the country.

The *Net* is what they got out of it—what you can get out of it: Instruction, health, comfort, contentment, and a heritage of health for the children.

The money end of it? The author paints no iridescent rainbow but concludes that a good many will succeed along a modest line of hard work, close personal attention, planning one thing at a time and going ahead slowly, being on the job all the year round. *A better living than you get in town and a life more worth while.*

Dividends From the Farm

For several years the Department of Agriculture, through its field agents, has been experimenting with various farms, with the owners' co-operation, along the lines of system and efficiency. We are able to publish the results in a series of four articles, under the title **Old Farms Made New**. They tell how to replan a farm for economy in time and labor, as efficiency experts plan a factory.

The difference is the difference between a deficit and dividends.

If you actually become your own boss and work at getting a living out of the land, there's no paper in the world you need so much as

HOW FAR CAN A BEE SEE?

That question has been argued "time and again," but it doesn't worry me one-half so much as does another question—

How much can you see?

How many people there are to look, and how few there are to see and to think!

The best realms for good seeing are in nature.

The Guide to Nature

tells you how. . It teaches people to see the wonders and beauties of nature.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached to all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; combs and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and en-

tirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces or more, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened, weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy and No. 1 white comb, 16 to 17; white extracted, 10 to 11. Beeswax, 30. There is an active demand for white comb honey.

Boston, Mass., Dec. 6. **BLAKE-LEE CO.**

COLUMBUS.—Fancy white comb brings $17\frac{1}{2}$; No. 1 white comb, $16\frac{1}{2}$ to 17; only a fair demand, on account of approaching holidays.

THE EVANS & TURNER CO.
Columbus, Ohio, Dec. 2.

INDIANAPOLIS.—Honey is now moving freely. Fancy white comb is selling at 16 to 17; No. 1 white, one cent less; finest extracted, 9 to 10 cts. in square five-gallon cans. Beeswax is in good demand, and producers are being paid 32 cts. in cash or trade.

Indianapolis, Ind., Dec. 6. **WALTER S. POWDER.**

LIVERPOOL.—The market for Chilian honey is very dull, and there is practically no business being done. For pile X, \$8.40 is quoted; pile 1, \$6.96 to \$7.20; pile 2, \$6.48; pile 3, \$6.00; pile 4, \$5.52. By the steamships Florence and Ville du Havre, 767 barrels arrived.

Liverpool, Eng., Nov. 28. **TAYLOR & CO.**

SCHENECTADY.—The holiday rush is now on, and the honey market is quiet. We can not understand why there is less honey used at this time; but the wholesale market is generally dull during the latter part of December. We do not change quotations, but stock is moving slowly.

CHARLES MACCULLOCH.

Schenectady, N. Y., Dec. 5.

Honey reports continued on page 5.

We are in the Market for Both Extracted and Comb Honey

Would like to hear from those having Fancy and Number One Comb Honey. State best prices delivered Cincinnati. We want Extracted Honey, too. No lot too large or too small for us. We remit the very day shipment is received.

THE FRED W. MUTH CO.

204 WALNUT STREET

"The Busy Bee Men"

CINCINNATI, OHIO

P. S.—Ship us your old combs and let us render them for you. Our process extracts the last drop of wax from the slumgum. We make money for you if you will ship us your old combs and cappings for rendering. Write for full particulars.

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping Cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

Early-order discount this month is 4 per cent.

Honey reports continued from page 2.

IDAHO FALLS.—Comb honey is all sold. We quote fancy white extracted, in 60-lb. tins, at 7 cts.

IDAHO HONEY-PRODUCERS' ASSOCIATION,
Idaho Falls, Dec. 6. F. C. BOWMAN.

BUFFALO.—There is not much change in our honey market since our last quotation. Demand is slow, and no signs are in sight that look any better. No. 1 to fancy white comb brings 16 to 17; No. 2 ditto, 14 to 15; No. 1 buckwheat comb, 13 to 14; white extracted, 8½ to 9; dark, 6½ to 7½. Beeswax brings 26 to 30. Receipts of comb honey are light.
Buffalo, Dec. 8. W. C. TOWNSEND.

DENVER.—Our local market is well supplied with honey, and our jobbing quotations are as follows: Strictly No. 1 white, per case of 24 sections, \$2.70; choice, \$2.57; No. 2, \$2.43; extracted white, 8 to 9 cts. light amber, 7 to 7½. We are in the market for beeswax, and pay 30 cts. per lb. in cash, and 32 in trade, delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION,
Denver, Col., Dec. 6. FRANK RAUCHFUSS, Mgr.

NEW YORK.—We quote as follows from the *Journal of Commerce and Commercial Bulletin*, Dec. 9: Quiet market with most outside quotations full. Clover, comb, fancy, per lb., 16; ditto No. 1, 15; ditto No. 2, 13; clover extracted, per lb., 8½ to 9½; buckwheat, comb, per lb., 12; West Indian, extracted, per gal., 60 to 62. Supplies of choice domestic wax are very light, and market closes firm in range of 32 to 34.

New York, Dec. 9.

NEW YORK BRANCH.

ZANESVILLE.—Despite the proximity of the holidays, when a lull is usually to be expected, the demand for honey continues fairly good. Ruling prices to the retail grocery trade are as follows: Fancy white, 20; No. 1 white, 18½ to 19; light amber, 17. Extracted in five-gallon cans, 9½ to 11, according to quantity. This applies to best grades, as there is little demand for off grades here. Producers are paid 30 cts. cash, 32 trade, for beeswax of good average quality. Wax wholesalers at 40 cts. up, according to quantity.

Zanesville, Ohio, Dec. 3.

E. W. PEIRCE.

ALBANY.—The honey market is easing off, as the demand is falling off. Stock and receipts are light, but demand is light; and as cold weather advances it will not increase any. The weather for two months has been very favorable. We quote fancy white clover, 16; medium, 15; buckwheat and mixed, 13 to 14. Extracted is very dull, and stock is accumulating. Prices favoring the buyer will be lower before we can move the accumulations. We quote nominal, but do not refuse offers. Buckwheat extracted, 7 to 7½; mixed clover, 7 to 7½; white clover, 8 to 8½. Beeswax, 31 to 32.

Albany, N. Y., Dec. 4.

H. R. WRIGHT.

ST. LOUIS.—The demand for comb honey has improved somewhat, but is not nearly what it should be. The market is well supplied, especially the fancy white western stock. There is also quite an abundance of Southern comb honey in this market. We are quoting to-day in a jobbing way, fancy comb honey at 15 to 16; No. 1, 14; light amber, 11 to 12; dark amber, 9 to 10; by the case, fancy white comb honey, \$3.00 to \$3.25; No. 1, \$2.50 to \$2.75; light amber, \$2.25 to \$2.40; dark amber, \$1.75 to \$2.00 per case; light-amber extracted, in barrels and half-barrels, 6½ and 5-gal. cans, 7½. Beeswax is in good demand at 32 for prime. Inferior and impure sells for less.

R. HARTMANN PRODUCE CO.

St. Louis, Mo., Dec. 8.

BANKING BY MAIL AT 4%

E. B. SPITZER, Cashier.

ASSETS OVER ONE MILLION DOLLARS

At least two per cent of the gross revenues of some railways is spent in satisfying claims for damages. On the Boston & Maine, for example, damage to property and personal injuries entailed an expenditure of over \$800,000 in 1911. On another railway, at the end of one year's business, claims amounting to nineteen millions were pending. The "claim agent" must combine in himself many varied qualities, and J. O. Fagan (the expert so widely known as "the Railway Signal Man") makes us intimate with him in interesting experiences on the "human side." The article is one of hundreds announced by *The Youth's Companion* for 1914.

A Day with Edison

"I feel bully today, I slept only four hours last night."

This customary morning greeting of the great inventor after one of the big days he delights in, gives an insight into his wonderful recuperative powers, which enable him to "come back" constantly, with undiminished vim and energy, after the most arduous work.

To realize how fully Mr. Edison lives up to his sobriquet of "the Human Dynamo," you must read the intensely interesting account of one of his ordinary days (a mere eighteen hours or so) in

POPULAR ELECTRICITY AND THE WORLD'S ADVANCE for December

Mr. W. H. Meadowcroft, the author, has worked for years side by side with the great inventor and enjoys his confidence. He is, therefore, able to give you an intimate view of Mr. Edison through every moment of his long and strenuous day. From the time the great man arises in the morning until he retires, far into the night, you will follow his goings and comings; be with him in his laboratory, shop and test room; so close that you get a glimpse, even, of his wonderfully interesting mail from all over the civilized world and read the queer and freakish problems propounded to him. With Edison it is half an hour here, twenty minutes there, ten minutes another place, meeting instantly and squarely a staggering number of difficult situations and intricate problems. You will wonder at the many things he does in a day and how he makes every minute and every second count.

HONEY Bought Sold...

Central Ohio Honey Market

Finest quality WHITE-CLOVER honey a specialty. Producers who have not yet sold their crop should write. Those who have disposed of their crop and are in need of more for their trade, I shall be glad to supply at lowest prices consistent with highest quality and a fair margin of profit.

The correspondence of wholesale and retail dealers is especially solicited, as I am in position to furnish a grade of comb and extracted honey that will suit the most exacting trade. If interested, write for quotations and full description of the line.

Bee Supplies

Now is the best time to place your order for supplies for use next season. The prospect was never brighter, and there is every thing to gain and nothing to lose by ordering before the spring rush is on. Ask for revised price list and early-order discounts.

INCREASE Your SALES

... By a Liberal Distribution of Our Booklet ...

THE USE OF HONEY IN COOKING

The 1913 edition is ready for distribution, and may be had in quantities at reasonable rates. The back cover page affords space for a display advertisement. As this booklet contains no advertising whatever, it can be employed with telling effect. Better order your supply early. Sample and prices in quantities on application.

Fifty-eight pages; one hundred and twenty-two valuable recipes in which honey is used. Just the book for every household. A two-cent stamp will bring a copy.

How to Keep Bees

By

Anna Botsford Comstock

This is an excellent book for the beginner. Nothing better. We cordially recommend it to all who are learning beekeeping by their own effort. Having commenced beekeeping three times, the talented author is in a position to furnish the right kind of advice. You can not go wrong in ordering this book. It is charmingly written and easily understood.

Latest Book "Profitable Poultry"

Finest published, 128 pages practical facts, 180 beautiful pictures. Tells how to breed, hatch, feed and market by latest improved methods. All about **Runner ducks** and 52 other pure-bred varieties. This 50 cent book and lowest price list of best fowls, eggs, incubators, supplies, etc., only 5 cents.

BERRY'S POULTRY FARM, Box 97, Clarinda, Iowa

The famous polar explorer, Sir Ernest Shackleton, who preceding Amundsen and Scott in the antarctic, succeeded in reaching what was then "the farthest south," describes, in an article written for *The Youth's Companion*, the qualities that lead to success in polar work, and illustrates them by thrilling incidents drawn from actual experiences in the ice.

PROTECTION HIVE

The Shallow Metal-roof Cover and the outside rim make a divisible deep cover which can be handled together or in part. They eliminate the chaff-tray nuisance and the heavy bungle-some deep cover in manipulation. The rim holds the overhead packing in winter, and acts as a super protector at other times. This combination is the finest in hive construction on the market to-day.

Dead-air spaces or packing, as you prefer; $\frac{3}{4}$ material in the outer wall. Special circular showing 16 large illustrations will explain all.

A. G. Woodman Co.,
Grand Rapids, Mich.

The BEEKEEPERS' REVIEW

would like very much to enroll a goodly number of new subscribers for the year 1914. We are printing 400 extra sets of the REVIEW for the last half of 1913; and as long as they last they will be included free to all new paid-in-advance subscribers for 1914. All progressive beekeepers should subscribe for two or three good bee journals. We are making a special low price on the REVIEW when clubbed with other bee journals.

Here is a { GLEANINGS, one year, \$1.00 } Both, one year, for \$1.50.

The Management of OUT-APIARIES

72-page book by the well-known writer G. M. Doolittle, New York

Non-swarming, or the control of swarms in the home yard, is a comparatively easy problem; but the securing of perfect control of the swarming impulse in four or five yards located some distance from your dwelling is not so easily accomplished. The author tells how he secured this and an average of 114½ lbs. of comb honey in a poor season. His latest methods are fully described in the fourth edition of the above. 1913 edition ready for mailing. Price 50 cts. postpaid. Order now from the publishers.

"If goods are wanted quick, send to Pouder."

This Bee-supply House is Twenty-five Years Old This Month

This advertising business is an interesting subject, and I have given it hard study for just twenty-five years. An expert advertising man of this city, Mr. Carl D. Spencer, has this to say in one of his announcements: "In September I canvassed over two hundred homes and asked questions. I learned this: That practically everybody reads advertisements; that nearly everybody doubts the truth of advertisements generally; that most people do not separate the true from the false, but discount what is said in all or nearly all of them; that almost every one has been tricked into spending money through false or misleading advertisements. They blame the business man and not the magazines because false advertising is permitted, and every one desires a means by which she or he may recognize a truthful advertisement."

The above interested me greatly, and I have been trying for a solution as to how to have my advertising identified as the genuine article. I have never overrated my class of goods. In bee supplies I simply say that the goods which I handle are the Root make, and that speaks volumes. I receive hundreds of testimonials from those who have dealt here, and these same friends are recommending my goods to their neighbors. In shipping large orders of bee supplies, there is a declining scale of prices on quantity lots, and I save this for my patrons, often unexpectedly to them, but gratefully received as a rebate. Frequently neighbors club together and secure their supplies in one shipment, thus creating a saving in the aggregate cost as well as in transportation charges. I should like to place my catalog of supplies in your hands, which shows the new schedule of prices, and gives list of discounts offered for early orders. I also include with each catalog a letter which I should like to have you read.

Just now I am advertising finest extracted honey by parcel post. I am mailing tight-seal cans containing four quarts, two quarts, and one quart, and also paper honey-jars filled with granulated honey. With these paper honey-jars one can peel off the waxed paper and leave a beautiful cone of white granulated honey to serve on the table, and I assure you that this has never been equaled in any confection. This is strong language; but if you receive a sample you will admit that my advertisement is not overdrawn. I have mailed these goods to Chicago, Cincinnati, Louisville, and to many small towns, without a failure thus far. Perhaps some of you would like one of these packages mailed to some of your friends as a Christmas souvenir. Can you think of a nicer, *sweeter* token? If interested let me mail you my descriptive circular with price list. I will also include price list of honey to be shipped in larger quantities.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on common stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER.

SUNDAY SCHOOL TIMES.

This most excellent weekly, devoted to the interest of the Sunday-school and the religious uplift of the family, is better than ever. The regular price is \$1.50 per annum, or \$1.00 in clubs of five or more. If any of our readers desire we shall be pleased to take their names in connection with GLEANINGS at \$1.00 for the Sunday School Times or \$2.00 for both.

HOT-BED SASH.

This is the time of year to be getting ready for the early spring vegetables by providing hot-bed sash. We call attention to our choice cypress sash, which are made 3 ft. 4 in. by 6 ft. for four rows of eight-inch glass let into grooves, or rabbeted. Unless otherwise specified, we furnish grooved sash. A single one, K. D., \$1.00; 5 of the same in a crate, \$4.75; 10 for \$9.00. If put together, add 10 cts. each; and for each coat of paint add 10 cts.; 8 x 10 glass for same, \$2.80 per box of 90 lights; 5 boxes at \$2.60; 10 boxes or over at \$2.50.

SWEET-CLOVER SEED.

The demand for this seed is remarkably good, especially in Iowa, Kansas, and Oklahoma, where its value is best known. The supply of seed bids fair to be somewhat short of the demand again this year. Because the seed continues to ripen for some weeks, the question of saving the seed is a difficult one, and those new in the business are apt to find the greater portion shelled off before they get ready to harvest it. What looks like a fine crop of seed early in the season may dwindle to small proportions by the time it is saved and hulled. We are prepared to supply choice seed at the following prices:

Prices in lots of	1 lb.	10 lb.	25 lb.	100 lb.
Melilotus alba, biennial...				
White sweet clover, hulled	.24	\$2.20	\$5.00	\$20.00
White sweet clover, unhull'd	.17	1.50	3.50	13.00
Melilotus officinalis, biennial				
Yellow sweet clover, hulled	.28	2.60	6.25	24.00
Yellow sweet clover, unhull'd	.21	1.90	4.50	17.00
Annual yellow, hulled...	.14	1.20	2.75	10.00

SECOND-HAND FOUNDATION MILLS.

We have to offer the following list of foundation machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0139, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0142, 2½ x 6 hexagonal thin-super mill, in fair shape. Price \$10.00.

No. 0153, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0154, 2½ x 6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0156, 2½ x 6 extra-thin-super mill, fair. Price \$10.00.

No. 0157, 2½ x 6 thin-super mill in good condition. Price \$12.00.

No. 0160, 2½ x 6 hexagonal thin-super mill, in good condition. Price \$12.00.

No. 0165, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0167, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0176, 2½ x 6 extra-thin-super mill in fair condition. Price \$12.00.

No. 0180, 2½ x 6 hexagonal thin-super mill, in fair condition. Price \$10.00.

No. 0183, 2½ x 6 hexagonal thin-super mill, very good condition. Price \$14.00.

No. 0187, 2 x 10 round-cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0188, 2 x 10 round-cell medium-brood mill, in good condition. Price \$14.00.

No. 0191, 2 x 10 round-cell Pelham mill in good condition for this kind of mill. The bases of the cells are not natural shape, but the walls are regular. Price \$7.00. Sample mailed free if interested.

No. 0182, 2½ x 12 round-cell medium-brood mill in very good condition. Price \$20.00.

No. 0186, 2½ x 10 hexagonal cell medium-brood mill in good condition. Price \$20.00.

No. 0206, 2½ x 10 hexagonal cell heavy brood Dunham mill in good condition. Price \$15.00.

No. 0207, 2½ x 6 hexagonal cell thin-super Dunham mill in good condition. Price \$10.00.

No. 0210, 2 x 10 round-cell medium brood mill in extra-good condition. Price \$16.00.

No. 0211, 2½ x 10 hexagonal cell medium-brood mill; rolls recut, and practically as good as a new machine. Price \$28.00.

No. 0212, 2½ x 10 hexagonal medium-brood mill; rolls recut, and practically as good as a new mill. Price \$28.00.

SPECIAL NOTICES

A. I. ROOT

The yam referred to on page 912 is, I find, grown on the farm owned by L. B. Varn, proprietor of Hotel Varnada, and he is selling them at 40 cts. a peck, or \$1.00 per bushel. We are just now happy over a peck I have received by parcel post. I do not yet know the name of this particular yam.

DASHEEN TUBERS FOR FLORIDA AND OTHER SUBSCRIBERS IN THE SOUTH.

All subscribers in Florida, or others so far south as to be out of danger from frost while in the mail, may have their dasheen tubers mailed from Bradentown at once, if they will send their names to me here in Bradentown. All who have paid up on GLEANINGS one year or more are entitled to two small tubers that may be planted at once if you will protect them if frost should come. All in the North should send to Medina, Ohio. My impression is the dried tubers are not likely to be injured by cold while in the mail-bags anywhere; but this remains to be proven.

Periodicals and "Sittlichkeit."

Many of our young people know nothing of some of the best, most fascinating reading in the world, because in their leisure for reading the books and periodicals closest at hand are time-wasters or worse. In this connection, the following editorial from *The Youth's Companion* is timely:

In the address that Lord Haldane gave before the American Bar Association a few weeks ago, he had much to say about *Sittlichkeit*. The word is German, and in English has no exact equivalent; but it means the common body of beliefs, standards, and ideals that represent the ethical attainment of a people. Lord Haldane describes it as governing a race far more intimately than law, which, indeed, is merely the expression of a part of it; and far more powerfully than individual conscience, of which, indeed, after God, it is the chief prop and inspiration.

He dwells upon its far-reaching effects, and the overwhelming importance of its being not only of high quality, but of really compelling strength. It is obvious that the sittlichkeit of a nation may deteriorate, and that its deterioration is a national disaster.

Lord Haldane was pointing out the undoubted fact that the English-speaking races have virtually the same sittlichkeit, and that it forms the greatest bond of friendship between them. But in his speech lies a lesson for any one who is able to influence the daily thoughts of the nation, and to insinuate standards of manners or morality. There are many such persons; but *The Companion* wishes here to speak of those of its own trade, that of writing and publishing, for what is written and printed and strewn broadcast over the land, more than anything else, forms and upholds the sittlichkeit of the community. From periodicals, books, and plays—more, perhaps, than from any other source—do our young people, and our old ones, too, receive their education in the common ethical tradition of the race. Plainly, any publisher or writer who uses his power to lower the ethical standards of the people, to weaken their confidence in a powerful moral tradition, is an anti-social force and a public enemy.

A part of the sittlichkeit of the American people has been a wise reticence in the public discussion of questions of sex, a fine refusal on the part of writers and publishers to profit by any appeal to prurient curiosity; a deep conviction that to exploit such topics in the popular press, no matter with what motive, is certain to do great harm, and little if any good.

But we seem to be in danger of losing that part of our fine national tradition—a most useful part as *The Companion* believes, and one that every decent man and woman ought to fight for in every possible way. Our literature has been clean; shall it become dirty? That is the question that faces us all, and that must receive a national answer. Our periodicals, our novels and our stage are giving to the public—any public that will pay, no matter how unfit—discussions and descriptions that no publisher or producer would have dared, or would have been willing, to offer twenty years ago. They give; is the public willing to receive?

This is the time of year when people are deciding what periodicals they will take during the ensuing twelvemonth; when all the periodicals present their bills of fare for the coming year, and urge their attractions, some with honest, some with specious arguments. Moreover, they put forth clubbing offers that, by linking unsuspected evil with known good, may completely thwart a subscriber's most careful intentions. There is only one safe course. No one should subscribe to a periodical of which he has not first-hand recent knowledge, and no one should select for his own reading, and that of his family, any publication that does not express and seek to uphold the highest aspirations of the nation.

Kind Words from our Customers

A PRESIDENT OF THE UNITED STATES WHO
"READS HIS BIBLE EVERY DAY."

The following kind words from our good friend Florence D. Richards, Ohio President of the W. C. T. U., I am sure will be found interesting from several points of view.

Dear Mr. Root:—I have just finished reading your articles in the Aug. 15th issue of GLEANINGS, and I want to tell you how much I have enjoyed them. I wish that "sermonette" on the first Psalm could be read by every young people's society in the land, for it is replete with good sound "takable" advice. I, too, wish that each person, young and old, would take the pledge: "I promise to read my Bible every day," and then faithfully keep it.

The *World's Morning Watch*, or *The Daily Bible Publishing Company* of New York sends out a little monthly magazine called "Daily Bible," which I have found very helpful. On the outer cover of the August number are these words from the President of the United States, Woodrow Wilson:

"I am sorry for the men who do not read the Bible every day. I wonder why they deprive them-

selves of the strength and of the pleasure. It is one of the most singular books in the world, for every time you open it some old text that you have read a score of times suddenly beams with a new meaning. There is no other book that I know of, of which this is true; there is no other book that yields its meaning so personally, that seems to fit itself so intimately to the very spirit that is seeking guidance."

I think we are to congratulate ourselves and the nation on having a president who reads the Bible every day. Such a righteous example will truly exalt the nation. "His leaf also shall not wither; and whatsoever he doth shall prosper."

I rejoiced with you in your climb over those Michigan hills, and enjoyed the Sunday-school led by your friend Mrs. Wilson. I am sorry those Michigan men failed to enfranchise her and the rest of the State's noble women. I hope you may go on climbing hills and "renewing your strength," until you will have rounded out a full century of years in the earthly existence, and ascended the hill of the Lord to receive the crown laid up for the faithful.

Lakeside, Ohio.

FLORENCE D. RICHARDS.

ONE MORE FOR THE "100-YEAR-OLD" CLUB.

I notice by the blue-record address that another year has rolled by, and my subscription should be renewed again. The paper is still very interesting, and much good is being accomplished. A. I. Root is certainly a peculiar man. At his age he is doing a wonderful lot of work. This is what is keeping him in good health, and I hope he will hold out at least thirty years yet.

I am 58 years old, and am accomplishing more work and making more money than at any other period of my life. I have more desire now than ever to live to be one hundred years old.

Experience has taught me some great lessons that I can profit by at this time. The good lessons I can profit by; and the poor or bad lessons I also profit by, by simply avoiding them, knowing by experience they were a cause of failure.

I am just as intensely interested in the wonderful progressive advancement in our nation as Mr. Root. I also make just as many discoveries, but I have no way of bringing them before the public because of the want of a publication.

The most interesting part of GLEANINGS now is the temperance question. Years ago I called this movement a national one. I often wondered how long our nation would keep raking in a revenue from this greatest of all evils. Every year it is larger and larger, in spite of all the preachers and Prohibitionists. The business class of the people are severely letting this question alone. Not one word comes from our churches advocating a business movement, and that a national one. Only once in the last year have I noticed that Mr. Root mentioned it along this line. Now public sentiment is beginning to wake up to the fact that each State and then the nation must take a hold of this matter, or this nation will end in despair.

There should be national laws passed to stop the manufacture of intoxicating liquors, as strong and severe as it now has against the counterfeiting of money. Then we could begin to accomplish something. If it were not for this increasing thirst for strong drink there would be no howl about the high cost of living. Stop the manufacture of drink, and use the grain for food for man and beast, and see how quick there would be plenty for all at half the cost now being paid for this grain—grain for food, not grain for drink. If this nation of ours must have a revenue, let it tax the grain, not the curse of the grain after it has been made into liquor.

Mr. Root, Mr. Terry, and myself are living without stronger drink than water, and our health is better in every way. If this is true with us, every other man or woman can live longer and better without it. Why manufacture it?

There is no sense whatever in abusing the saloon-keeper. He is our nation's servant, sanctioned by the government to dispose of this great river of booze so this whisky-soaked nation can rake in this great "wad" to have the rich "soak" from paying a few dollars less tax.

This is not a question for the churches to tackle. It is not a sentimental question. It is a business question—a question for the business people of the nation to clean up as a damnable stinking nuisance. Public sentiment is growing along this line, and in time it will surely clean it out.

Brewster, Wash., Oct. 24.

V. W. CLOUGH

Callender Shoe-scraper

Every House-
keeper will
want one

A glance at the
Illustration
will tell you
why.

Combination Scraper and Brush

Scrapes the mud from the sole of the shoe and cleans the sides at the same time. Every housewife should have one. It will reduce her work in saving the time necessary to clean rugs and floors, which otherwise would be tracked with dust and dirt from the street.

It is made of the finest material; no screws to rust; heavily japanned. Brushes remain stationary. It is so simple that a child can change the brushes.

Every household needs one or more.

Premium Offer: We will send one of these Callender Shoe-scrappers as premium to any reader who sends us TWO NEW subscriptions to GLEANINGS IN BEE CULTURE for six months at the rate of 25 cents each.

Postage on Canadian subscriptions 15 cents additional for each trial subscription for six months.

The A. I. Root Company, Medina, Ohio

A BEEKEEPER who uses cheap shipping-cases for his comb honey isn't necessarily mean. The chances are he's thoughtless. But many grocers or other dealers who receive his honey will not accept this generous view.

Among that number may be the very grocer he wants to influence most—the one who has the best trade in honey in that locality.

So he should use good shipping-cases, such as we make. To use them is economy, not an expense.

For particulars write us or our dealers, or consult our catalog.

EARLY-ORDER CASH DISCOUNTS

Apply Here just as they
do at the Factory

As Southwestern distributors of **ROOT'S BEEKEEPERS' SUPPLIES**, we are very glad to make this first announcement of a special discount for early orders, accompanied by cash, to our beekeeping friends throughout this territory.

We give exactly the same discount that is granted by the manufacturers of these famous goods, and the prices in our special catalog are the same as their own. There is an extra saving for you in ordering from us—**FREIGHT**. Better give this your special attention before ordering from elsewhere.

THE CASH DISCOUNT ON EARLY ORDERS PLACED IN DECEMBER IS 4 PER CENT.

This applies to every thing in the way of beekeepers' supplies except a few special articles. On large general orders we will allow the discount on some of the excepted articles, not exceeding ten to twenty per cent of the entire order.

REMEMBER WE MANUFACTURE THE FAMOUS WEED PROCESS COMB FOUNDATION.

We have a large demand for this product, and are turning out comb foundation of the finest quality. Include what you will need for the opening of next season in your early order. Shipment may be held subject to your convenience if desired; but get your order in now and save 5 per cent.

Toepperwein & Mayfield Co.
San Antonio, Texas

17c a Day

Opens the Way to Better Pay

A few dollars, plus your promise to pay the balance at the rate of 17 cents a day, places in your hands the new "Printype" model Oliver Typewriter No. 5, our very finest production.

The best advice that can be given to the young man or woman is:

Get an Oliver Typewriter!

This offer places at your command a machine that turns time, energy, and enterprise into the pure gold of *success*.

Thousands of ambitious graduates, with the aid of Oliver Typewriters, have won their way to better pay and broader opportunity. This is the age of mechanical writing. The great world of modern business revolves around the typewriter. Typewriter operators are in demand everywhere. Our employment Bureaus in all the important cities are swamped with calls for competent Oliver operators.

Printype OLIVER Typewriter

The Standard Visible Writer

Easy to Pay--17 Cents a Day

You can make the machine meet the payments. You doubtless spend more than this amount every day for trifles you do not need.

Thousands have paid for Oliver Typewriters on this plan without the slightest effort. Are you going to let a matter of pennies stand between you and this money-making machine?

Against *your* risk of a few dollars *we* risk a \$100 typewriter—the same machine that is used by the greatest firms and corporations throughout the world.

Shall we send you full details of the Easy Purchase Plan?

Catalog mailed on request. Address

The Oliver Typewriter Co., 116 Prospect Ave., Cleveland, O.

“Look Beyond the End of Your Nose”

grandfather used to say. A big Florida fruit grower remarked that he had to go to California to learn that he had been wrong for twenty years. So the potato growers of Maine get hints from Colorado; the apple men learn how to coöperate from the orange growers. Here's where the national-farm-weekly idea comes in. If you want to travel north, east, south, west and get your long-distance lessons in money-making methods without spending carfare, look beyond the end of your nose and get the national-farm-weekly habit; in other words, read *The Country Gentleman*.

THE DOUBLE-PROFIT FARMER isn't resting on a one-legged stool. He is setting his crops to his livestock and marketing the stock with a chance to make a profit on both. He is growing apples and eggs, or berries and broilers, on the same land on the double-crop plan. He is selling direct and getting both the producer's and the retailer's profits. He is fitting two or three specialties together to get the insurance of diversified farming, and he is safeguarded against total failure because he has three legs on his stool. Double-profit combinations are the backbone of the small place and they are described in nearly every issue of *The Country Gentleman*.

The marketing end of the farm business—getting the profit—is the keynote of THE COUNTRY GENTLEMAN, the national farm weekly. Five cents the copy, of all newsdealers; \$1.50 the year, by mail.
